Part I General Issues

1	Philosophical Differences in Standard EEG Interpretation Between Neurology and Psychiatry: A Historical Perspective	3
	Introduction	3
	The Renaissance of Electroencephalography in Psychiatry	5
	The American Psychiatric Electrophysiology Association: History and Mission	5
	The Birth of the APEA	6
	AMEEGA-APEA Interactions	8
	APEA-AMEEGA Rapprochement	8
	The Birth of the EEG and Clinical Neuroscience Society (ECNS)	8
	References	14
2	What Constitutes a Normal EEG	15
	Introduction	15
	Discussion and Conclusions	18
	Supported Findings	19
	Open Research Questions	19
	References	20
3	Special Electrodes	21
	Introduction	21
	T1 and T2 Electrodes	22
	Sphenoidal Electrodes	22
	Supported Observations	24
	Open Research Questions	24
	References	24
4	Effects of Psychotropic Drugs on the EEG	27
	Introduction	27
	First Generation Psychotropic Agents	28
	Atypical Antipsychotic Medications	29

Drug-Induced Paroxysmal EEG Activity	30
Lithium.	30
Supported Observations	32
Open Research Questions	32
References	32
5 The Special Case of Clozapine	35
Introduction.	35
Early Observations.	35
More Recent Reports	39
Supported Observations	41
Open Research Questions	41
References	42
6 Slowing of the EEG in Psychiatric Patients	45
Introduction.	45
Supported Observations	49
Open Research Questions	49
References	49
7 Isolated Epileptiform Discharges in Nonepileptic Psychiatric Patients	51
Introduction.	51
IEDs and the Tip of the Iceberg Concept	53
Are There Demonstrable Effects of IEDs?	54
Etiology of IEDs in Nonepileptic Individuals	55
Necessity for an Animal Model for IEDs	56
Behavioral and Cognitive Testing Procedures in Rodents	57
Brief Description of Behavioral Observation Procedure	58
ANOVAs of Six Types of Behavior for Total Averages of Each Subject (Vehicle and Treatment: $N = 12$ and $N = 12$)	58
Effect of Environmental Stimuli on IEDs	60
Supported Findings	60
Open Research Questions	61
References	62
Part II Adult Psychiatric Disorders	
8 Panic Attacks and Other Dissociative Disorders.	67
Introduction.	67
Panic as an Indicator of a Neurological Disorder.	67
Does Laterality Play a Role in the Generation of Fear or Panic Symptoms in Epileptic Patients?	70

EEG in Nonepileptic and Neurologically Intact Panic Disorder Patients	71
Heterogeneity of PD.	76
Supported Findings	77
Open Research Questions	78
Other Dissociative Disorders	78
Open Research Questions	79
References	79
9 Violence Aggression and Impulse Dyscontrol	83
Introduction.	83
Episodic Aggression and Impulse Dyscontrol	83
EEG and Episodic Dyscontrol	83
Specific EEG Abnormalities	87
Treatment Implications	88
Supported Findings	91
Open Research Questions	92
References	93
10 Borderline Personality Disorder	95
Introduction.	95
Borderline Personality Disorder Links to Epilepsy	96
Standard EEG Abnormalities Reported in BPD Patients	96
Electrophysiological Profiles	100
Quantitative EEG.	100
Supported Findings	101
Open Research Questions	102
References	103
11 Psychotic and Affective Disorders	105
Introduction.	105
SEEG in Psychotic Disorders	105
SEEG in Schizophrenia	106
SEEG Findings and Outcome	107
First-Episode Schizophrenia	107
Affective Psychoses	108
Quantified EEG.	109
Supported Findings	110
Open Research Questions	110
References	110
12 EEG Role in Psychiatric Emergencies	113
Introduction.	113
Catatonia	113

Case Reports of EEG in Catatonia	114
EEG Findings as State Indicators.	118
The Patient Presenting with a Difficult to Assess Mental Status (DAMS)	118
Ambulatory Nonconvulsive Status Epilepticus.	119
Supported Observations	121
Open Research Questions	121
References	122
 Part III Childhood Psychiatric Conditions	
 13 Attention Deficit Disorder and Learning Disabilities	127
Introduction.	127
Standard-EEG in AD/HD Studies.	128
Learning Disabilities	130
Supported Observations	132
Open Research Questions	132
References	133
 14 Autistic Spectrum Disorders	135
Introduction.	135
Evidence of Neurological Contributions to the Syndrome	135
EEG Abnormalities in ASD	136
Electrical Status Epilepticus in Slow-Wave Sleep	141
Response to Anticonvulsant Treatment	141
References	146
 Part IV Controversial EEG Waveforms	
 15 Introduction to Controversial Sharp Waves or Spike Patterns	151
Unusual but Little Studied in Psychiatric Populations Patterns.	152
What does the Co-occurrence of These Waveforms Suggest?	155
A Hypothesis to be Tested	157
References	157
 16 Psychiatric Correlates of the B-Mitten EEG Pattern	159
Introduction.	159
The B-Mitten EEG Wave Form.	159
Incidence and Age Distribution	161
Brain Sources	162
Clinical Symptomatology	162
Early Studies.	162
Affective Dysregulation	163
Extrapyramidal Side Effects	165

Tardive Dyskinesia	166
Supported Observations	168
Open Research Questions	168
References	169
17 Small Sharp Spikes.	171
Wave Form Description	171
Activation Techniques	172
Age Distribution	173
Incidence Among “Normal” Control Subjects.	173
Brain Sources	175
Clinical Considerations.	175
Small Sharp Spikes in Unselected Psychiatric Patients	176
The Affective Disturbance Connection	176
Autonomic and Neurovegetative Symptoms	180
Seizure Correlates Versus Nonseizure Correlates	182
Supported Findings	182
Open Research Questions	183
References	184
18 Six/Second Spike and Wave Complexes, the Rhythmic	
Mid-Temporal Discharges and the Wicket Spikes	187
The 6/s Spike and Wave Complexes	187
Introduction.	187
Waveform Description	187
Incidence	188
Clinical Correlates	189
Supported Observations	190
Open Research Questions	190
The Rhythmic Mid-Temporal Discharges	191
Introduction.	191
Description of Pattern.	191
Incidence	192
Clinical Correlates	193
Supported Findings	195
Open Research Questions	195
Wicket Spikes	195
Description of Pattern.	195
Incidence	196
Clinical Correlates	197
Supported Findings	199
Open Research Questions	199
References	199

19	The 6–7 and 14 Positive Spikes	201
	Introduction.	201
	Description of Wave Form	202
	Incidence	203
	Incidence in Normal Children	203
	Incidence in Adults	206
	Incidence in Pathological Conditions	208
	Psychiatric Populations	209
	Incidence in Adult Criminals.	209
	Incidence in Learning Disabilities	210
	Head Injury.	211
	Behavioral Correlates	211
	Additional Evidence of the Pathological Nature of the PS	217
	Are PSs Simply Sleep Spindles Variants?	217
	Treatment Implications	218
	Supported Observations	219
	Open Research Questions	219
	References	220
20	Some Final Thoughts for Clinical Researchers.	225
	References	227

Standard EEG: A Research Roadmap for
Neuropsychiatry

Boutros, N.

2013, XVI, 227 p. 17 illus., 5 illus. in color., Hardcover

ISBN: 978-3-319-04443-9
