

Contents

1	Introduction	1
1.1	Political Aims and General Requirements of Power Economics	1
1.2	Pellet Market Development	3
1.2.1	International Markets	4
1.2.2	Flows of Trade	9
1.2.3	Price Movement	9
	References	11
2	Biomass Types for Pellet Production	13
2.1	Classification	13
2.2	Raw Materials and Technical Potentials	14
2.2.1	Methodical Approach	15
2.2.2	Selecting Raw Materials	16
2.2.3	Technical Potential	17
2.3	Characteristics of Raw Materials	19
2.3.1	Molecular and Elementary Structure	19
2.3.2	Raw-Material Parameters for Influencing the Quality of Pellets	24
	References	29
3	Combustion Characteristics	31
3.1	Principles of Combustion	31
3.2	Physical/Mechanical Fuel Characteristics	36
3.3	Chemical/Material Fuel Characteristics	39
3.3.1	Energy-Source-Specific Parameters	40
3.3.2	Characteristics Influencing Combustion Products	46
	References	48

4	Legal Requirements for Using Wood Pellets for Providing Heat	51
4.1	Requirements for Emissions and Energy Efficiency	51
4.2	Removal of Ashes and Residues.	55
4.3	Sustainability Requirements	57
	References	58
5	Fuel Quality Requirements	61
	References	68
6	Pellet Production	71
6.1	Trunk Wood Yard and Trunk Wood Processing	71
6.1.1	Debarking	74
6.1.2	Trunk Wood Milling.	78
6.2	Wet Shavings Store	83
6.2.1	Outdoor Storage for Wet Wood Chips and Shavings	83
6.2.2	Automated Indoor Storage.	85
6.3	Transport Systems for Wet Raw Material	91
6.3.1	Scraper and Drag Chain Conveyors	92
6.3.2	Conveyor Belt	93
6.3.3	Screw Conveyor.	95
6.3.4	Vibratory Conveying Trough	96
6.3.5	Bucket Conveyors	97
6.4	Dryers	99
6.4.1	Belt Dryers	102
6.4.2	Drum Dryers	105
6.4.3	Control and Regulation	109
6.4.4	Parameters for Dryers	109
6.5	Storage for Dry Shavings	111
6.5.1	Push Floor.	111
6.5.2	Silo	112
6.6	Pelletization	116
6.6.1	General Process Description	116
6.6.2	Plant Engineering.	121
	References	136
7	Using Wood Pellets as an Energy Source.	137
7.1	Storage and Conveyance of Wood Pellets	137
7.2	Small Heating Systems	143
7.3	Medium-Sized Heating Systems	158
7.4	Large Heating Systems	163
7.5	Co-Incineration of Wood Pellets.	169
	References	171

8	Protection Against Fire and Explosions	173
8.1	Requirements of the Guidelines	173
8.2	Formulation of the Protection Concept	174
8.3	Occurrence of Explosive Atmospheres: Zoning	178
8.3.1	Zoning for Installation Sites	179
8.3.2	Zoning for Plant Areas in Contact with the Product	180
8.4	Avoiding Ignition Sources	181
8.5	Technical Measures for Avoiding Effective Ignition Sources	182
8.6	Controlling Explosions	187
8.6.1	Dimensioning of the Pressure Relief Area	188
8.6.2	Suppression of Explosions	189
8.6.3	Selection of the Decoupling Facilities	190
8.7	Organizational Measures	191
8.8	Fire Prevention Measures	194
	References	197
9	Profitability of Pellet Boilers	199
9.1	Fuel Prices	199
9.2	Economic Comparison of Various Heating Systems	201
	Reference	203
10	Research and Development	205
10.1	Optimizing the Pellet Production	206
10.2	Optimizing the Capacity of Wood Pellets for Their Use as an Energy Source	208
	Appendix: Physical Quantities and Their Conversion Formulae	211
	Index	221
