1	Introduction	1
1.1	Terms and Definitions	3
	References	4

Part I Biomimetic Light-Harvesting

2	Theory and Literature Survey: Biomimetic Light-Harvesting	7
2.1	Natural Light-Harvesting	7
2.2	Biomimetic Self-Assembly	9
2.2.1	Structure of the Self-Assemblies	13
2.3	Main Characterization Methods	14
2.3.1	Absorption Spectroscopy	14
	References	25
3	Controlling the Self-Assembly of Zinc Porphyrin P2	27
3.1	Structure of the Molecule	27
3.2	Synthesis	28
3.3	Optical Properties	29
3.3.1	Absorption Spectroscopy	29
3.3.2	Fluorescence Spectroscopy	35
3.4	Processing and Morphology of the Aggregates	40
3.4.1	Drop-casting from Dichloromethane (DCM)	41
3.4.2	Precipitation from DCM: <i>n</i> -heptane Mixtures	42
3.4.3	Testing Other Solvents: Dichlorobenzene and Diethyl Ether	43
3.5	Structure of P2 J-Aggregates	45
3.6	Thermal Stability	48
3.7	Control of the Aggregate Morphology	52
3.7.1	Processing Techniques	53
3.7.2	P2 Infiltration into Mesoporous TiO ₂ -Structures	55

3.7.3	<i>n</i> -Heptane Induced Reorganization Within Mesoporous TiO ₂	55
3.7.4	Precipitation Between ZnO Nanorods	58
3.7.5	Drop-casting from DCM Dispersions at Low Temperatures	60
3.7.6	Spraying P2 Aggregates from DCM	62
3.7.7	Reorganization of Amorphous P2 to J-Aggregates on Flat Substrates	63
3.7.8	P2 Reorganization Within Porous TiO ₂ Layers	65
3.8	Cyclic Voltammetry	72
3.9	Dielectrophoresis	75
3.9.1	Dielectrophoretic Deposition on Interdigitated Electrodes	76
3.9.2	Controlling the Aggregate Size by Dielectrophoresis	79
3.9.3	Dielectrophoretic Deposition on Floating Electrodes	81
3.9.4	Photoconductivity	85
3.9.5	Estimation of the Conductivity	85
	References	89
4	Conclusion: Biomimetic Light-Harvesting	91

Part II Application of BLH to Solar Cells

5	Theory and Literature Survey: Application of BLH to Solar Cells	95
5.1	Definition of Anode and Cathode in Solar Cells	95
5.2	Conventional Solar Cells	95
5.2.1	Silicon Solar Cells	96
5.2.2	Thin Film Solar Cells	97
5.3	Multijunction and Concentrator Cells	98
5.4	Hybrid and Organic Solar Cells	98
5.5	Dye Sensitized Solar Cells	100
5.5.1	Conventional Dyes for DSSCs	101
5.5.2	Natural Dyes	103
5.5.3	Porphyrin Sensitizers	103
5.5.4	Dye Aggregates in DSSCs	104
5.6	Solid-State Dye Sensitized Solar Cells	104
5.6.1	Improvement of ss-DSSCs	105
5.6.2	Electrode Materials for ss-DSSCs	107
5.6.3	Hole Transport Material	109
5.7	Solar Cell Characterization	111
	References	113

6	Construction of Solar Cells	117
6.1	Experimental Details	117
6.1.1	Characterization	117
6.1.2	Materials and Sample Preparation	117
6.2	Solar Cell Preparation and Investigation	119
6.2.1	Dye (Aggregate) Sensitized Solar Cells with a Liquid Electrolyte	119
6.2.2	All-Solid-State Solar Cells	120
6.3	New Solar Cell Design	122
6.3.1	Solar Cells with Amorphous P2 Infiltrated into Mesoporous TiO ₂	123
6.3.2	1st ss-DSSC Reference Solar Cell with the Dye N719.	125
6.3.3	2nd N719 Reference ss-DSSC with Intensified Thermal Treatment.	127
6.3.4	3rd N719 Reference ss-DSSCs with Smaller TiO ₂ Particles	130
6.3.5	ALD and Characterization of the TiO ₂ Layers.	133
6.3.6	P2 Aggregate Solar Cells with Treatment in <i>n</i> -heptane	138
	References	142
7	Results and Discussion: Application of BLH to Solar Cells	145
	References	147
8	Conclusion: Application of BLH to Solar Cells	149
9	General Conclusion	153
10	Outlook	157
	Appendix: Literature Survey of Recipes for DSSCs and ss-DSSCs . . .	159
	Curriculum Vitae	163

Biomimetic Dye Aggregate Solar Cells

Marek, P.L.

2013, XX, 163 p. 87 illus., 44 illus. in color., Hardcover

ISBN: 978-3-319-00635-2
