Part I Mathematical and Probabilistic Tools

1	Preliminaries	3
1.1	Sobolev Spaces	3
1.2	Fourier Analysis	5
1.2.1	Fourier Transform	5
1.2.2	Shannon's Sampling Theorem	7
1.2.3	Fast Fourier Transform	8
1.3	Special Functions	10
1.3.1	Bessel Functions	10
1.3.2	Prolate Spheroidal Functions	15
1.3.3	Airy Function	16
1.4	The Moore-Penrose Generalized Inverse	17
1.5	Singular Value Decomposition	17
1.6	Compact Operators	19
1.7	Regularization of Ill-Posed Problems	20
1.7.1	Stability	20
1.7.2	The Truncated SVD	22
1.7.3	Tikhonov-Phillips Regularization	22
1.7.4	Regularization by Truncated Iterative Methods	24
1.8	Introduction to Probability Theory	26
1.8.1	Random Variables	26
1.8.2	Random Vectors	27
1.8.3	Gaussian Random Vectors	30
1.8.4	Random Processes	32
1.8.5	Stationary Random Processes	33
1.8.6	Stationary Gaussian Random Processes	37
1.9	Random Matrix Theory	38
1.9.1	Asymptotic Distribution of Eigenvalues of the Invariant Ensembles	38
1.9.2	SVD of a Gaussian Random Matrix	43

1.10	Kalman and Extended Kalman Filters.....	45
1.10.1	Kalman Filter	45
1.10.2	Extended Kalman Filter	47
1.11	General Image Characteristics	48
1.11.1	Spatial Resolution	48
1.11.2	Signal-To-Noise Ratio	49
2	Layer Potential Techniques	51
2.1	The Laplace Equation	52
2.1.1	Fundamental Solution	52
2.1.2	Layer Potentials	55
2.1.3	Invertibility of $\lambda I - \mathcal{K}_D^*$	64
2.1.4	Symmetrization of \mathcal{K}_D^*	66
2.1.5	Neumann Function	68
2.1.6	Transmission Problem.....	72
2.2	Helmholtz Equation	75
2.2.1	Fundamental Solution	76
2.2.2	Layer Potentials	78
2.2.3	Transmission Problem.....	80
2.2.4	Reciprocity	86
2.2.5	The Helmholtz-Kirchhoff Theorem.....	87
2.2.6	Geometric Optics	89
2.3	Cluttered Medium	92
2.4	Wave Equation.....	93
 Part II Small Volume Expansions and Concept of Generalized Polarization Tensors		
3	Small Volume Expansions.....	97
3.1	Conductivity Problem	98
3.1.1	Formal Derivations	99
3.1.2	Polarization Tensor	101
3.2	Polarization Tensor of Multiple Inclusions.....	103
3.2.1	Definition.....	103
3.2.2	Representation by Equivalent Ellipses	105
3.3	Helmholtz Equation	106
3.3.1	Formal Derivations	107
3.4	Asymptotic Formulas in the Time-Domain	109
3.5	Asymptotic Formulas for Dipole Sources in Free Space	110
3.5.1	Conductivity Problem	110
3.5.2	Helmholtz Equation	110
3.5.3	Wave Equation.....	111

4	Generalized Polarization Tensors	115
4.1	Definition and Basic Properties of the GPTs.....	115
4.2	Translation, Rotation, and Scaling Properties of the GPTs	118
4.2.1	Translation	118
4.2.2	Rotation	119
4.2.3	Scaling	120
4.3	GPTs of Multiple Inclusions	121
4.4	Shape Derivative of the GPTs	121
4.5	Stability and Resolution Analysis in the Linearized Case ...	122
4.5.1	Complex Contracted GPTs	122
4.5.2	Resolution and Stability Analysis	123
4.6	GPTs Matching Approach	126
4.6.1	Minimization Algorithm	126
4.6.2	Level-Set Framework	128
4.7	Multipolar Asymptotic Expansions	130
5	Frequency Dependent Generalized Polarization Tensors	133
5.1	Definition	133
5.2	Multipolar Asymptotic Expansions	135
5.3	Scattering Coefficients	136
5.3.1	Definition.....	136
5.3.2	Translation and Rotation Properties of the Scattering Coefficients	139
5.3.3	Shape Derivative of Scattering Coefficients.....	141
 Part III Multistatic Configuration		
6	Multistatic Response Matrix: Statistical Structure	145
6.1	Hadamard Technique	145
6.2	SVD of Multistatic Response Matrices.....	147
6.2.1	Point Reflectors	148
6.2.2	Inclusions.....	155
6.3	Two Useful Lemmas	160
7	MSR Matrices Using Multipolar Expansions	163
7.1	Conductivity Problem	163
7.1.1	Expansion for MSR using Real Contracted GPTs.....	164
7.2	Helmholtz Equation	166
7.3	Continuum Approximation	168

Part IV Localization and Detection Algorithms

8	Direct Imaging Functionals for Inclusions in the Continuum Approximation	173
8.1	Direct Imaging for the Conductivity Problem	174
8.1.1	Detection of a Single Inclusion: A Projection-Type Algorithm	174
8.1.2	Detection of Multiple Inclusions: A MUSIC-Type Algorithm	175
8.1.3	Detection of Multiple Inclusions: A Topological Derivative Based Algorithm	176
8.2	Direct Imaging Algorithms for the Helmholtz Equation at a Fixed Frequency	177
8.2.1	MUSIC-Type Algorithm	178
8.2.2	Backpropagation-Type Algorithms	179
8.2.3	Topological Derivative Based Imaging Functional	182
8.3	Direct Imaging for the Helmholtz Equation at Multiple Frequencies	185
9	Detection and Imaging from MSR Measurements	189
9.1	Point Reflectors	189
9.1.1	Linearized Inversion	190
9.1.2	Point Reflectors: Kirchhoff Migration	190
9.1.3	Detection Test	193
9.1.4	Localization and Reconstruction	197
9.2	Inclusions	199

