

Contents

1	Protoatmospheres	1
1.1	Nebula-Based H/He-Rich Gas Envelopes	1
1.2	Catastrophically Outgassed Steam Atmospheres	5
1.3	Degassed Secondary Atmospheres from Subsequent Tectonic Activity	10
	References	12
2	Evolution of the Solar/Stellar Radiation and Plasma Environment	15
2.1	Solar/Stellar-Atmospheric Temperature Relations	15
2.2	Radiation Environment of the Young Sun/Stars	18
2.3	Evolution of the Solar/Stellar Wind with Time	21
	References	22
3	Escape of Planetary Atmospheres	25
3.1	Atmospheric Escape Processes and their Role in Atmosphere Evolution	25
3.1.1	Jeans Escape	28
3.1.2	Hydrodynamic Atmospheric Expansion and Blow-Off	30
3.1.3	Ion Pick Up	32
3.1.4	Plasma Instabilities and Ionospheric Clouds	34
3.1.5	Momentum Transfer, Cool Ion Outflow, and Polar Wind	36
3.1.6	Photochemical Escape and Formation of Suprathermal Atom Coronae	38
3.1.7	Atmospheric Sputtering	41
3.1.8	Evolutionary Relevance and Efficiency of Atmospheric Escape Processes	42
3.2	EUV-Powered Escape of Hydrogen-Rich Protoatmospheres	44
3.2.1	The H ₂ Breakdown Region	44

3.2.2	Escape of H-Rich Gas Envelopes	46
3.3	Atmosphere Evolution of Venus, Earth, and Mars	51
3.3.1	Escape of Early Steam Atmospheres	51
3.3.2	Atmospheric Escape from Venus and Mars During Modern Solar Activity	55
3.3.3	Ion Escape from the Earth's Magnetospheric Environment	60
3.4	Stability Problems of Nitrogen-Rich Atmospheres	62
3.5	Implications for the Search of "Earth-Analogue" Exoplanets	63
	References	67
4	Observational Tests of Atmosphere Evolution Hypotheses	75
4.1	The Role of Energetic Neutral Atoms	75
4.2	UV-Transit Observations and Modeling as a Remote Sensing Tool for Analyzing Stellar-Exoplanet Interaction Processes	78
4.3	Observations of Hydrogen Clouds and Extended Upper Atmospheres Around Terrestrial Exoplanets	81
	References	85
5	Conclusion	89
	Literature	93
	Index	95

Origin and Evolution of Planetary Atmospheres

Implications for Habitability

Lammer, H.

2013, XVI, 98 p. 37 illus., 23 illus. in color., Softcover

ISBN: 978-3-642-32086-6
