

Contents

1	Introduction	1
2	Multilevel Signaling	5
2.1	Introduction	5
2.2	Multilevel Signaling and Channel Capacity	6
2.3	Optimum Number of PAM Levels	10
2.4	M-PAM Symbol Error Rate	11
2.5	Bit Error Rate for Binary Signals	13
2.6	M-PAM Generation and Decoding	14
2.6.1	M-PAM Generation	14
2.6.2	M-PAM Decoding	19
2.7	DC Balance Code	19
2.8	Multilevel Signaling Related Work	20
3	Equalization Techniques	23
3.1	Passive Equalizer	24
3.2	Active Equalizer	24
3.2.1	Source Degeneration	24
3.2.2	Differential Source Degeneration Adjustable Equalizer	26
3.2.3	Inductive Load Amplifier	26
3.3	Filter Implementation Using Transversal and Lattice Structures	27
3.4	Linear Equalization	28
3.4.1	Continuous Time FIR Filter Implementation	28
3.4.2	Discrete Time FIR Filter Implementation	30
3.5	Equalization Algorithms	32
3.6	Adaptive Equalization	34
3.6.1	Continuous Time Adaptive Equalizer	34
3.6.2	Discrete Time Adaptive Equalizer	34

3.7	Nonlinear Equalization	36
3.7.1	Decision Feedback Equalizers (DFE).	36
3.7.2	MLSE Nonlinear Equalization	37
3.8	Performance Comparison of Equalization Methods	39
4	High-Speed Transmission over Step-Index PMMA	
	Plastic Optical Fibers.	41
4.1	Why Large-Core PMMA POF?	41
4.2	POF Main Applications	42
4.3	Characteristics of Step-Index PMMA POF	43
4.3.1	POF Frequency Response and Bandwidth	43
4.3.2	POF Bending Loss	45
4.3.3	POF Coupling Loss	46
4.4	Light Sources for PMMA POF	47
4.4.1	Light Source Modulation	48
4.4.2	Laser Diode Modulation	49
4.4.3	Laser Nonlinearity.	50
4.5	Minimizing the Effects of POF Modal Dispersion	50
4.6	State of the Art for Transmission over Standard PMMA SI-POF	52
4.6.1	Without Using Equalization	52
4.6.2	By Using Equalization.	55
5	Integrated Photodiode	61
5.1	Optical Absorption.	61
5.2	Photodiode Responsivity	63
5.3	Quantum Efficiency.	63
5.4	Carrier Drift and Diffusion	64
5.5	PIN Photodiode Capacitance.	65
5.6	Photodiode Speed	65
5.7	Structure of the Implemented Photodiode	66
6	Transimpedance Amplifier	69
6.1	Introduction	69
6.2	Transimpedance Amplifier	69
6.3	Shunt-Shunt Feedback TIA.	70
6.3.1	Frequency Response	71
6.3.2	TIA Noise Analysis.	74
6.3.3	TIA with Common-Emitter Input Stage	75
6.3.4	TIA with Common-Source Input Stage	77
6.3.5	Multistage Inverter Based CMOS TIA.	78
6.4	Common-Base/Gate Input Stage	79
6.5	Regulated-Cascode TIA	80
6.6	Inverter Based Common-Drain Feedback TIA.	81

6.7	TIA with Gain Control.	83
6.8	Post Amplifier.	84
6.8.1	Limiting Amplifier	84
6.8.2	AGC Amplifier.	85
6.9	Dynamic Range.	86
7	Integrated Optical Receiver and Multilevel Transmission over PMMA SI-POF	87
7.1	Optical Receiver with 622 MHz Bandwidth	87
7.1.1	Circuit Description	87
7.1.2	Experimental Results.	89
7.1.3	Gigabit Transmission over SI-POF	95
7.1.4	1 Gbit/s over 20 m POF	96
7.2	Optical Receiver with 200 MHz Bandwidth	97
7.2.1	Experimental Results.	97
7.2.2	500 Mbit/s Transmission over SI-POF.	100
7.3	High Linearity Optical Receiver with 112 MHz Bandwidth	101
7.3.1	Circuit Description	103
7.3.2	Experimental Results.	105
7.3.3	500 Mbit/s Transmission over 40 m SI-POF.	110
7.3.4	400 Mbit/s Transmission over 50 m POF.	111
7.3.5	170 Mbit/s Transmission over 115 m SI-POF.	114
8	Equalizer Implementations for SI-POF.	117
8.1	Equalized Giga-Bit Transmission over SI-POF	117
8.2	Fully Integrated Optical Receiver Containing an Equalizer.	118
8.2.1	The Integrated SI-POF Equalizer	120
8.2.2	Experimental Results for Two-Stage Equalizer.	120
8.2.3	Experimental Results for Single-Stage Equalizer.	123
8.3	Summary of Integrated Optical Receivers with Integrated SI-POF Equalizer	128
9	Conclusions	129
	References	131
	About the Authors.	137
