Part I The Theoretical Bases of Polarization

1	Spin and Its Properties	3
1.1	Elements of Nonrelativistic Quantum Mechanics	4
1.2	Angular Momentum Operator	10
1.3	Pauli Spin Operator	18
1.4	Spinors	20
1.5	Schrödinger Equation	24
1.6	Dirac Equation	32
1.7	Elements of Relativistic Quantum Mechanics	37
1.8	Tensors and Lorentz Transformations of Spinors	43
1.9	Spin of a Relativistic Particle with Nonzero Mass	48
1.10	Spin of a Massless Particle	49
1.11	Motion of the Polarization Vector in an External Electromagnetic Field	50
1.12	Thomas Spin Precession	53
	References	56
2	Spin in Strong Interactions	59
2.1	Density Matrix	59
2.2	Reaction Matrix	62
2.3	R , P , and T Transformations	64
2.4	Unitarity Condition	70
2.5	Pion–Nucleon Scattering	72
2.6	Nucleon–Nucleon Scattering	77
2.6.1	Construction of the Reaction Matrix	77
2.6.2	Some Ways for Experimentally Seeking P - and T -noninvariant Terms in the Matrices of the Strong Interaction	81

2.7	Complete Set of Experiments	82
2.7.1	Complete Experiment on pp Elastic Scattering at 0° in the Center-of-Mass Frame. The Total Cross Sections for Nucleon–Nucleon Interactions	83
2.7.2	Forward NN -Scattering Amplitudes	84
2.7.3	Complete Set of Experiments on pp Elastic Scattering at 90° in the Center-of-Mass Frame	86
2.7.4	Complete Set of Experiments on pp Elastic Scattering at an Arbitrary Angle in the Center-of-Mass Frame	87
2.8	Partial Wave Analysis	96
2.9	Relativistic Pion–Nucleon Scattering Matrix	103
2.9.1	Covariant Density Matrix	107
2.10	Relativistic Nucleon–Nucleon Scattering	108
2.10.1	Relation Between the Amplitudes in Different Representations	115
2.11	Isospin T , C and G Parities	116
2.11.1	Isotopic Invariance	116
2.11.2	Charge Conjugation	119
2.11.3	G Transformation	120
	References	123
3	Theoretical Models	125
3.1	Fermi Model	125
3.2	Chirality Conservation Hypothesis	130
3.3	Asymptotic Relations Between Polarizations in the Cross Channels of a Reaction	133
3.4	Regge Model	143
3.5	Elements of Quantum Chromodynamics	151
3.6	Single-Spin Asymmetry in the Inclusive Production of Hadrons . .	154
3.7	U -Matrix Method (Fixed t Values)	161
3.8	Other Phenomenological Models	166
3.8.1	Model of Rotating Hadronic Matter	166
3.8.2	DeGrand–Miettinen Model for Polarization Asymmetry in the Inclusive Production of Hadrons	170
3.8.3	Lund Model	175
3.8.4	Chromomagnetic String Model	178
3.9	Polarization as a Tool for Studying Hadron Matter Under the Extremum Conditions	187
	References	190
4	Deep Inelastic Scattering of Leptons	195
4.1	Kinematics of the DIS Process	196
4.2	Cross Sections for the DIS of Leptons by Nucleons	198
4.3	Nucleon Structure Functions	200
4.4	Structure Functions and Quark–Parton Model	203
4.5	Structure Function and QCD	204

