

Contents

1	Magnetohydrodynamics	1
1.1	The Fluid Approximation	2
1.1.1	Matter as a Continuum	2
1.1.2	Solid Versus Fluid	3
1.2	Essentials of Hydrodynamics	4
1.2.1	Mass: The Continuity Equation	4
1.2.2	The D/Dt Operator	6
1.2.3	Linear Momentum: The Navier–Stokes Equations	7
1.2.4	Angular Momentum: The Vorticity Equation	10
1.2.5	Energy: The Entropy Equation	12
1.3	The Magnetohydrodynamical Induction Equation	13
1.4	Scaling Analysis	15
1.5	The Lorentz Force	18
1.6	Joule Heating	20
1.7	The Full Set of MHD Equations	20
1.8	MHD Waves	22
1.9	Magnetic Energy	23
1.10	Magnetic Flux Freezing and Alfvén’s Theorem	24
1.11	The Magnetic Vector Potential	25
1.12	Magnetic Helicity	26
1.13	Force-Free Magnetic Fields	26
1.14	The Ultimate Origin of Astrophysical Magnetic Fields	27
1.14.1	Why \mathbf{B} and not \mathbf{E} ?	27
1.14.2	Monopoles and Batteries	28
1.15	The Astrophysical Dynamo Problem(s)	30
1.15.1	A Simple Dynamo	30
1.15.2	The Challenges	33
	Bibliography	34

2	Decay and Amplification of Magnetic Fields	37
2.1	Resistive Decays of Magnetic Fields	37
2.1.1	Axisymmetric Magnetic Fields	38
2.1.2	Poloidal Field Decay	39
2.1.3	Toroidal Field Decay	41
2.1.4	Results for a Magnetic Diffusivity Varying with Depth	42
2.1.5	Fossil Stellar Magnetic Fields	43
2.2	Magnetic Field Amplification by Stretching and Shearing	44
2.2.1	Hydrodynamical Stretching and Field Amplification	44
2.2.2	The Vainshtein & Zeldovich Flux Rope Dynamo	46
2.2.3	Hydrodynamical Shearing and Field Amplification	48
2.2.4	Toroidal Field Production by Differential Rotation	48
2.3	Magnetic Field Evolution in a Cellular Flow	52
2.3.1	A Cellular Flow Solution	52
2.3.2	Flux Expulsion	57
2.3.3	Digression: The Electromagnetic Skin Depth	59
2.3.4	Timescales for Field Amplification and Decay	60
2.3.5	Flux Expulsion in Spherical Geometry: Axisymmetrization	62
2.4	Two Anti-Dynamo Theorems	64
2.4.1	Zeldovich's Theorem	65
2.4.2	Cowling's Theorem	66
2.5	The Roberts Cell Dynamo	68
2.5.1	The Roberts Cell	68
2.5.2	Dynamo Solutions	69
2.5.3	Exponential Stretching and Stagnation Points	72
2.5.4	Mechanism of Field Amplification in the Roberts Cell	73
2.5.5	Fast Versus Slow Dynamos	74
2.6	The CP Flow and Fast Dynamo Action	75
2.6.1	Dynamo Solutions	76
2.6.2	Fast Dynamo Action and Chaotic Trajectories	78
2.6.3	Magnetic Flux Versus Magnetic Energy	80
2.6.4	Fast Dynamo Action in the Nonlinear Regime	81
2.7	Dynamo Action in Turbulent Flows	82
	Bibliography	83
3	Dynamo Models of the Solar Cycle	87
3.1	The Solar Magnetic Field	88
3.1.1	Sunspots and the Photospheric Magnetic Field	88
3.1.2	Hale's Polarity Laws	90
3.1.3	The Magnetic Cycle	92

