

# Contents

<b>1</b>	<b>Some Fundamental Definitions</b>	<b>1</b>
1.1	Luminosity	1
1.2	Flux	2
1.3	Intensity	2
1.4	Emissivity	2
1.5	Radiative Energy Density	2
1.6	How to Go from $L$ to $u$	3
1.6.1	We Are Outside the Source	3
1.6.2	We Are Inside a Uniformly Emitting Source	3
1.6.3	We Are Inside a Uniformly Emitting Shell	4
1.7	How to Go from $I$ to $F$	4
1.7.1	Flux from a Thick Spherical Source	5
1.8	Radiative Transport: Basics	5
1.8.1	The “ $\cos \theta$ Law”	7
1.9	Einstein Coefficients	8
1.9.1	Emissivity, Absorption and Einstein Coefficients	11
1.10	Mean Free Path	11
1.10.1	Random Walk	12
1.11	Thermal and Non-thermal Plasmas	13
1.11.1	Energy Exchange and Thermal Plasmas	14
1.11.2	Non-thermal Plasmas	15
1.12	Coulomb Collisions	15
1.12.1	Cross Section	16
1.13	The Electric Field of a Moving Charge	18
1.13.1	Total Emitted Power: Larmor Formula	20
1.13.2	Pattern	21
<b>2</b>	<b>Bremsstrahlung and Black Body</b>	<b>23</b>
2.1	Bremsstrahlung	23
2.1.1	Free-Free Absorption	25
2.1.2	From Bremsstrahlung to Black Body	26

2.2	Black Body	27
	References	29
<b>3</b>	<b>Beaming</b>	31
3.1	Rulers and Clocks	31
3.2	Photographs and Light Curves	32
3.2.1	The Moving Bar	32
3.2.2	The Moving Square	33
3.2.3	Rotation, Not Contraction	34
3.2.4	Time	35
3.2.5	Aberration	36
3.2.6	Intensity	38
3.2.7	Luminosity and Flux	38
3.2.8	Emissivity	39
3.2.9	Brightness Temperature	41
3.2.10	Moving in a Homogeneous Radiation Field	41
3.3	Superluminal Motion	43
3.4	A Question	45
	References	46
<b>4</b>	<b>Synchrotron Emission and Absorption</b>	47
4.1	Introduction	47
4.2	Total Losses	47
4.2.1	Synchrotron Cooling Time	50
4.3	Spectrum Emitted by the Single Electron	50
4.3.1	Basics	50
4.3.2	The Real Stuff	52
4.3.3	Limits of Validity	53
4.3.4	From Cyclotron to Synchrotron Emission	54
4.4	Emission from Many Electrons	54
4.5	Synchrotron Absorption: Photons	57
4.5.1	From Thick to Thin	58
4.6	Synchrotron Absorption: Electrons	59
Appendix	Useful Formulae	61
A.1	Emissivity	61
A.2	Absorption Coefficient	62
A.3	Specific Intensity	63
A.4	Self-absorption Frequency	63
A.5	Synchrotron Peak	64
	References	64
<b>5</b>	<b>Compton Scattering</b>	65
5.1	Introduction	65
5.2	The Thomson Cross Section	65
5.2.1	Why the Peanut Shape?	66
5.3	Direct Compton Scattering	68
5.4	The Klein–Nishina Cross Section	68

5.4.1	Another Limit . . . . .	70
5.4.2	Pause . . . . .	71
5.5	Inverse Compton Scattering . . . . .	72
5.5.1	Thomson Regime . . . . .	72
5.5.2	Typical Frequencies . . . . .	72
5.5.3	Cooling Time and Compactness . . . . .	76
5.5.4	Single Particle Spectrum . . . . .	77
5.6	Emission from Many Electrons . . . . .	79
5.6.1	Non-monochromatic Seed Photons . . . . .	81
5.7	Thermal Comptonization . . . . .	82
5.7.1	Average Number of Scatterings . . . . .	83
5.7.2	Average Gain per Scattering . . . . .	83
5.7.3	Comptonization Spectra: Basics . . . . .	85
	References . . . . .	88
<b>6</b>	<b>Synchrotron Self-Compton</b> . . . . .	89
6.1	SSC Emissivity . . . . .	89
6.2	Diagnostic . . . . .	90
6.3	Why It Works . . . . .	92
<b>7</b>	<b>Pairs</b> . . . . .	95
7.1	Thermal Pairs . . . . .	96
7.1.1	First Important Result . . . . .	97
7.1.2	Second Important Result . . . . .	98
7.2	Non-thermal Pairs . . . . .	101
7.2.1	Optical Depth and Compactness . . . . .	101
7.2.2	Photon–Photon Absorption . . . . .	103
7.2.3	An Illustrative Case: Saturated Pair Production . . . . .	105
7.2.4	Importance in Astrophysics . . . . .	107
	References . . . . .	109
<b>8</b>	<b>Active Galactic Nuclei</b> . . . . .	111
8.1	Introduction . . . . .	111
8.2	The Discovery . . . . .	112
8.2.1	Maarten Schmidt Discovers the Redshift of 3C 273 . . . . .	112
8.3	Basic Components . . . . .	113
8.4	The Supermassive Black Hole . . . . .	114
8.5	Accretion Disk: Luminosities and Spectra . . . . .	115
8.5.1	Spectrum . . . . .	115
8.6	Emission Lines . . . . .	117
8.6.1	Broad Emission Lines . . . . .	118
8.6.2	Narrow Emission Lines . . . . .	119
8.7	The X-Ray Corona . . . . .	120
8.7.1	The Power Law: Thermal Comptonization . . . . .	121
8.7.2	Compton Reflection . . . . .	122
8.7.3	The Iron Line . . . . .	123

8.8	The Torus and the Seyfert Unification Scheme . . . . .	124
8.8.1	The X-Ray Background . . . . .	127
8.9	The Jet . . . . .	128
8.9.1	Flat and Steep Radio AGNs . . . . .	128
8.9.2	Blazars . . . . .	129
8.9.3	The Power of the Jet . . . . .	135
8.9.4	Lobes as Energy Reservoirs . . . . .	137
8.10	Open Issues . . . . .	138
	References . . . . .	140
