

# Contents

<b>1</b>	<b>Introduction and Summary</b>	<b>1</b>
1.1	Stochastic Control Problems and Games	1
1.1.1	Optimal Control Problems	1
1.1.2	Stochastic Games	2
1.1.3	A Dynamic Potential Game	3
1.2	Related Literature	4
1.2.1	Dynamic Programming and the Lagrange Method	4
1.2.2	Static Potential Games	8
1.3	Summary of the Following Chapters	10
<b>2</b>	<b>Direct Problem: The Euler Equation Approach</b>	<b>11</b>
2.1	Introduction	11
2.2	Deterministic Control Problems	13
2.2.1	The Deterministic Control Model	14
2.2.2	Necessary Conditions	15
2.2.3	Sufficient Conditions	18
2.3	Solving Optimal Control Problems	20
2.3.1	The Brock and Mirman Model	20
2.3.2	An Optimal Growth Model with Linear Production	22
2.3.3	A Consumption–Investment Problem	23
2.3.4	The Great Fish War of Levhari and Mirman	24
2.3.5	The Discounted $LQ$ Problem	26
2.3.6	On the Assumptions	29
2.4	Extension to Stochastic Control Problems	31
<b>3</b>	<b>The Inverse Optimal Control Problem</b>	<b>35</b>
3.1	Introduction	35
3.2	The Stochastic Inverse Problem	36
3.3	Main Results	37
3.4	An Application	41
3.5	The Nonstationary Case	46

<b>4</b>	<b>Dynamic Games</b> .....	49
4.1	Introduction: Markov and Open-Loop Nash Equilibria .....	49
4.2	The Euler Equation Approach .....	50
4.3	Two Classes of Dynamic Potential Games .....	54
4.3.1	Stochastic Dynamic Potential Games via Inverse Problems .....	54
4.3.2	The Stochastic Lake Game as a Dynamic Potential Game ..	58
4.3.3	A Subclass of Games for Which a Pareto Solution Is Also an Open-Loop Nash Equilibrium .....	59
<b>5</b>	<b>Conclusions and Suggestions for Future Research</b> .....	61
	<b>References</b> .....	65
	<b>Index</b> .....	69

Discrete-Time Stochastic Control and Dynamic Potential  
Games

The Euler-Equation Approach

González-Sánchez, D.; Hernandez-Lerma, O.

2013, XIV, 69 p., Softcover

ISBN: 978-3-319-01058-8
