Notations	xv
Introduction	xix
Part I Projector based approach	
1 Linear constant coefficient DAEs	3
1.1 Regular DAEs and the Weierstraß–Kronecker form	3
1.2 Projector based decoupling of regular DAEs	10
1.2.1 Admissible matrix sequences and admissible projectors	10
1.2.2 Decoupling by admissible projectors	23
1.2.3 Complete decoupling	30
1.2.4 Hierarchy of projector sequences for constant matrix pencils	36
1.2.5 Compression to a generalized Weierstraß–Kronecker form ..	37
1.2.6 Admissible projectors for matrix pairs in a generalized Weierstraß–Kronecker form	41
1.3 Transformation invariance	45
1.4 Characterizing matrix pencils by admissible projectors	47
1.5 Properly stated leading term and solution space	50
1.6 Notes and references	52
2 Linear DAEs with variable coefficients	57
2.1 Properly stated leading terms	58
2.2 Admissible matrix function sequences	60
2.2.1 Basics	60
2.2.2 Admissible projector functions and characteristic values	65
2.2.3 Widely orthogonal projector functions	75
2.3 Invariants under transformations and refactorizations	79
2.4 Decoupling regular DAEs	86
2.4.1 Preliminary decoupling rearrangements	86

2.4.2	Regularity and basic decoupling of regular DAEs	90
2.4.3	Fine and complete decouplings	104
2.4.3.1	Index-1 case	104
2.4.3.2	Index-2 case	106
2.4.3.3	General benefits from fine decouplings	108
2.4.3.4	Existence of fine and complete decouplings	111
2.5	Hierarchy of admissible projector function sequences for linear DAEs	117
2.6	Fine regular DAEs	118
2.6.1	Fundamental solution matrices	119
2.6.2	Consistent initial values and flow structure	123
2.6.3	Stability issues	127
2.6.4	Characterizing admissible excitations and perturbation index	132
2.7	Specifications for regular standard form DAEs	137
2.8	The T-canonical form	140
2.9	Regularity intervals and critical points	146
2.10	Strangeness versus tractability	160
2.10.1	Canonical forms	160
2.10.2	Strangeness reduction	164
2.10.3	Projector based reduction	166
2.11	Generalized solutions	171
2.11.1	Measurable solutions	171
2.11.2	Distributional solutions	173
2.12	Notes and references	174
3	Nonlinear DAEs	183
3.1	Basic assumptions and notions	184
3.1.1	Properly involved derivative	184
3.1.2	Constraints and consistent initial values	187
3.1.3	Linearization	195
3.2	Admissible matrix function sequences and admissible projector functions	198
3.3	Regularity regions	208
3.4	Transformation invariance	224
3.5	Hessenberg form DAEs of arbitrary size	229
3.6	DAEs in circuit simulation	239
3.7	Local solvability	250
3.7.1	Index-1 DAEs	251
3.7.2	Index-2 DAEs	259
3.7.2.1	Advanced decoupling of linear index-2 DAEs	259
3.7.2.2	Nonlinear index-2 DAEs	261
3.7.2.3	Index reduction step	268
3.8	Advanced localization of regularity: including jet variables	272
3.9	Operator settings	281

3.9.1	Linear case	283
3.9.2	Nonlinear case	287
3.10	A glance at the standard approach via the derivative array and differentiation index	290
3.11	Using structural peculiarities to ease models	300
3.12	Regularity regions of DAEs with quasi-proper leading terms	304
3.13	Notes and references	307

Part II Index-1 DAEs: Analysis and numerical treatment

4	Analysis	317
4.1	Basic assumptions and notions	317
4.2	Structure and solvability of index-1 DAEs	320
4.3	Consistent initial values	334
4.4	Notes and references	336
5	Numerical integration	339
5.1	Basic idea	340
5.2	Methods applied to ODEs and DAEs in standard form	345
5.2.1	Backward differentiation formula	345
5.2.2	Runge–Kutta method	346
5.2.3	General linear method	350
5.3	Methods applied to DAEs with a properly involved derivative	352
5.3.1	Backward differentiation formula	352
5.3.2	Runge–Kutta method	353
5.3.3	General linear method	355
5.4	When do decoupling and discretization commute?	356
5.5	Convergence on compact intervals and error estimations	361
5.5.1	Backward differentiation formula	361
5.5.2	IRK(DAE) method	364
5.5.3	General linear method	369
5.6	Notes and references	371
6	Stability issues	375
6.1	Preliminaries concerning explicit ODEs	375
6.2	Contractive DAEs and B-stable Runge–Kutta methods	378
6.3	Dissipativity	384
6.4	Lyapunov stability	387
6.5	Notes and references	394

