

Contents

1	Introduction	1
1.1	Overview	2
1.2	Used Symbols and Operators	9
1.3	Abbreviations	11
2	System Models	13
2.1	MIMO Broadcast Channel System Model	13
2.2	Dual MIMO Multiple Access Channel System Model	15
3	Dualities for the MIMO BC and the MIMO MAC with Linear Transceivers	17
3.1	Motivation	17
3.2	Mean Square Error Duality for Linear Transceivers	18
3.2.1	Literature Overview	18
3.2.2	Multi-Level Structure and MSE Expressions	19
3.2.3	BC to MAC Conversion	23
3.2.4	MAC to BC Conversion	31
3.2.5	Duality of BC and MAC	36
3.2.6	Advantages of the Presented Duality Compared to Hitherto Existing Ones	36
3.3	Rate Duality for Linear Transceivers Under Gaussian Signaling	37
3.3.1	BC to MAC Conversion	42
3.3.2	MAC to BC Conversion	48
3.3.3	Advantages of the Novel Rate Duality for Linear Transceivers	51

4	Rate Duality with Nonlinear Interference Cancelation	55
4.1	The Capacity Region of the MIMO MAC	55
4.1.1	The Two-User MIMO MAC	55
4.1.2	The Multi-User MIMO MAC	62
4.2	The Capacity Region of the MIMO BC	66
4.2.1	Single-Antenna Transmitter	66
4.2.2	Multi-Antenna Transmitter	70
4.3	State-of-the-Art Rate Duality	75
4.4	Novel Rate Duality	77
4.4.1	Dirty Paper Coding for Vector Signals	77
4.4.2	BC to MAC Conversion	80
4.4.3	MAC to BC Conversion	84
4.4.4	Advantages of the Novel Rate Duality	87
5	Matrix-Based Gradient-Projection Algorithm	91
5.1	Standard Gradient-Projection Algorithm	92
5.1.1	Precoder-Based Gradient-Projection Algorithm	93
5.1.2	Covariance-Based Gradient-Projection Algorithm	98
5.1.3	Step-Size Strategies	99
5.2	Relaxed Gradient-Projection Algorithm	105
5.3	Orthogonal Projection of a Block-Diagonal Matrix	108
5.3.1	Orthogonal Projection of Precoding Matrices	108
5.3.2	Orthogonal Projection of Covariance Matrices	112
6	MIMO BC Transceiver Design with Interference Cancelation	127
6.1	Sum Capacity Computation	127
6.1.1	Literature Overview	127
6.1.2	Covariance-Based Sum Capacity Computation	129
6.1.3	Precoder-Based Sum Capacity Computation	133
6.1.4	Simulation Results	136
6.2	Weighted Sum Rate Maximization	140
6.2.1	Motivation	140
6.2.2	Literature Overview	141
6.2.3	Covariance-Based Weighted Sum Rate Maximization	142
6.2.4	Precoder-Based Weighted Sum Rate Maximization	144
6.2.5	Simulation Results	145
7	Linear Transceiver Design for the MIMO BC	151
7.1	Motivation for Linear Transceivers	151
7.1.1	Typical Sequences Approach to Dirty Paper Coding	152
7.1.2	Modulo-Lattice Additive Noise Channel Approach	155
7.2	Sum Rate Maximization	157
7.2.1	Basic Properties of the Sum Rate Expression	158
7.2.2	Combinatorial Sum Rate Maximization	160

7.2.3	Successive Sum Rate Maximization	164
7.2.4	Simulation Results	165
7.3	Weighted Sum Rate Maximization	171
7.3.1	Weighted Sum Rate Expression and Wirtinger Derivatives.	171
7.3.2	Simulation Results	172
7.4	Sum Mean Square Error Minimization.	176
7.4.1	Dual MIMO MAC Approach	177
8	Asymptotic High Power Analysis of the MIMO BC.	183
8.1	Overview and Asymptotic Notation	184
8.1.1	Definitions	184
8.1.2	Basic Principle and Literature Overview	186
8.2	Fixed Channel Weighted Sum Rate Analysis	189
8.2.1	Cooperative Point-to-Point MIMO System	190
8.2.2	MIMO Broadcast Channel with Dirty Paper Coding	196
8.2.3	MIMO Broadcast Channel with Linear Transceivers	214
8.3	Ergodic Weighted Sum Rate Analysis	229
8.3.1	Wishart and Inverse Wishart Distribution.	230
8.3.2	Point-to-Point MIMO System	232
8.3.3	MIMO Broadcast Channel with Dirty Paper Coding	233
8.3.4	MIMO Broadcast Channel with Linear Transceivers	234
8.4	Simulation Results.	238
9	Description of the Quality of Service Feasibility Region	241
9.1	Literature Overview on Feasibility and Power Minimization. . .	242
9.2	Feasibility in the Vector Broadcast Channel	247
9.2.1	Regular Channels Scenario.	251
9.2.2	Singular Channels Scenario	257
9.3	Feasibility in the MIMO Broadcast Channel	269
9.3.1	Feasibility Under Single-Stream Transmission	270
9.3.2	Optimality of Single-Stream Transmission	273
	Appendix	277
