

Contents

1	Introduction	1
1.1	Astronomical Geodetic Reference Systems	1
1.1.1	The Problem of Time	1
1.1.2	Various Space–Time Reference Systems	5
1.1.3	Classical Apparent, True, and Mean Places	7
1.2	Astronomical Geodetic Applications	9
1.2.1	Navigation	9
1.2.2	Global Geodynamics and the System Earth	10
2	Time	11
2.1	Stability of Oscillators	11
2.2	Bias and Drift	15
2.3	Quartz and Atomic Clocks	17
2.4	Cesium Clocks	21
2.5	Rubidium Clocks	21
2.6	H-Maser	22
2.7	Fountain Clocks	24
2.8	Optical Clocks	24
2.9	Application of Highly Precise Clocks	27
2.10	Relativity and the Metric Tensor	28
2.11	Lorentz Transformation	32
2.12	Geocentric Timescales TCG, TT, TAI, and UTC	34
2.13	Time Zones	41
2.14	Julian Date	41
2.15	Barycentric Timescales TCB, T_{eph} , and TDB	43
2.16	Fairhead–Bretagnon Series	44
2.17	Problems of Time Dissemination	45
2.18	Time Dissemination by Means of Satellites	46

3	Space–Time	49
3.1	Reference Systems and Frames	49
3.2	Canonical Barycentric Metric	53
3.3	Equations of Motion of Astronomical Bodies	55
4	Barycentric Dynamical Reference System	61
4.1	Concepts	61
4.2	Observational Methods	61
4.2.1	Optical Ground-Based Astrometry	61
4.2.2	Lunar Laser Ranging	62
4.2.3	Radar Measurements to Planets	68
4.2.4	Radar Tracking to Spacecraft	69
4.3	Solar System Ephemerides	70
4.3.1	Numerical Ephemerides	70
4.3.2	Semianalytical Ephemerides	85
5	Classical Astronomical Coordinates	91
5.1	Apparent Motion of Stars and Sun	91
5.2	Spatial Coordinates	94
5.2.1	Labels on the Celestial Sphere	97
5.2.2	Cartesian and Spherical Coordinates	100
5.2.3	Horizon Coordinates	101
5.2.4	Equatorial Coordinates of the First Kind	101
5.2.5	Equatorial Coordinates of the Second Kind	102
5.2.6	Ecliptic Coordinates	103
5.3	Relations Between Astronomical Coordinates	105
5.3.1	Relations between (A, z) and (h, δ)	105
5.3.2	Relations between (h, δ) and (α, δ)	107
5.3.3	Rotational Matrices	108
5.3.4	Relations Between (α, δ) and (λ, β)	111
5.4	Sidereal Times	111
6	Astrometry	115
6.1	Refraction	115
6.1.1	The Model of Saastamoinen	117
6.1.2	Refraction Corrections as Integrals	118
6.1.3	Applying Refraction Corrections	122
6.2	Parallax	123
6.2.1	Annual Parallax	123
6.2.2	Geocentric Parallax	127
6.3	Aberration	128
6.3.1	Annual Aberration	131
6.3.2	Diurnal Aberration	132
6.4	Space Motion of Stars	133
6.5	Astronomical Precession	135
6.5.1	Approximate Treatment of Precession	138

6.6	Astronomical Nutation	140
6.7	Apparent Places	144
6.8	High-Precision Astrometry	144
6.8.1	Gravitational Light Deflection	144
6.8.2	The Klioner Formalism	149
7	Celestial Reference System	155
7.1	Concepts	155
7.1.1	Barycentric Celestial Reference System	155
7.1.2	Geocentric Celestial Reference System	156
7.2	Observational Methods	160
7.2.1	Very Long Baseline Interferometry	160
7.2.2	Astrometric Space Missions	164
7.3	Classical Celestial Reference System	168
7.3.1	Fundamental Catalogs FK3, FK4, and FK5	169
7.3.2	Astrographic Catalog and Derived Catalogs	170
7.3.3	Hipparcos and Tycho Catalogs	170
7.3.4	2MASS	171
7.3.5	Schmidt Plate Survey Catalogs	171
7.3.6	UCAC	172
7.4	International Celestial Reference System	172
7.4.1	Orientation of the ICRS	173
7.4.2	Realization of the ICRF in the Optical	174
8	Terrestrial Reference System	175
8.1	Concepts	175
8.1.1	Local Terrestrial Systems	175
8.1.2	Global Terrestrial Systems	177
8.2	Observational Methods	177
8.2.1	Classical Methods	177
8.2.2	Satellite Laser Ranging	181
8.2.3	Global Positioning System	183
8.2.4	GLONASS	187
8.2.5	DORIS	188
8.2.6	GALILEO	188
8.2.7	Gyroscopes	189
8.3	International Terrestrial Reference System	192
9	From the GCRS to the ITRS	197
9.1	Polar Motion	197
9.2	Universal Time, UT1, and Length-of-Day Variations	202
9.2.1	Universal Time	203
9.2.2	UT1 and Its Variations	206
9.3	Celestial Intermediate Pole	207
9.3.1	Instantaneous Rotation Pole	208
9.3.2	Definition of the CIP	211

9.3.3	Motion of the CIP in the GCRS; CP Offsets	214
9.3.4	IAU 2000 Precession–Nutation Model	215
9.3.5	Fundamental Nutation Angles	219
9.3.6	Frame Bias Matrix	221
9.3.7	The Series by Capitaine and Wallace	221
9.3.8	Motion of the CIP in the ITRS	222
9.4	CIO, TIO, ERA, and GAST	226
9.4.1	Celestial Intermediate Origin	226
9.4.2	Terrestrial Intermediate Origin	229
9.4.3	Earth Rotation Angle θ and GAST	229
9.5	Transformations from the GCRS to the ITRS	231
9.5.1	Quasi-Classical Equinox-Based Transformation	231
9.5.2	CIO-Based Transformation	232
10	Astronomical Software - Yearbooks	235
10.1	Software Implementations	235
10.1.1	SOFA	235
10.1.2	NOVAS	236
10.2	Astronomical Yearbooks	236
10.2.1	APFS	237
10.2.2	Astronomical Almanac	237
11	Astronomical Constants	239
11.1	Natural Constants	239
11.2	Defined and Measurable Natural Constants	240
11.3	Problems Related with Natural Units	240
11.4	Body Constants and Framework	241
11.5	Initial Values and Model	242
11.6	Current Best Estimates	242
	References	245
	List of Acronyms	257
	A: Solutions to Exercises	261
	B: Description of the AstroRef Package	277
B.1	General Information	277
B.2	Download	277
B.3	Installing and Using the Package	278
B.4	Function Reference	278
B.4.1	Overview	278
B.4.2	Auxiliary Functions	279
B.5	Package Variables	308
	Index	311

Space-Time Reference Systems

Soffel, M.; Langhans, R.

2013, XIV, 314 p., Hardcover

ISBN: 978-3-642-30225-1
