

Contents

1	A Benchmark Approach to Risk Management	1
1.1	A Continuous Market Model	1
1.1.1	Primary Security Accounts	2
1.1.2	Market Price of Risk	2
1.1.3	Black-Scholes Model	3
1.1.4	Portfolios	3
1.2	Best Performing Portfolio as Benchmark	4
1.3	Supermartingale Property and Pricing	6
1.3.1	Benchmarked Portfolios	6
1.3.2	Supermartingale Property	6
1.3.3	Strong Arbitrage	7
1.3.4	Law of the Minimal Price	8
1.3.5	Real World Pricing	8
1.3.6	Risk Neutral Pricing	9
1.4	Benchmarked Risk Minimization	10
1.5	Diversification	18
2	Functionals of Wiener Processes	23
2.1	One-Dimensional Functionals of Wiener Processes	23
2.1.1	Wiener Process	23
2.1.2	Bachelier Model	26
2.1.3	Geometric Brownian Motion	32
2.1.4	Ornstein-Uhlenbeck Process	33
2.1.5	Geometric Ornstein-Uhlenbeck Process	35
2.2	Functionals of Multidimensional Wiener Processes	36
2.2.1	Copulas	36
2.2.2	Multidimensional Wiener Process	39
2.2.3	Transition Density of a Multidimensional Geometric Brownian Motion	40
2.2.4	Transition Density of a Multidimensional OU-Process	41

2.2.5	Transition Density of a Multidimensional Geometric OU-Process	41
2.3	Real World Pricing Under the Black-Scholes Model	42
2.3.1	The Black-Scholes Model	44
2.3.2	Zero Coupon Bonds	45
2.3.3	Forward Contracts	45
2.3.4	Asset-or-Nothing Binaries	46
2.3.5	Bond-or-Nothing Binaries	47
2.3.6	European Options	48
2.3.7	Rebates	48
2.3.8	Barrier Options	50
2.3.9	Lookback Options	54
2.3.10	Asian Options	57
2.3.11	Australian Options	59
2.3.12	Exchange Options	60
2.3.13	American Options	62
3	Functionals of Squared Bessel Processes	65
3.1	One-Dimensional Functionals of Squared Bessel Processes	65
3.1.1	Bessel Processes	69
3.1.2	Square-Root Processes	69
3.1.3	$3/2$ Processes	71
3.1.4	Constant Elasticity of Variance Processes	72
3.2	Functionals of Multidimensional Squared Bessel Processes	73
3.3	Selected Applications to Finance	74
3.3.1	Stylized Minimal Market Model	76
3.3.2	Standard European Options on the Index Under the MMM	79
3.3.3	Rebates and Barrier Options Under the MMM	83
3.3.4	Exchange Options	87
3.3.5	Transformed Constant Elasticity of Variance Model	90
3.3.6	Standard European Options on the Index Under the TCEV Model	91
3.3.7	Rebates and Barrier Options Under the TCEV Model	94
3.3.8	Exchange Options	97
4	Lie Symmetry Group Methods	101
4.1	Motivation for Lie Symmetry Methods for Diffusions	101
4.2	Some Basic Facts of Lie Symmetry Analysis	103
4.2.1	Symmetry Groups of PDEs	103
4.2.2	Lie Groups	104
4.2.3	Lie's Prolongation Algorithm	107
4.3	An Example: The One-Dimensional Black-Scholes PDE	109
4.4	Results on Transforms of Fundamental Solutions	117
4.4.1	Transforms of One-Dimensional Solutions	118

