

Contents

1	Introduction	1
1.1	Intracellular Protein Degradation and Antigen Presentation	1
1.2	The Ubiquitin–Proteasome System	2
1.2.1	Polyubiquitylation: A Signal for Degradation	2
1.2.2	Subunit Composition and Architecture of Proteasomes	2
1.2.3	Proteolysis by 20S Proteasomes	5
1.2.4	Immune Functions of 20S Proteasomes	7
1.3	20S Proteasomes: Validated and Emerging Drug Targets	8
1.4	Types of Proteasome Inhibitors	9
1.5	Clinically Relevant Proteasome Inhibitors	10
1.6	Subunit-Specific Proteasome Inhibitors and Their Therapeutic Potential	11
	References	13
2	Objective	19
3	Materials and Methods	21
3.1	Materials	21
3.1.1	Chemicals	21
3.1.2	Antibiotics	21
3.1.3	Media	21
3.1.4	Enzymes	22
3.1.5	Primer	22
3.1.6	Strains	23
3.1.7	Plasmids	23
3.1.8	Fluorogenic Substrates	24
3.1.9	DNA and Protein Standards	24
3.1.10	Instruments	25
3.1.11	Computer Software and Bioinformatics Tools	27
3.2	Genetic Methods	28
3.2.1	Cultivation and Long-Term Storage of <i>Escherichia coli</i>	28

3.2.2	Cultivation and Long-Term Storage of <i>Saccharomyces cerevisiae</i>	28
3.2.3	Polymerase Chain Reaction	28
3.2.4	Site-Directed Mutagenesis	29
3.2.5	Agarose Gel Electrophoresis	30
3.2.6	Isolation of Plasmid DNA from <i>E. coli</i>	30
3.2.7	Purification of DNA	30
3.2.8	Restriction Digest of DNA	31
3.2.9	Determination of DNA Concentration	31
3.2.10	Ligation of DNA Fragments.	31
3.2.11	Transformation of <i>E. coli</i> by Electroporation.	32
3.2.12	Transformation of <i>S. cerevisiae</i>	32
3.2.13	Plasmid Shuffling	33
3.2.14	DNA Isolation from <i>S. cerevisiae</i>	33
3.2.15	DNA Sequencing	33
3.3	Protein Chemistry and Analytics	34
3.3.1	Purification of the Yeast 20S Proteasome	34
3.3.2	Purification of the Murine Immuno- and Constitutive 20S Proteasome	34
3.3.3	SDS Polyacrylamide Gel Electrophoresis	35
3.3.4	Determination of Protein Concentration	35
3.4	Proteasome Activity Tests	36
3.4.1	Overlay Assay.	36
3.4.2	Fluorescence Activity Test and Determination of IC ₅₀ Values	36
3.5	Protein Crystallography	37
3.5.1	Crystallization of the Yeast 20S Proteasome	37
3.5.2	Crystallization of the Murine 20S Proteasomes	37
3.5.3	Data Collection, Processing and Structure Determination	37
	References	38
4	Results	41
4.1	Sequence Alignments	41
4.2	X-Ray Structures of the Mouse 20S Immuno- and Constitutive Proteasome	41
4.2.1	Crystallization and Structure Determination	41
4.2.2	Subunit Architecture of the cCP and iCP	44
4.2.3	Structural Analysis of the Substrate Binding Channels	48
4.3	Investigations on the β 5i-Selective Proteasome Inhibitor ONX 0914	50
4.3.1	Inhibition of 20S Proteasomes by ONX 0914	50
4.3.2	Proteasome Core Particles in Complex with ONX 0914	51
4.3.3	Molecular Basis for the Subunit Selectivity of ONX 0914	52

4.3.4	Structural Analysis of the Epoxyketone Reaction Mechanism	56
4.4	Yeast Mutagenesis Studies on the Subunits $\beta 5c$, $\beta 5i$ and $\beta 5t$	60
4.4.1	Mimicking the $\beta 5c$ Active Site.	60
4.4.2	Analysis of the $\beta 5i$ Substrate Binding Channel	63
4.4.3	Probing Subunit $\beta 5t$	67
	References	68
5	Discussion.	71
5.1	Structural and Functional Differences Between the Three Types of CPs.	71
5.2	Guidelines for the Rational Design of CP-selective Inhibitors	73
	References	75
	Appendix	77

Structural and Functional Characterization of the
Immunoproteasome

Huber, E.M.

2013, XIX, 82 p. 33 illus., 29 illus. in color., Hardcover

ISBN: 978-3-319-01555-2
