Part I The Sun as a Star: Its Environment

1	Discontinuities and Turbulence in the Solar Wind	3
	Laurence Rezeau	
1.1	Shock Waves and Discontinuities	3
1.1.1	Observations of Discontinuities	3
1.1.2	Jump Conditions at the Boundary	4
1.1.3	Different Kinds of Discontinuities	5
1.2	Turbulence in the Boundary Regions and in the Solar Wind	9
1.2.1	Evidence of Turbulence in the Boundary Regions	9
1.2.2	Cluster and Multipoint Measurements	9
1.2.3	Our Present Knowledge and Questions	10
	References	13
2	Nature and Variability of Plasmas Ejected by the Sun	15
	J.-C. Vial	
2.1	Introduction	15
2.2	Some Properties of the Sun	16
2.2.1	An Unexplained Solar Region: The Corona	18
2.2.2	A Simple Derivation of the Coronal Temperature	22
2.3	The Sun and Its Permanent Loss Rate: The Solar Winds	23
2.3.1	The Two Kinds of Solar Wind	24
2.3.2	A First Approach to the Wind Velocity	24
2.3.3	The “Sources” of the Fast Wind	25
2.3.4	The “Sources” of the Slow Wind	28
2.4	Fluid Models of the Wind	29
2.4.1	The Isothermal Parker Model	31
2.4.2	Solving the Bernoulli Equation [31]	32
2.4.3	The Fast Wind and the Fluid Models	33
2.5	The Fast Wind and the Kinetic/Exospheric Models	34
2.5.1	The Kappa Distribution	34

2.5.2	Exospheric Models	36
2.6	The Sun and Its Activity-Related Plasma Losses	36
2.6.1	Flares	38
2.6.2	Eruptive Prominences	39
2.6.3	Coronal Mass Ejections	40
2.6.4	Flares, EPs, and CMEs: Closely Related Phenomena	41
2.6.5	Models of Formation of EP and CME	42
2.6.6	Interplanetary Coronal Mass Ejections (ICME)	43
2.7	The Heliosphere	44
2.8	Conclusions and Prospects	45
	References	49
	Main References	49
	General References About Solar Wind	50
	General References About Flares, CMEs, Erupting Prominences .	51
	General References About Prominences	51
3	Space Weather and Space Climate—What the Look from the Earth Tells Us About the Sun	53
	Katya Georgieva	
3.1	Introduction	53
3.2	The Sun—Basic Characteristics	55
3.2.1	Importance of the Convective Envelope	55
3.2.2	Sunspots and Sunspot Cycles	55
3.3	The Solar Dynamo Theory	56
3.4	Long-Term Variations in Solar Dynamo	58
3.4.1	Geomagnetic Activity and Its Solar Drivers	58
3.4.2	Calculation of the Speeds of the Surface and Deep Circulation	60
3.4.3	Regimes of Operation of the Solar Dynamo	70
3.5	Factors Determining the Period and Amplitude of the Sunspot Cycle	75
3.5.1	Surface Meridional Circulation—Polar Field and Sunspot Maximum: Strong Correlation	76
3.5.2	Polar Field—Deep Meridional Circulation: NO Correlation	76
3.5.3	Surface Poleward Circulation—Deep Equatorward Circulation: Strong Correlation	77
3.5.4	Deep Meridional Circulation—Next Sunspot Maximum: Strong Correlation	79
3.5.5	Sunspot Maximum—Surface Meridional Circulation: NO Correlation	80
3.5.6	Sunspot Cycle “Memory”	81
3.6	Planetary Influences on Solar Activity	82
3.7	Long-Term Variations of Toroidal Field-Related and Poloidal Field-Related Solar Agents	87

3.7.1	Two Components of the Geomagnetic Activity	87
3.7.2	Three Components of the Geomagnetic Activity	89
3.7.3	Components of the Solar Wind	92
3.7.4	Long-Term Variations of the Components of the Solar Wind and Their Source Regions	93
References	102

Part II Tides in Planetary Systems and Massive Stars

4 Tides in Planetary Systems and in Multiple Stars:

a Physical Picture	111
Stéphane Mathis and Françoise Remus		
4.1	Introduction	112
4.2	Tidal Dynamics	112
4.2.1	The Tidal Potential	112
4.2.2	Equations of the Dynamical Evolution	116
4.3	Tidal Dissipation	119
4.3.1	The Tidal Kinetic Energy Dissipation: The Engine of Systems Evolution	119
4.3.2	Tidal Dissipation in Fluid Bodies	120
4.3.3	Tidal Dissipation in Rocky or Icy Planetary Regions	133
4.3.4	Boundary Conditions	137
4.3.5	Hierarchy Between Dissipative Physical Processes and the Associated Obtained States	138
4.4	The Central Star	138
4.4.1	Tidal Action on the Internal Transport of Angular Momentum	138
4.4.2	Tidal Action on Magnetic Activity	139
4.4.3	Couplings with Magnetic Star–Planet Interactions	143
4.5	Conclusion	144
References	144

5 Interactions in Massive Binary Stars as Seen by Interferometry . . . 149

F. Millour, A. Meilland, P. Stee, and O. Chesneau		
5.1	Introduction	149
5.2	Interactions in Intermediate-Mass Stars: Classical Be Stars	150
5.3	Interactions in the Most Massive Stars	155
5.4	Novas, Bipolar Nebulae, and the Underlying Binary System	157
5.5	Discussion, Concluding Remarks	157
References	158

Part III Interferometric and Other Techniques to Peer Inside Stellar Environments

6 Very Close Environments of Young Stars 163

F. Malbet		
6.1	Introduction	163
6.2	Infrared Interferometry	164

6.2.1	Principle and Observations	164
6.2.2	Instruments Available for Inner Regions Studies	165
6.2.3	Elements of Bibliography	167
6.3	Inner Disk Physics	168
6.3.1	Sizes of Circumstellar Structures	168
6.3.2	Constraints on Disk Structure	169
6.3.3	Dust Mineralogy	170
6.3.4	Gas/Dust Connection	173
6.4	Other AU-Scale Phenomena	174
6.4.1	Outflows and Winds	174
6.4.2	Magnetosphere	174
6.4.3	Binaries and Multiple Systems	176
6.5	Future Prospects	176
	References	177
7	An Introduction to Accretion Disks	183
	E. Alecian	
7.1	Introduction	183
7.1.1	The Star Formation	183
7.1.2	The Pre-Main Sequence Phase of Stellar Evolution	184
7.1.3	The Class II Objects	185
7.2	Accretion Disk	188
7.2.1	Definition and Evidence	188
7.2.2	The Disk Structure and Composition	189
7.2.3	The Disk Evolution	201
7.3	Conclusion	202