5	Transition Densities via Lie Symmetry Methods	141
5.1	A Motivating Example	141
5.2	Two Cautionary Examples	142
5.3	One-Dimensional Examples	145
5.4	Laplace Transforms of Joint Transition Densities	152
5.5	Bond Pricing in Quadratic Models	155
6	Exact and Almost Exact Simulation	161
6.1	Sampling by Inverse Transform Methods	161
6.2	Computing Conditional Laplace Transforms	163
6.3	Exact Simulation of the Heston Model	166
6.3.1	Simulating V_t	167
6.3.2	Simulating $\int_0^t V_s ds$ Given V_t	167
6.3.3	Generating S_t	169
6.4	Exact Simulation of the 3/2 Model	170
6.4.1	Simulating X_t	171
6.4.2	Simulating $\int_0^t \frac{ds}{X_s}$ Given X_t	171
6.4.3	Simulating S_t	172
6.5	Stochastic Volatility Models with Jumps in the Stock Price	172
6.6	Stochastic Volatility Models with Simultaneous Jumps in the Volatility Process and the Stock Price	174
6.7	Multidimensional Stochastic Volatility Models	175
6.7.1	Matrix Square-Root Processes via Time-Changed Wishart Processes	176
6.7.2	Multidimensional Heston Model with Independent Prices	177
6.7.3	Multidimensional Heston Model with Correlated Prices	179
7	Affine Diffusion Processes on the Euclidean Space	181
7.1	Theoretical Background on Affine Diffusions	182
7.1.1	Definition of Affine Processes	182
7.2	Pricing Using Affine Diffusions	187
7.2.1	Classical Approaches to Pricing in Affine Models	188
7.2.2	Forward-Measure Approach	189
7.2.3	Applying the Fubini Theorem	190
7.3	Pricing Using Affine Diffusions Under the Benchmark Approach	191
7.3.1	Craddock-Lennox-Platen Approach to the One- Dimensional Problem	191
7.3.2	Benchmarked Laplace Transforms	195
7.3.3	Forward Measures Under the Benchmark Approach	197
8	Pricing Using Affine Diffusions	199
8.1	Theoretical Background	199
8.2	One-Dimensional Examples	201
8.2.1	Vasiček Model	201
8.2.2	CIR Model	203
8.3	Fourier Transform Approach	206

8.3.1	Examples of Fourier Decompositions	207
8.4	A Special Class of Payoff Functions	207
8.5	Pricing Using Benchmarked Laplace Transforms	208
8.5.1	Put Options Under the Stylized MMM	208
8.5.2	Derivatives on Realized Variance Under the Stylized MMM	210
8.6	Pricing Under the Forward Measure Using the Benchmark Approach	215
9	Solvable Affine Processes on the Euclidean State Space	219
9.1	A Guided Tour to the Grasselli-Tebaldi Approach	219
9.2	Solvable Affine Processes on the Duffie-Kan State Space	223
9.3	Reducing Admissible Affine Processes to the Normal Form	225
9.4	A First Example: The Balduzzi, Das, Foresi and Sundaram Model	228
9.5	A Second Example: The Heston Model	231
9.6	A Quadratic Term Structure Model	235
9.7	A Multifactor Heston Model	239
10	An Introduction to Matrix Variate Stochastics	243
10.1	Basic Definitions and Functions	243
10.2	Integrals over Matrix Domains	244
10.3	Matrix Valued Random Variables	247
10.4	Matrix Valued Stochastic Processes	250
10.5	Matrix Valued Stochastic Differential Equations	253
10.6	Matrix Valued Ornstein-Uhlenbeck Processes	255
10.7	A Two-Dimensional Correlated Minimal Market Model	256
11	Wishart Processes	261
11.1	Definition and Existence Results	261
11.2	Some Special Cases	262
11.3	Exact and Almost Exact Simulation Schemes for Wishart Processes	269
11.3.1	Change of Measure Approach	269
11.3.2	An Exact Simulation Method	271
11.3.3	A Remarkable Splitting Property	275
11.3.4	Exact Simulation for Wishart Processes	277
11.4	Affine Transforms of the Wishart Process	281
11.4.1	Linearization Applied to Wishart Processes	283
11.4.2	Cameron-Martin Formula	286
11.4.3	A Comparison of the Two Approaches	289
11.5	Two Heston Multifactor Volatility Models	290
11.5.1	A Single Asset Heston Multifactor Volatility Model	290
11.5.2	A Heston Multi-asset Multifactor Volatility Model	294
12	Monte Carlo and Quasi-Monte Carlo Methods	299
12.1	Monte Carlo Methods	299
12.1.1	Monte Carlo Methods	300
12.1.2	Bias and Computational Complexity	301
12.1.3	Exact Simulation Methods for Diffusions	304

