

Table of Contents

Part I Introduction

1	Principal–Agent Problem	3
1.1	Problem Formulation	3
1.2	Further Reading	6
	References	6
2	Single-Period Examples	7
2.1	Risk Sharing	7
2.2	Hidden Action	8
2.3	Hidden Type	10
2.4	Further Reading	14
	References	14

Part II First Best: Risk Sharing Under Full Information

3	Linear Models with Project Selection, and Preview of Results	17
3.1	Linear Dynamics and Control of Volatility	17
3.1.1	The Model	17
3.1.2	Risk Sharing, First Best Solution	18
3.1.3	Implementing the First Best Solution	20
3.1.4	Optimal Contract as a Function of Output	21
3.1.5	Examples	22
3.2	Further Reading	24
	References	24
4	The General Risk Sharing Problem	25
4.1	The Model and the PA Problem	25
4.2	Necessary Conditions for Optimality	26
4.2.1	FBSDE Formulation	27
4.2.2	Adjoint Processes	28
4.2.3	Main Result	28

4.3	Sufficient Conditions for Optimality	30
4.4	Optimal Contracts	31
4.4.1	Implementing the First Best Solution	31
4.4.2	On Uniqueness of Optimal Contracts	32
4.5	Examples	34
4.5.1	Linear Dynamics	34
4.5.2	Nonlinear Volatility Selection with Exponential Utilities . .	35
4.5.3	Linear Contracts	37
4.6	Dual Problem	38
4.7	A More General Model with Consumption and Recursive Utilities	40
4.8	Further Reading	43
	References	43

Part III Second Best: Contracting Under Hidden Action—The Case of Moral Hazard

5	Mathematical Theory for General Moral Hazard Problems	47
5.1	The Model and the PA Problem	47
5.2	Lipschitz Case	51
5.2.1	Agent's Problem	51
5.2.2	Principal's Problem	54
5.2.3	Principal's Problem Based on Principal's Target Actions . .	57
5.2.4	Principal's Problem Based on Principal's Target Actions: Another Formulation	60
5.3	Quadratic Case	64
5.3.1	Agent's Problem	64
5.3.2	Principal's Problem	67
5.4	Special Cases	69
5.4.1	Participation Constraint at Time Zero	69
5.4.2	Separable Utility and Participation Constraint at Time Zero	72
5.4.3	Infinite Horizon	74
5.4.4	HJB Approach in Markovian Case	76
5.5	A More General Model with Consumption and Recursive Utilities	77
5.6	Further Reading	83
	References	84
6	Special Cases and Applications	85
6.1	Exponential Utilities and Lump-Sum Payment	85
6.1.1	The Model	85
6.1.2	Necessary Conditions Derived from the General Theory . .	86
6.1.3	A Direct Approach	90
6.1.4	A Solvable Special Case with Quadratic Cost	93
6.2	General Risk Preferences, Quadratic Cost, and Lump-Sum Payment	94
6.2.1	The Model	94

6.2.2	Necessary Conditions Derived from the General Theory . . .	94
6.2.3	A Direct Approach	98
6.2.4	Example: Risk-Neutral Principal and Log-Utility Agent . .	100
6.3	Risk-Neutral Principal and Infinite Horizon	103
6.3.1	The Model	103
6.3.2	Necessary Conditions Derived from the General Theory . .	103
6.3.3	A Direct Approach	106
6.3.4	Interpretation and Discussion	109
6.3.5	Further Economic Conclusions and Extensions	110
6.4	Further Reading	112
	References	113
7	An Application to Capital Structure Problems: Optimal Financing of a Company	115
7.1	The Model	115
7.2	Agent's Problem	117
7.3	Principal's Problem	121
7.3.1	Principal's Problem Under Participation Constraint	121
7.3.2	Properties of the Principal's Value Function	125
7.3.3	Optimal Contract	126
7.4	Implementation Using Standard Securities	129
7.5	Comparative Statics	130
7.5.1	Example: Agent Owns the Firm	131
7.5.2	Computing Parameter Sensitivities	131
7.5.3	Some Comparative Statics	133
7.6	Further Reading	134
	References	134
	Part IV Third Best: Contracting Under Hidden Action and Hidden Type—The Case of Moral Hazard and Adverse Selection	
8	Adverse Selection	137
8.1	The Model and the PA Problem	137
8.1.1	Constraints Faced by the Principal	138
8.2	Quadratic Cost and Lump-Sum Payment	138
8.2.1	Technical Assumptions	139
8.2.2	Solution to the Agent's Problem	140
8.2.3	Principal's Relaxed Problem	143
8.2.4	Properties of the Candidate Optimal Contract	144
8.3	Risk-Neutral Agent and Principal	145
8.4	Controlling Volatility	149
8.4.1	The Model	149
8.4.2	Main Result: Solving the Relaxed Problem	150
8.4.3	Comparison with the First Best	152
8.5	Further Reading	153
	References	153

Part V Backward SDEs and Forward-Backward SDEs

9	Backward SDEs	157
9.1	Introduction	157
9.1.1	Example: Option Pricing and Hedging	158
9.2	Linear Backward SDEs	159
9.3	Well-Posedness of BSDEs	160
9.4	Comparison Theorem and Stability Properties of BSDEs	165
9.5	Markovian BSDEs and PDEs	170
9.5.1	Numerical Methods	172
9.6	BSDEs with Quadratic Growth	173
9.7	Further Reading	181
	References	181
10	Stochastic Maximum Principle	183
10.1	Stochastic Control of BSDEs	183
10.2	Stochastic Control of FBSDEs	188
10.3	Stochastic Control of High-Dimensional BSDEs	195
10.4	Stochastic Optimization in Weak Formulation	203
10.4.1	Weak Formulation Versus Strong Formulation	203
10.4.2	Sufficient Conditions in Weak Formulation	205
10.4.3	Necessary Conditions in Weak Formulation	211
10.4.4	Stochastic Optimization for High-Dimensional BSDEs	215
10.4.5	Stochastic Optimization for FBSDEs	218
10.5	Some Technical Proofs	221
10.5.1	Heuristic Derivation of the Results of Sect. 4.7	221
10.5.2	Heuristic Derivation of the Results of Sect. 5.5	222
10.5.3	Sketch of Proof for Theorem 5.2.12	224
10.6	Further Reading	226
	References	227
11	Forward-Backward SDEs	229
11.1	FBSDE Definition	229
11.2	Fixed Point Approach	230
11.3	Four-Step Scheme—The Decoupling Approach	236
11.4	Method of Continuation	243
11.5	Further Reading	247
	References	248
	References	249
	Index	253
