

Contents

1	Introduction	1
1.1	Why Adaptive Filters?	1
1.2	Organization of the Work	3
	References	5
2	Wiener Filtering	7
2.1	Optimal Linear Mean Square Estimation	7
2.2	The Principle of Orthogonality	8
2.3	Linear Optimum Filtering	9
2.4	Wiener–Hopf Equation	10
2.5	Example: Linear Prediction	12
2.5.1	Forward Linear Prediction	12
2.5.2	Backward Linear Prediction	14
2.6	Final Remarks on Linear Prediction	15
2.7	Further Comments	16
	References	17
3	Iterative Optimization	19
3.1	Introduction	19
3.2	Steepest Descent Algorithm	20
3.2.1	Convergence of the Steepest Descent Algorithm	21
3.3	Newton-Raphson Method	23
3.4	Example	25
3.5	Further Comments	30
	References	31
4	Stochastic Gradient Adaptive Algorithms	33
4.1	Least Mean Square Algorithm	33
4.1.1	Stochastic Gradient Approximation	34

4.1.2	Computational Complexity of LMS.	36
4.1.3	LMS with Complex Signals	36
4.2	NLMS Algorithm	37
4.2.1	Approximation to a Variable Step Size SD Algorithm. . .	37
4.2.2	Approximation to an NR Algorithm	38
4.2.3	NLMS as the Solution to a Projection Problem	40
4.2.4	One More Interpretation of the NLMS	41
4.2.5	Computational Complexity of NLMS	42
4.2.6	Example: Adaptive Noise Cancellation.	43
4.3	Leaky LMS Algorithm.	46
4.4	Sign Algorithms	48
4.4.1	Sign Error Algorithm.	48
4.4.2	Sign Data Algorithm	49
4.4.3	Example: Adaptive Equalization.	50
4.5	Convergence Analysis of Adaptive Filters	53
4.5.1	General Assumptions for the Convergence Analysis . . .	55
4.5.2	Stability Analysis for a Large Class of Algorithms.. . . .	57
4.5.3	Steady State Behavior for a Large Family of Algorithms	69
4.5.4	Transient and Tracking Behavior for Adaptive Filters . .	75
4.6	Affine Projection Algorithm	77
4.6.1	APA as the Solution to a Projection Problem.	77
4.6.2	Computational Complexity of APA.	79
4.6.3	Decorrelating Property of APA.	79
4.7	Simulations Results	81
4.8	Further Comments.	85
	References	85
5	Least Squares	89
5.1	The Least Squares (LS) Problem.	89
5.1.1	Solution to the LS Problem	90
5.2	Orthogonal Projection Interpretation	93
5.3	Weighted Least Squares (WLS).	95
5.4	Some Statistical Properties of the LS Solution	96
5.5	Recursive Least Squares (RLS).	98
5.6	Convergence and Computational Complexity Issues	102
5.7	Example: Adaptive Beamforming	104
5.8	Further Comments.	110
	References	111
6	Advanced Topics and New Directions	113
6.1	Optimum H^∞ Algorithms.	113
6.2	Variable Step Size/Regularization Adaptive Algorithms.	114

6.3	Sparse Adaptive Filters	114
6.4	Robust Adaptive Filters	115
6.5	Distributed Adaptive Filtering.	116
	References	117
Index	121

A Rapid Introduction to Adaptive Filtering

Vega, L.R.; Rey, H.

2013, XII, 122 p. 23 illus., Softcover

ISBN: 978-3-642-30298-5