12.1.4	Multilevel Methods	308
12.2	Quasi-Monte Carlo Methods	311
12.2.1	The Digital Construction Scheme	311
12.2.2	Owen's Scrambling Algorithm	313
12.2.3	Numerical Integration Using Scrambled Digital Nets	313
12.2.4	Multilevel Quasi-Monte Carlo Methods	314
12.3	Applications Under the Benchmark Approach	314
12.4	Numerical Results	317
12.4.1	Almost Exact Simulation for Functionals of Realized Variance	317
12.4.2	Numerical Results for Put Options on Realized Variance	319
12.4.3	Numerical Results for Put Options on Volatility	321
13	Computational Tools	323
13.1	Some Identities Related to the Non-central Chi-Squared Distribution	323
13.2	Computing the Non-central Chi-Squared Distribution	326
13.3	The Doubly Non-central Beta Distribution	329
13.4	Computing the Doubly Non-central Beta Distribution	334
13.5	Inverting Laplace Transforms	339
13.5.1	Recovering the Joint Distribution to Price Realized Variance	340
14	Credit Risk Under the Benchmark Approach	343
14.1	An Affine Credit Risk Model	343
14.2	Pricing Credit Default Swaps Under the Benchmark Approach	350
14.3	Credit Valuation Adjustment Under the Benchmark Approach	353
14.4	CVA for Commodities	357
14.5	A Reduced-Form Model	359
15	Continuous Stochastic Processes	363
15.1	Stochastic Processes	363
15.1.1	Stochastic Process	363
15.1.2	Filtration as Information Structure	364
15.1.3	Conditional Expectations	364
15.1.4	Wiener Process	366
15.2	Supermartingales and Martingales	367
15.2.1	Martingales	367
15.2.2	Super- and Submartingales	368
15.2.3	Stopping Times	368
15.3	Quadratic Variation and Covariation	370
15.3.1	Quadratic Variation	370
15.3.2	Covariation	371
15.3.3	Local Martingales	371
15.3.4	Identification of Martingales as Wiener Processes	372
15.4	Itô Integral	372
15.4.1	Some Properties of Itô Integrals	373
15.5	Itô Formula	375

15.5.1	One-Dimensional Continuous Itô Formula	375
15.5.2	Multidimensional Continuous Itô Formula	375
15.6	Stochastic Differential Equations	376
15.6.1	Feedback in Stochastic Dynamics	376
15.6.2	Solution of Continuous SDEs	377
15.6.3	Continuous Vector SDEs	377
15.7	Existence and Uniqueness of Solutions of SDEs	378
15.7.1	Strong Solution	378
15.7.2	Existence and Uniqueness Theorem	379
15.8	Functionals of Solutions of SDEs	380
15.8.1	SDE for Some Factor Process	380
15.8.2	Terminal Payoff	381
15.8.3	Discounted Payoff	381
15.8.4	Terminal Payoff and Payoff Rate	382
15.8.5	Payoff with First Exit Time	382
15.8.6	Generalized Feynman-Kac Formula	383
15.8.7	Kolmogorov Equations	385
15.8.8	Change of Probability Measure	386
15.8.9	Bayes Rule	386
15.8.10	Girsanov Transformation	387
16	Time-Homogeneous Scalar Diffusions	389
16.1	Basic Definitions	389
16.2	Boundary Classification	390
16.3	Laplace Transform Identities	391
17	Detecting Strict Local Martingales	397
17.1	Sin's Argument	398
17.2	Multidimensional Extension	402
	References	405