Part III Computational aspects

7	Computational linear algebra aspects	399
7.1	Image and nullspace projectors	400

7.2	Matters of a properly stated leading term	402
7.3	The basic step of the sequence	404
7.3.1	Basis representation methods	406
7.3.2	Basis representation methods—Regular case	408
7.3.3	Projector representation method	409
7.4	Matrix function sequences	413
7.4.1	Stepping level by level	413
7.4.2	Involved version for the regular case	415
7.4.3	Computing characteristic values and index check	416
8	Aspects of the numerical treatment of higher index DAEs	419
8.1	Practical index calculation	419
8.2	Consistent initialization	424
8.3	Numerical integration	426
8.4	Notes and references	437
 Part IV Advanced topics		
9	Quasi-regular DAEs	441
9.1	Quasi-proper leading terms	441
9.2	Quasi-admissible matrix function sequences and admissible projector functions	446
9.3	Quasi-regularity	452
9.4	Linearization	455
9.5	A DAE transferable into SCF is quasi-regular	457
9.6	Decoupling of quasi-regular linear DAEs	462
9.7	Difficulties arising with the use of subnullspaces	468
9.8	Notes and references	471
9.9	Hierarchy of quasi-admissible projector function sequences for general nonlinear DAEs	475
10	Nonregular DAEs	477
10.1	The scope of interpretations	478
10.2	Linear DAEs	482
10.2.1	Tractability index	482
10.2.2	General decoupling	486
10.2.2.1	G_μ has full column rank	489
10.2.2.2	Tractability index 1, G_1 has a nontrivial nullspace	493
10.2.2.3	Tractability index 2, G_2 has a nontrivial nullspace	497
10.3	Underdetermined nonlinear DAEs	499
10.4	Notes and references	502

11	Minimization with constraints described by DAEs	505
11.1	Adjoint and self-adjoint DAEs	505
11.2	Extremal conditions and the optimality DAE	510
11.2.1	A necessary extremal condition and the optimality DAE	510
11.2.2	A particular sufficient extremal condition	520
11.3	Specification for controlled DAEs	522
11.4	Linear-quadratic optimal control and Riccati feedback solution	525
11.4.1	Sufficient and necessary extremal conditions	526
11.4.2	Riccati feedback solution	527
11.5	Notes and references	536
12	Abstract differential-algebraic equations	539
12.1	Index considerations for ADAEs	540
12.2	ADAE examples	544
12.2.1	Classical partial differential equations	545
12.2.1.1	Wave equation	545
12.2.1.2	Heat equation	546
12.2.2	A semi-explicit system with parabolic and elliptic parts	548
12.2.3	A coupled system of a PDE and Fredholm integral equations	552
12.2.4	A PDE and a DAE coupled by a restriction operator	554
12.3	Linear ADAEs with monotone operators	554
12.3.1	Basic functions and function spaces	555
12.3.2	Galerkin approach	558
12.3.3	Solvability	564
12.3.4	Continuous dependence on the data	571
12.3.5	Strong convergence of the Galerkin method	574
12.4	Notes and references	577
	Appendices	581
A	Linear algebra – basics	581
A.1	Projectors and subspaces	581
A.2	Generalized inverses	589
A.3	Parameter-dependent matrices and projectors	591
A.4	Variable subspaces	594
B	Technical computations	599
B.1	Proof of Lemma 2.12	599
B.2	Proof of Lemma 2.41	605
B.3	Admissible projectors for $Nx' + x = r$	612
C	Analysis	627
C.1	A representation result	627

C.2 ODEs 629

C.3 Basics for evolution equations 632

References 637