3.1.4	Sunspots as Tracers of the Sun's Internal Magnetic Field	93
3.1.5	A Solar Dynamo Shopping List	94
3.2	Mean-Field Dynamo Models	95
3.2.1	Mean-Field Electrodynamics	95
3.2.2	The α -Effect	97
3.2.3	Turbulent Pumping	101
3.2.4	The Turbulent Diffusivity	102
3.2.5	The Mean-Field Dynamo Equations	103
3.2.6	Dynamo Waves	103
3.2.7	The Axisymmetric Mean-Field Dynamo Equations	105
3.2.8	Linear $\alpha\Omega$ Dynamo Solutions	107
3.2.9	Nonlinearities and α -Quenching	112
3.2.10	Kinematic $\alpha\Omega$ Models with α -Quenching	113
3.2.11	Enters Meridional Circulation: Flux Transport Dynamos	116
3.2.12	Interface Dynamos	118
3.3	Babcock–Leighton Models	121
3.3.1	Sunspot Decay and the Babcock–Leighton Mechanism	122
3.3.2	Axisymmetrization Revisited	127
3.3.3	Dynamo Models Based on the Babcock–Leighton Mechanism	128
3.3.4	The Babcock–Leighton Poloidal Source Term	129
3.3.5	A Sample Solution	130
3.4	Models Based on HD and MHD Instabilities	132
3.4.1	Models Based on Shear Instabilities	132
3.4.2	Models Based on Flux-Tube Instabilities	134
3.5	Global MHD Simulations	135
3.6	Local MHD Simulations	143
	Bibliography	146
4	Fluctuations, Intermittency and Predictivity	153
4.1	Observed Patterns of Solar Cycle Variations	153
4.1.1	Pre-Telescopic and Early Telescopic Sunspot Observations	153
4.1.2	The Sunspot Cycle	155
4.1.3	The Butterfly Diagram	156
4.1.4	The Waldmeier and Gnevyshev–Ohl Rules	158
4.1.5	The Magnetic Activity Cycle	160
4.1.6	The Maunder Minimum	160
4.1.7	From Large-Scale Magnetic Fields to Sunspot Number	162

4.2	Cycle Modulation Through Stochastic Forcing	164
4.3	Cycle Modulation Through the Lorentz Force	168
4.4	Cycle Modulation Through Time Delays	171
4.5	Intermittency	173
4.6	Model-based Cycle Predictions	176
4.6.1	The Solar Polar Magnetic Field as a Precursor	177
4.6.2	Model-Based Prediction Using Solar Data	180
	Bibliography	182
5	Stellar Dynamos.	187
5.1	Early-Type Stars	189
5.1.1	Mean-Field Models	189
5.1.2	Numerical Simulations of Core Dynamo Action	192
5.1.3	Getting the Magnetic Field to the Surface.	194
5.1.4	Alternative to Core Dynamo Action.	194
5.2	A-Type Stars	195
5.2.1	Observational Overview	195
5.2.2	The Fossil Field Hypothesis	197
5.2.3	Dynamical Stability of Large-Scale Magnetic Fields	197
5.2.4	The Transition to Solar-Like Dynamo Activity	197
5.3	Solar-Type Stars	198
5.3.1	Observational Overview	198
5.3.2	Empirical Stellar Activity Relationships	199
5.3.3	Solar and Stellar Spin-Down	200
5.3.4	Modelling Dynamo Action in Solar-Type Stars	206
5.4	Fully Convective Stars	207
5.5	Pre- and Post-Main-Sequence Stars	208
5.6	Compact Objects	209
5.7	Galaxies and Beyond	210
	Bibliography	211
	Appendix A: Useful Identities and Theorems from Vector Calculus	215
	Appendix B: Coordinate Systems and the Fluid Equations	217
	Appendix C: Physical and Astronomical Constants.	227
	Appendix D: Maxwell's Equations and Physical Units	229
	Index	233

Solar and Stellar Dynamos

Saas-Fee Advanced Course 39 Swiss Society for

Astrophysics and Astronomy

Charbonneau, P. - Steiner, O. (Ed.)

2013, XVI, 240 p., Hardcover

ISBN: 978-3-642-32092-7