Part V Dictionary Matching and Tracking Algorithms

10	Reconstruction of GPTs from MSR Measurements	205
10.1	Least-Squares Formulation	205
10.2	Analytical Formula in the Circular Setting	206
10.3	Measurement Noise and Stability Analysis	207
11	Target Identification and Tracking	211
11.1	Complex CGPTs Under Rigid Motions and Scaling	211
11.1.1	Some Properties of the Complex CGPTs	215
11.2	Shape Identification by the CGPTs	216
11.2.1	CGPTs Matching	217
11.2.2	Transform Invariant Shape Descriptors	219
11.3	Target Tracking	220
11.3.1	Location and Orientation Tracking of a Mobile Target	221
11.3.2	Tracking by the Extended Kalman Filter	223

Part VI Imaging of Extended Targets

12 Time-Reversal and Diffraction Tomography for Inverse Source Problems	229
12.1 Time-Reversal Techniques	229
12.1.1 Ideal Time-Reversal Imaging Technique	230
12.1.2 A Modified Time-Reversal Imaging Technique	233
12.2 Diffraction Tomography Within the Born Approximation	235
12.2.1 Born Approximation	235
12.2.2 Diffraction Tomography Algorithm	236
13 Imaging Small Shape Deformations of an Extended Target from MSR Measurements	239
13.1 Asymptotic Expansion of the MSR Matrix	239
13.2 Direct Reconstructions	241
13.3 The Born Approximation	244
13.3.1 Asymptotic Formulation of the Response Matrix	244
13.3.2 The Unperturbed Domain	246
13.3.3 The Perturbed Domain	246
13.4 Resolution and Stability Analysis of the Imaging Functionals	247
13.4.1 First Reconstruction Formula	248
13.4.2 The Second Reconstruction Formula	250
13.4.3 The Third Reconstruction Functional	251
14 Nonlinear Optimization Algorithms	253
14.1 Optimal Control	253
14.2 Resolution Analysis in the High-Frequency Regime	254
14.2.1 The Unperturbed Domain	255
14.2.2 The Perturbed Domain	256
14.3 Construction of an Initial Guess	258
14.3.1 Measurements at a Single Frequency	258
14.3.2 Optimality	259
14.3.3 Measurements at Multiple Frequencies	263
14.4 A General Remark on Least-Squares Imaging and Bayesian Approach	264

Part VII Invisibility

15 GPT- and S-Vanishing Structures for Near-Cloaking	269
15.1 Near-Cloaking for the Conductivity Equation	271
15.2 Near-Cloaking for the Helmholtz Equation	274
15.2.1 Scattering Coefficients	274
15.2.2 S-Vanishing Structures	277
15.2.3 Enhancement of Near-Cloaking	283

16	Anomalous Resonance Cloaking	287
16.1	Layer Potential Formulation	289
16.2	Anomalous Resonance in an Annulus	291

Part VIII Numerical Implementations and Results

17	Numerical Implementations	303
17.1	Implementation of \mathcal{K}_D^*	303
17.2	MSR Matrices	304
17.2.1	Calculation of the MSR Matrix for Conductivity Problem	304
17.2.2	SVD of the MSR for the Helmholtz Equation	305
17.3	GPTs	306
17.3.1	Computation of the GPTs	306
17.3.2	Reconstruction from CGPTs	307
17.3.3	Reconstruction of GPTs from MSR Data	309
17.3.4	Target Identification Using GPTs	311
17.3.5	Tracking Using GPTs	312
17.4	Implementation of the Imaging Functionals for Point Reflectors	314
17.4.1	Reverse-Time Migration Imaging Functional	314
17.4.2	Kirchhoff Migration Imaging Functional	315
17.4.3	MUSIC Imaging Functional	316
17.5	Implementation of the Imaging Functionals for Inclusions	316
17.5.1	MUSIC Algorithm	317
17.5.2	Kirchhoff Migration	318
17.5.3	Backpropagation	319
17.5.4	Topological Derivative	319
17.5.5	Simulation of Gaussian Random Field	320
17.5.6	Numerical Experiments of Imaging Functionals	321
17.6	Implementation of Time-Reversal	323
17.6.1	Solving the Wave Equation	323
17.6.2	Time Reversal of Wave Equation	324
17.6.3	Numerical Experiment	325
17.7	Implementation of Optimal Control Algorithms for Imaging Shape Deformations	326
17.8	Implementation of GPT-Vanishing Structures	329
18	Numerical Results	331
18.1	Structure of the MSR Matrix	331
18.1.1	Conductivity Equation	331
18.1.2	Helmholtz Equation	331
18.2	Matching GPTs Algorithm	332
18.3	Detection and Imaging	335

18.3.1	Realization of a Cluttered Noise	335
18.3.2	Comparison Between the Imaging Functions in the Continuum Approximation	335
18.4	Time-Reversal Imaging.....	336
18.5	Target Identification and Tracking	338
18.5.1	Dictionary Matching Algorithm	338
18.5.2	Target Location and Orientation Tracking	339
18.6	Imaging of Extended Targets	341
18.6.1	Perturbations of a Disk	341
18.6.2	Nonlinear Optimization Problem.....	343
18.7	Invisibility	343
18.7.1	GPT-Vanishing Structures.....	343
18.7.2	Scattering Coefficient Vanishing Structures	346
References.....		351
