
Contents

1	Short review of Probability and of Stochastic Processes	1
1.1	Review of Theory	1
1.2	Solved Exercises	5
1.3	Proposed Exercises	14
2	Portfolio Optimization in Discrete-Time Models	17
2.1	Review of Theory	17
2.2	Solved Exercises	20
2.3	Proposed Exercises	29
3	Binomial Model for Option Pricing	31
3.1	Review of Theory	31
3.2	Solved Exercises	35
3.3	Proposed Exercises	60
4	Absence of Arbitrage and Completeness of Market Models	61
4.1	Review of Theory	61
4.2	Solved Exercises	65
4.3	Proposed Exercises	82
5	Itô's Formula and Stochastic Differential Equations	85
5.1	Review of Theory	85
5.2	Solved Exercises	88
5.3	Proposed Exercises	98
6	Partial Differential Equations in Finance	101
6.1	Review of Theory	101
6.2	Solved Exercises	104
6.3	Proposed Exercises	122

7	Black-Scholes Model for Option Pricing and Hedging Strategies	123
7.1	Review of Theory	123
7.2	Solved Exercises	128
7.3	Proposed Exercises	151
8	American Options	153
8.1	Review of Theory	153
8.2	Solved Exercises	154
8.3	Proposed Exercises	171
9	Exotic Options	173
9.1	Review of Theory	173
9.2	Solved Exercises	177
9.3	Proposed Exercises	198
10	Interest Rate Models	201
10.1	Review of Theory	201
10.2	Solved Exercises	207
10.3	Proposed Exercises	230
11	Pricing Models beyond Black-Scholes	233
11.1	Review of Theory	233
11.2	Solved Exercises	236
11.3	Proposed Exercises	245
12	Risk Measures: Value at Risk and beyond	247
12.1	Review of Theory	247
12.2	Solved Exercises	250
12.3	Proposed Exercises	268
	References	273
	Index	275

Mathematical Finance: Theory Review and Exercises
From Binomial Model to Risk Measures

Rosazza Gianin, E.; Sgarra, C.

2013, X, 277 p., Softcover

ISBN: 978-3-319-01356-5
