

Contents

1	Vectors and Tensors in a Finite-Dimensional Space	1
1.1	Notion of the Vector Space	1
1.2	Basis and Dimension of the Vector Space	2
1.3	Components of a Vector, Summation Convention	5
1.4	Scalar Product, Euclidean Space, Orthonormal Basis	6
1.5	Dual Bases	7
1.6	Second-Order Tensor as a Linear Mapping	12
1.7	Tensor Product, Representation of a Tensor with Respect to a Basis	17
1.8	Change of the Basis, Transformation Rules	19
1.9	Special Operations with Second-Order Tensors	20
1.10	Scalar Product of Second-Order Tensors	26
1.11	Decompositions of Second-Order Tensors	28
1.12	Tensors of Higher Orders	30
	Exercises	31
2	Vector and Tensor Analysis in Euclidean Space	35
2.1	Vector- and Tensor-Valued Functions, Differential Calculus	35
2.2	Coordinates in Euclidean Space, Tangent Vectors	37
2.3	Coordinate Transformation. Co-, Contra- and Mixed Variant Components	41
2.4	Gradient, Covariant and Contravariant Derivatives	43
2.5	Christoffel Symbols, Representation of the Covariant Derivative	48
2.6	Applications in Three-Dimensional Space: Divergence and Curl	52
	Exercises	60
3	Curves and Surfaces in Three-Dimensional Euclidean Space	63
3.1	Curves in Three-Dimensional Euclidean Space	63
3.2	Surfaces in Three-Dimensional Euclidean Space	69
3.3	Application to Shell Theory	76
	Exercises	82

4 Eigenvalue Problem and Spectral Decomposition of Second-Order Tensors	85
4.1 Complexification	85
4.2 Eigenvalue Problem, Eigenvalues and Eigenvectors	87
4.3 Characteristic Polynomial	90
4.4 Spectral Decomposition and Eigenprojections	92
4.5 Spectral Decomposition of Symmetric Second-Order Tensors	97
4.6 Spectral Decomposition of Orthogonal and Skew-Symmetric Second-Order Tensors	99
4.7 Cayley-Hamilton Theorem	103
Exercises	105
5 Fourth-Order Tensors	107
5.1 Fourth-Order Tensors as a Linear Mapping	107
5.2 Tensor Products, Representation of Fourth-Order Tensors with Respect to a Basis	108
5.3 Special Operations with Fourth-Order Tensors	111
5.4 Super-Symmetric Fourth-Order Tensors	114
5.5 Special Fourth-Order Tensors	116
Exercises	118
6 Analysis of Tensor Functions	121
6.1 Scalar-Valued Isotropic Tensor Functions	121
6.2 Scalar-Valued Anisotropic Tensor Functions	125
6.3 Derivatives of Scalar-Valued Tensor Functions	128
6.4 Tensor-Valued Isotropic and Anisotropic Tensor Functions	138
6.5 Derivatives of Tensor-Valued Tensor Functions	144
6.6 Generalized Rivlin's Identities	149
Exercises	152
7 Analytic Tensor Functions	155
7.1 Introduction	155
7.2 Closed-Form Representation for Analytic Tensor Functions and Their Derivatives	159
7.3 Special Case: Diagonalizable Tensor Functions	162
7.4 Special Case: Three-Dimensional Space	165
7.5 Recurrent Calculation of Tensor Power Series and Their Derivatives	171
Exercises	174
8 Applications to Continuum Mechanics	177
8.1 Polar Decomposition of the Deformation Gradient	177
8.2 Basis-Free Representations for the Stretch and Rotation Tensor	178
8.3 The Derivative of the Stretch and Rotation Tensor with Respect to the Deformation Gradient	181
8.4 Time Rate of Generalized Strains	185
8.5 Stress Conjugate to a Generalized Strain	187

8.6	Finite Plasticity Based on the Additive Decomposition of Generalized Strains	190
	Exercises	195
9	Solutions	197
9.1	Exercises of Chap. 1	197
9.2	Exercises of Chap. 2	210
9.3	Exercises of Chap. 3	222
9.4	Exercises of Chap. 4	226
9.5	Exercises of Chap. 5	237
9.6	Exercises of Chap. 6	242
9.7	Exercises of Chap. 7	253
9.8	Exercises of Chap. 8	259
	References	261
	Index	265

Tensor Algebra and Tensor Analysis for Engineers
With Applications to Continuum Mechanics

Itskov, M.

2013, XVI, 272 p., Hardcover

ISBN: 978-3-642-30878-9
