

Contents

1	Introduction	1
1.1	Overview	1
1.2	A Note on Units	2
	References	3
2	The Standard ASW Method	5
2.1	Setup of Basis Functions	5
2.2	The Secular Matrix	17
2.3	Electron Density	24
2.4	The Effective Potential	29
2.5	Total Energy	35
	References	42
3	Envelope Functions and Structure Constants	45
3.1	Envelope Functions: Basic Properties	45
3.2	Envelope Functions: Derivatives and Wronskians	52
3.3	Integrals Involving Envelope Functions	59
3.4	Integral Representation of Hankel Functions	69
3.5	Bloch Sums of Envelope Functions	74
3.6	Expansion Theorems	83
3.7	Structure Constants	87
3.8	Overlap Integrals of Envelope Functions	91
3.9	Pseudo Functions	104
3.10	Overlap Integrals of Pseudo Functions	106
3.11	Fourier Transform of Pseudo Functions	107
	References	110
4	The Plane-Wave Based Full-Potential ASW Method	113
4.1	Additive Augmentation	114
4.2	The Secular Matrix	120
4.3	Electron Density	132
4.4	The Effective Potential	137

4.5	Total Energy	147
4.6	Optical Properties	155
4.7	Transport and Thermoelectric Properties	167
	References	171
5	The Spherical-Wave Based Full-Potential ASW Method	173
5.1	Interstitial Products of Basis Functions	174
5.2	The Secular Matrix	185
5.3	Electron Density	195
5.4	The Effective Potential	202
5.5	Total Energy	214
5.6	Local Correlations via the LDA + U Method	222
5.7	Electric Field Gradients	232
	References	239
6	Details of the Standard ASW Method	241
6.1	Integrals over Augmented Functions	241
6.2	Moments of the Partial Densities of States	245
6.3	Determination of the Fermi Energy	247
6.4	Moment Analysis of the Partial Densities of States	252
6.5	Intraatomic Radial Mesh	253
6.6	Solving Poisson's Equation Inside the Atomic Spheres	255
6.7	Gradients of the Intraatomic Electron Density	260
	References	262
7	Details of the Envelope Functions	263
7.1	Calculation of Spherical Bessel Functions	263
7.2	Properties and Calculation of Cubic Harmonics	265
7.3	Angular Derivatives of Cubic Harmonics	270
7.4	Summations in Real and Reciprocal Lattice	278
7.5	Calculation of the Ewald Integral	282
7.6	Calculation of the Complementary Ewald Integral	291
7.7	Calculation of $D_{L\kappa}^{(3)}$ and $K_{L\kappa}^{(3)}$	296
7.8	Cutoff Radii for the Ewald Method	300
7.9	Integrals over Augmented Pseudo Functions	304
7.10	Matrix Representation of Rotations	306
	References	308
8	Details of the Full-Potential ASW Methods	309
8.1	Practical Aspects of the Fourier Transform	309
8.2	Calculation of the Auxiliary Density	310
8.3	Fourier Transform of the Auxiliary Density	311
8.4	Alternative Auxiliary Density	312
8.5	The Initial Electron Density	313
8.6	Calculation of the Bulk Modulus	318
	References	323

9	Brillouin-Zone Integration	325
9.1	Basic Notions	325
9.2	Special Points	331
9.3	Simple-Sampling Method	332
9.4	High-Precision Sampling Method	334
9.5	Linear Tetrahedron Method	337
9.6	Higher-Order Corrections	369
	References	370
	Further Reading	371
	Index	373

The Augmented Spherical Wave Method

A Comprehensive Treatment

Eyert, V.

2013, XV, 379 p., Softcover

ISBN: 978-3-642-25863-3
