

Contents

1	Introduction	1
1.1	Strong Interaction and Quantum Chromodynamics	1
1.2	Quark-Gluon Plasma and Chiral Symmetry	3
1.3	Chiral Magnetic Effect and Local Parity Violation	5
1.4	Anisotropic Flow and Three-Particle Correlator	8
	References	10
2	Experiment	11
2.1	Relativistic Heavy Ion Collider	11
2.2	STAR Experiment	12
2.2.1	Time Projection Chamber	13
2.2.2	Zero Degree Calorimeters	16
2.2.3	Event Triggering	17
2.2.4	Centrality Definition	17
	References	19
3	Data Analysis	21
3.1	Charge Multiplicity Asymmetry Observables	21
3.1.1	Charge Multiplicity Asymmetries	21
3.1.2	Charge Multiplicity Asymmetry Correlations	22
3.1.3	Dynamical Correlation and Charge Separation	23
3.1.4	Wedge Size and Wedge Location	24
3.2	Data Sets	26
3.3	Quality Cuts	26
3.3.1	Event Selection	27
3.3.2	Track Selection	27
3.4	Detector Efficiency Correction	27
3.5	Event Plane Reconstruction	31
3.5.1	Second Order Event Plane Reconstruction from TPC	31
3.5.2	First Order Event Plane from ZDC-SMD	36
3.6	Self-Correlation	40
3.7	Statistical Fluctuation and Detector Effect	43

3.8	Consistency Check	46
3.9	Systematic Uncertainties	48
3.9.1	Sanity Checks	48
3.9.2	Analysis Cut Variations	50
	References	56
4	Results and Discissions	57
4.1	Charge Asymmetry Correlations	57
4.2	Charge Asymmetry p_T Dependence	63
4.3	Event-by-Event Anisotropy (v_2^{obs}) Dependence	65
4.4	Wedge Size and Location Dependence	72
4.5	Discussion	75
4.5.1	Connection to Three-Particle Correlators	75
4.5.2	Interpretation of Charge Asymmetry Correlations	79
4.5.3	In-Plane or Out-of-Plane?	81
4.5.4	Signal or Background?	82
	References	92
5	Summary	95
A	Appendix	99

Charge Multiplicity Asymmetry Correlation Study
Searching for Local Parity Violation at RHIC for STAR
Collaboration

Wang, Q.

2013, XXI, 134 p. 77 illus., 72 illus. in color., Hardcover

ISBN: 978-3-319-00755-7
