1	Introduction	1
1.1	Virtualization as a Concept	1
1.2	Motivation for Wireless Virtualization	2
1.3	Structure of the Book	3
	References	4
2	Network Virtualization: Overview	5
2.1	From Server Virtualization to Network Virtualization	5
2.2	Network Virtualization: Diverse Perspectives	6
2.3	Definition of Network Virtualization	8
	References	10
3	Network and Infrastructure Virtualization Architectures	11
3.1	Global Environment for Network Innovations	12
3.1.1	Basic Description of GENI	12
3.1.2	GENI Conceptual Design	13
3.2	PlanetLab	14
3.2.1	Distributed Virtualization	14
3.2.2	PlanetLab Architecture	15
3.3	European Initiatives in Network Virtualization	16
3.4	Smart Application on Virtual Infrastructure	17
3.4.1	Virtualized Application Networking Infrastructure	17
3.4.2	SAVI Architecture Model	19
3.5	Project AKARI	20
3.5.1	Alternative Virtualization Meta-Architectures	21
3.5.2	General Considerations for Virtualization	22
3.5.3	Virtual Nodes Network Virtualization Project	22
	References	23
4	Network Virtualization Technologies and Techniques	25
4.1	OpenFlow and Software-Defined Networking	25
4.1.1	Basic Overview of the OpenFlow Protocol	26
4.1.2	Basic Overview of OpenFlow Controllers	27

4.1.3	Basic Overview of OpenFlow Virtualization	28
4.1.4	OpenFlow Wireless (OpenRoads)	29
4.1.5	OpenFlow and Other SDN and Virtualization Technologies	31
4.2	Software-Defined Networking in Wireless Networks	32
4.2.1	Control and Provisioning of Wireless Access Points	32
4.2.2	Wireless Network Virtualization with CloudMAC and OpenFlow	34
4.3	Network Interface Device Virtualization	36
4.3.1	Basic Overview of Single-Root I/O Virtualization.	36
4.3.2	Virtualized Network Interface Cards Using Crossbow	37
	References	39
5	Wireless Virtualization	41
5.1	Different Aspects of Wireless Virtualization	42
5.1.1	Scope and Depth of Virtualization	42
5.1.2	Virtualization in Different Wireless Technologies	43
5.1.3	Infrastructure-Side and Client-Side Virtualization.	44
5.2	Multiple Access Techniques and Wireless Virtualization.	44
5.2.1	Slicing, Sharing and Flexibility in Wireless Virtualization	45
5.2.2	Comparison of Multiple Access Techniques	46
5.3	General Architecture for Wireless Virtualization	47
5.3.1	Wireless Virtualization as Mobile Network Virtualization	47
5.3.2	Configurable Radio Networks	49
5.4	Example Applications of Wireless Virtualization.	50
5.4.1	Cloud-Centric Architecture for Rich Mobile Networking	51
5.4.2	User-Centric Architecture for Coordinated Multi-Point	52
5.5	Virtualization in Cellular Networks	54
5.5.1	WiMAX Virtualization: Virtual Base Transceiver Station Architecture	54
5.5.2	WiMAX Virtualization: Virtual Network Traffic Shaper	56
5.5.3	WiMAX Virtualization: Network Virtualization Substrate	57
5.5.4	LTE Evolved Node B Virtualization.	59
5.6	Virtualization in 802.11 Wireless Local Area Networks	61
5.6.1	SplitAP Architecture	62
5.6.2	Wireless Local Area Network Client Interface Virtualization	64
5.6.3	802.11 PSM and PCF Virtualization for Mesh Network	66
5.6.4	MAC Layer Abstraction in Carrier-Grade Mesh Networks.	68

5.7	Virtualization and Software-Defined Radio	70
5.7.1	Software Radio and Multi-Purpose Access Point.	70
5.7.2	OpenRadio Programmable Wireless Dataplane	73
5.8	Virtualization by Spectrum and Radio Frontend Slicing	75
5.8.1	Spectrum Virtualization Layer	75
5.8.2	Spectrum Slicing with Picasso	77
	References	79
6	Framework for Wireless Virtualization	83
6.1	Perspectives in Infrastructure Virtualization	83
6.1.1	Testbed, Host and Network Virtualization Domains	84
6.1.2	Wireless Virtualization Perspectives	87
6.1.3	Coexistence of Different Virtualization Domains	89
6.2	Towards a Generic Wireless Virtualization Framework	92
6.2.1	A Hypothetical Virtualized Infrastructure	92
6.2.2	Challenges of Wireless Virtualization	95
6.2.3	Requirements of a Generic Wireless Virtualization Framework.	97
6.3	Multi-Dimensional Virtualization Framework for Wireless Access Networks	99
6.3.1	Control and Management Layer	99
6.3.2	Virtualization Layer	104
6.3.3	Applying the Framework in Modern Wireless Technologies	108
