1	Introduction	1
1.1	Power System Stability	1
1.1.1	Stability Issues	2
1.1.2	Power System Oscillations	2
1.1.3	Wide Area Measurement Systems	5
1.2	HVDC Development	6
1.2.1	HVDC Technology	6
1.2.2	LCC-HVDC	7
1.2.3	VSC-HVDC	7
1.2.4	Offshore Development	8
1.2.5	Future HVDC Systems	9
1.3	Past Research on Damping of Power Oscillations	10
1.3.1	Power Oscillation Damping Control	10
1.3.2	Probabilistic Small-Disturbance Stability Assessment	17
1.3.3	Summary of Past Research	19
1.4	Research Aims and Objectives	20
1.5	Main Contributions of this Research	21
1.6	Thesis Overview	22
	References	23
2	Power System Modelling and Analysis Techniques	31
2.1	Modelling Power System Components	31
2.1.1	Synchronous Generators	32
2.1.2	Generator Excitation Systems	33
2.1.3	Power System Stabilisers	35
2.1.4	Transmission Lines	36
2.1.5	Transformers	36
2.1.6	Loads	37
2.1.7	Network	37
2.1.8	Modelling of Signal Time Delays	38
2.2	Modelling HVDC Systems	39
2.2.1	HVDC Converters	39
2.2.2	LCC-HVDC Modelling	40
2.2.3	VSC-HVDC Modelling	42

2.2.4	Interface with AC System	44
2.2.5	Multi-Terminal HVDC Grid Modelling	44
2.2.6	HVDC Model Summaries	46
2.3	Power System Analysis Techniques	49
2.3.1	Power System Linearisation	49
2.3.2	Modal Analysis.	50
2.4	Damping Controller Design	52
2.4.1	PSS-Based POD Control	53
2.4.2	Modal Linear Quadratic Gaussian Control	53
2.5	Test Networks.	57
2.5.1	Two Area Network	57
2.5.2	New England Test System and New York Power System.	58
2.6	Summary	59
	References	59
3	The Effects of HVDC Lines on Power System Stability	63
3.1	Introduction of HVDC Lines into AC Networks	64
3.1.1	Modifications to the Test Network	64
3.1.2	HVDC Line Power Flow Variations	65
3.1.3	Results and Discussion	65
3.2	VSC-HVDC POD Control on a Small Test System	69
3.2.1	Modifications to the Test Network	69
3.2.2	POD Controller Designs	70
3.2.3	Small-Disturbance Analysis	71
3.2.4	Large Disturbance Analysis	72
3.3	VSC-HVDC POD Control on a Large Test System	75
3.3.1	Modifications to the Test Network	75
3.3.2	POD Controller Designs	76
3.3.3	Small-Disturbance Analysis	78
3.3.4	Large Disturbance Analysis	78
3.3.5	Wide Area Signal Delay	83
3.3.6	Loss of Wide Area Signals.	84
3.3.7	Effect of Reactive Power Modulation	85
3.3.8	Limiting Modulation Capacity	86
3.4	POD Control with Multi-Terminal HVDC Grids	88
3.4.1	Modifications to the Test Network	89
3.4.2	WAMS-Based POD Control.	89
3.4.3	Large Disturbance Analysis	90
3.4.4	Blocking Modulating Signals	93
3.5	Summary	94
	References	95

4	Assessing the Robustness of Controllers	97
4.1	Robust Probabilistic Evaluation of Controller Performance.	98
4.1.1	Establishing the Probabilistic Operating Conditions.	98
4.1.2	Modelling Contingencies	99
4.1.3	Identification of Critical Oscillatory Modes	100
4.2	Test System Details	100
4.2.1	Modifications to the Test Network	100
4.2.2	WAMS-Based POD Control	101
4.3	Evaluation of Controller Robustness	106
4.3.1	Establishing the Probabilistic Operating Conditions.	106
4.3.2	Uncertain Parameter Reduction.	106
4.3.3	Modelling Contingencies	107
4.4	Results and Discussion.	108
4.4.1	Comparison of Controller Designs	108
4.4.2	Mitigating for Inadequate Controller Performance.	109
4.4.3	Predicting Inadequate Performance with Multiple System Variables	112
4.5	Summary	115
	References	116
5	Modal Estimation Using the Probabilistic Collocation Method.	117
5.1	The Probabilistic Collocation Method	118
5.1.1	The PCM Model Function	119
5.1.2	Selection of Probabilistic Operating Points.	120
5.1.3	Using the PCM Model Function	121
5.2	Case Study on a Small Test Network.	121
5.2.1	Modifications to the Test Network	121
5.2.2	Application of the PCM with Test System.	122
5.2.3	Errors of the Produced PCM Models.	124
5.2.4	Results and Discussion	125
5.2.5	Incorporating POD Control	129
5.3	Reduction in Modelled Uncertainties	131
5.3.1	Eigenvalue Sensitivity	131
5.3.2	The Effect of Parameter Reduction on Model Error	132
5.3.3	Results and Discussion	133
5.4	Case Study on Large Test Network	134
5.4.1	Modifications to the Test Network	134
5.4.2	Uncertain Network Parameters	134
5.4.3	Reduced System Uncertainties	135
5.4.4	Results and Discussion	135
5.4.5	Inclusion of Optimal Power Flow	136
5.5	Summary	138
	References	139

6	Probabilistic Tuning of Damping Controllers	141
6.1	Probabilistic Controller Tuning Methodology	142
6.1.1	Determining Probabilistic Mode Locations	142
6.1.2	Probabilistic System Representation	143
6.2	Test System Details	143
6.2.1	Modifications to the Test Network	143
6.2.2	WAMS-Based POD Control	145
6.3	Application of Probabilistic Controller Tuning	147
6.3.1	Variation in System Operating Conditions	148
6.3.2	Identification of Electromechanical Modes	148
6.3.3	Results and Discussions	149
6.4	Application of the Probabilistic Collocation Method	152
6.4.1	Reduction in Modelled Uncertainties	153
6.4.2	Discontinuities in Wind Farm Power Output	154
6.4.3	PCM-Based Probabilistic Modal Estimation	154
6.4.4	Results and Discussions	155
6.5	Summary	158
