Contents

1 Introduction 1
1.1 Evacuation Planning 1
1.2 Basic Network Flow Problems 4
1.2.1 A Generic Network Flow Model 7
1.2.2 A Generic Network Flow Model with Waiting on Arcs 8
1.2.3 Objectives 10
1.3 Crossing and Merging Conflicts 12
1.4 Chapter Synopsis 14
References 15

2 Literature Review 17
2.1 Flow-Based Optimization Models 17
2.2 Evacuation Models with Traffic Management Strategies 26
2.3 Further Problems in Evacuation Planning 28
2.4 Simulation Approaches 30
2.5 Summary 32
References 33

3 An Urban Evacuation Problem 39
3.1 A Network Representation 40
3.2 A Mixed-Integer Urban Evacuation Model 43
3.2.1 Decision Variables and Additional Parameters 43
3.2.2 Model Formulation 45
3.3 An Extension of the Urban Evacuation Model: Waiting on Arcs 53
3.4 An Extension of the Urban Evacuation Model: A One-Way Evacuation Model 56
3.5 Examples of the Variations of the Urban Evacuation Model 59
3.5.1 An Example Considering Different Objective Functions 60
3.5.2 An Example Considering Evacuation Models with and without Waiting 62

3.5.3 An Example Considering the Two-Way and One-Way Model 65
References 66

4 A Relaxation-Based Heuristic Approach for the Mixed-Integer Evacuation Model 67
4.1 A Relaxation-Based Heuristic Solution Approach 67
4.1.1 Preliminary Considerations 69
4.1.2 Adjustment Algorithm 77
4.2 Adjustments for the Evacuation Model with Waiting and the One-Way Urban Evacuation Model 87
4.3 Computational Study 87
4.3.1 Computational Study: Two-Way Heuristic Approach 90
4.3.2 Computational Study: One-Way Heuristic Approach 96
References 100

5 A Pattern-Based Evacuation Planning Model for Urban Areas 101
5.1 A One-Stage Pattern-Based Urban Evacuation Model 101
5.2 Patterns of Street Sections Between Intersections 107
5.3 Patterns of Intersections 108
5.3.1 Graphs and Patterns of Intersections 109
5.3.2 Number of Crossing Conflicts 112
5.3.3 Planar Graphs and Patterns 116
References 128

6 A Two-Staged Heuristic Approach 129
6.1 First Stage of the Heuristic 129
6.2 Second Stage of the Heuristic 133
6.3 Computational Study 136
6.3.1 Sets of Instances 137
6.3.2 Models for Comparison 138
6.3.3 Computational Results 139
Reference 144

7 A Multicommodity Urban Evacuation Problem 145
7.1 Introduction and Assumptions 145
7.2 A Multicommodity Evacuation Model 149
7.2.1 A Network Representation 149
7.2.2 Parameters and Variables 150
7.2.3 Objective and Constraints 152
7.3 An Illustration of Solutions of the Multicommodity Urban Evacuation Model 157

8 A Four-Staged Heuristic Approach to Solve the Urban Multicommodity Model 163
8.1 First Stage of the Multicommodity Heuristic 165
8.2 Second Stage of the Multicommodity Heuristic 169

8.3 Third Stage of the Multicommodity Heuristic 173
8.4 Fourth Stage of the Multicommodity Heuristic 180
8.5 Computational Study 181

9 Conclusions and Future Research 185
References 189

A Information About the Computational Study of the Relaxation-Based Approach 191
A.1 Reference Values Used to Compare the Results of the Relaxation-Based Approach 191
A.2 Network Representation 191
