

Contents

1	Introduction	1
1.1	Overview	1
1.2	Background	1
1.3	Aims and Objectives	6
1.4	Methodology and Approach	6
1.5	Outline of the Book	7
	References	8
2	Ultrasonic Sensing Technology	11
2.1	Overview	11
2.2	Principles of Ultrasonic Sensing	11
2.2.1	Overview	11
2.2.2	Ultrasound Waves	11
2.2.3	Sound Velocity	12
2.2.4	Ultrasonic Wave Generation	14
2.2.5	Piezoelectric Effect	14
2.2.6	Characteristics of Ultrasonic Waves	16
2.2.7	Ultrasonic Measurement Principles	18
2.3	Level Measurement Using Ultrasonic Sensors	20
2.4	Ultrasonic Sensor Based Level Measurement in Dynamic Environments	23
2.4.1	Overview	23
2.4.2	Effects of Temperature Variations	24
2.4.3	Electromagnetic Interference	25
2.4.4	Effects of Contaminants and Obstacles	26
2.5	Effects of Liquid Sloshing	27
2.5.1	Overview	27
2.5.2	Slosh Compensation by Dampening Methods	27
2.5.3	Use of Tilt Sensors	28
2.5.4	Averaging Methods	30
2.6	Summary	33
	References	34

3	Ultrasonic Sensor Based Fluid Level Sensing Using	
	Support Vector Machines.	37
3.1	Overview	37
3.2	Signal Processing and Classification	37
3.2.1	Overview	37
3.2.2	Data Collection.	37
3.2.3	Signal Filtration	38
3.2.4	Feature Extraction.	39
3.2.5	Signal Classification Techniques.	42
3.3	Support Vector Machines	44
3.3.1	Overview	44
3.3.2	Two-Class Support Vector Machines.	44
3.3.3	Soft-Margin Support Vector Machines.	47
3.3.4	v-Support Vector Machines	48
3.3.5	Nonlinear Support Vector Machines	49
3.3.6	Kernel Trick.	50
	References	51
4	Methodology and Experimental Program	53
4.1	Overview	53
4.2	Ultrasonics-Based Level Sensing.	53
4.3	Sensor Response Under Slosh Conditions.	54
4.4	Design of Methodology	55
4.5	Feature Selection and Reduction	58
4.6	Signal Smoothing	60
4.7	Influential Factors Analysis	62
	References	63
5	Experimentation	65
5.1	Overview	65
5.2	Methodology.	65
5.3	Data Collection and Processing Methodology	67
5.4	Apparatus and Equipment Used in the Experimental Program. . .	69
5.4.1	Ultrasonic Level Sensor.	69
5.4.2	Fuel Tank	70
5.4.3	Linear Actuator.	71
5.4.4	Heater	72
5.4.5	Arizona Dust	72
5.4.6	Signal Acquisition Card.	72
5.5	Experiment Set A: Study of the Influential Factors	74
5.5.1	Overview	74
5.5.2	Factorial Design	74
5.5.3	Experimental Setup.	75

5.6	Experiment Set B: Kernel Functions Examination	76
5.6.1	Overview	76
5.6.2	Experimental Setup	77
5.6.3	Parameters for the SVM Kernel Functions	78
5.7	Experiment Set C: Performance Estimation Using Filtration . . .	80
5.7.1	Overview	80
5.7.2	RBF Kernel Function	81
5.7.3	Experimental Setup	82
5.8	SVM Data Processing	84
5.8.1	Raw Signal File	86
5.8.2	Signal Representation	86
5.8.3	Filtration	87
5.8.4	Feature Extraction	87
	References	88
6	Results.	89
6.1	Overview	89
6.2	Experiment Set A	89
6.2.1	Main Effects Plot	89
6.2.2	Interaction Plots	91
6.2.3	Summary	91
6.3	Experiment Set B	92
6.3.1	Frequency Coefficients	93
6.3.2	Linear Kernel	94
6.3.3	Polynomial Kernel	94
6.3.4	RBF Kernel	94
6.3.5	Sigmoid Kernel.	94
6.3.6	Summary	95
6.4	Experiment Set C	97
6.4.1	Raw Ultrasonic Sensor Signals	97
6.4.2	Frequency Coefficients	104
6.4.3	C1 Selection of Optimal Preprocessing Parameters	106
6.4.4	C2 Selection of Optimal Signal Smoothing Parameters	108
6.4.5	C3 Final Validation Results	110
6.4.6	Validation Errors for Each Investigated Tank Volume. . .	113
6.4.7	Summary	115
7	Discussion	117
7.1	Overview	117
7.2	Support Vector Machine Configuration	117
7.3	Selection of Signal Preprocessing Parameters	118
7.4	Selection of Signal Smoothing Parameters	120
	References	122

8 Conclusion and Future Work	123
8.1 Conclusion	123
8.2 Future Work	124
Appendix A: Publications	125
Appendix B: Exxsol D-40 Fluid Specification	127
About the Authors.	129

Ultrasonic Fluid Quantity Measurement in Dynamic
Vehicular Applications

A Support Vector Machine Approach

Terzic, J.; Terzic, E.; Nagarajah, R.; Alamgir, M.

2013, XIV, 129 p., Hardcover

ISBN: 978-3-319-00632-1