4.6	Determination of Parton Distributions	207
4.7	Transversity	209
	References	221

Part II Polarization Technology

5	Methods for Obtaining Polarized Beams	225
5.1	Acceleration of Polarized Protons	227
5.1.1	BNL Accelerating Storage Complex	228
5.1.2	Calculation of Resonance Strength	230
5.1.3	Calculations for the AGS	232
5.2	Polarized Electron Beams	235
5.2.1	Polarized Electron Beam of the HERA Ring Collider	235
5.2.2	Polarized Electron Beam of the SLC Linear Collider	242
5.3	Polarized Muon Beams	247
	References	249
6	Polarized Targets	251
6.1	Polarized Solid Targets	256
6.1.1	Polarized Target of the HERA Facility	257
6.1.2	Polarized Target of the PROZA Setup (IHEP)	260
6.1.3	Polarized Target of the E704 Experiment (FNAL)	265
6.1.4	Polarized Target of the E143 and E153 Experiments (SLAC)	267
6.1.5	Polarized Target of the EMC Experiment (CERN)	269
6.1.6	Polarized Target of the SMC Experiment (CERN)	272
6.1.7	Polarized Target of the COMPASS Setup (CERN)	273
6.2	Polarized Gas Targets	275
6.2.1	RHIC Polarized Jet Target (BNL)	276
6.2.2	Polarized Storage-Cell Gas Target of the HERMES Experiment (DESY)	280
6.3	Conclusions	283
	References	283
7	Polarized Hydrogen Ion Sources for Accelerators/Colliders	285
7.1	Polarized Atomic Beam Sources	286
7.1.1	Polarized Ion Source at the Institute for Nuclear Research, Russian Academy of Sciences	286
7.1.2	IUCF-CIPIOS Polarized Ion Source	289
7.2	Optically Pumped Polarized Ion Source (OPPIS)	290
7.3	Conclusions	296
	References	296
8	Beam Polarimetry	299
8.1	Basic Relations in Polarimetry	300
8.2	Classification of Polarimeters	302
8.3	Polarimetry of Proton Beams	304

8.4	U-70 Accelerator Complex at IHEP	305
8.4.1	Polarimeter on 25 keV for an Atomic Beam Source	305
8.4.2	Relative Polarimeter for an Energy of 30 MeV	306
8.4.3	Polarimeter for the 1.5-GeV Booster	307
8.4.4	Polarimeters for an Energy of 70 GeV	309
8.5	Polarimetry of Electron Beams	318
8.5.1	Mott Polarimeter	318
8.5.2	Møller Polarimeter	319
8.5.3	Compton Polarimeter	321
8.6	Polarimetry of Muon Beams	321
	References	323

Part III Polarization Experiments and Their Results

9	Investigation of the Nucleon Structure Functions	329
9.1	Polarization as a Precision Tool for Measuring the Parameters of the Standard Model	329
9.2	Spin Structure Functions	333
	References	340
10	Hyperon Polarization	343
10.1	Dependence of Hyperon Polarization on Reaction Parameters	343
10.1.1	Energy Dependence of Λ Hyperon Polarization	344
10.1.2	Dependence of Hyperon Polarization on p_T	349
10.1.3	Dependence of Hyperon Polarization on x_F	351
10.1.4	Polarization of Hyperons Produced by a Σ^- Beam	354
10.2	Inclusive Reactions with the Production of Hyperons by the Polarized Proton Beam	356
10.2.1	Analyzing Power of Inclusive Reactions with the Production of Hyperons	356
10.2.2	Spin Transfer Process in the Inclusive Production of Hyperons	357
	References	360
11	Inclusive Hadron Production	363
11.1	Single-Spin Asymmetry in Inclusive Hadron Production	363
11.1.1	Asymmetry in the Inclusive Production of π^0 Mesons by Polarized Proton and Antiproton Beams at Intermediate Transverse Momentum (Beam Fragmentation Region)	364
11.1.2	Asymmetry in the Inclusive Production of π^\pm Mesons by the Polarized Proton and Antiproton Beams in the Beam Fragmentation Region	364
11.1.3	Asymmetry in the Inclusive Production of π^\pm Mesons by the Polarized Proton and Antiproton Beams at Intermediate Momentum Transfers (the Beam Fragmentation Region)	366
11.1.4	Theoretical Models	366

11.1.5	Single-Spin Asymmetry at Very Small Transverse Momentum	367
11.1.6	Single-Spin Asymmetry in the Inclusive Production of Direct Photons in the Central Region	369
11.1.7	Single-Spin Asymmetry for π^0 Mesons at High Transverse Momenta p_T	370
11.2	Double-Spin Asymmetry in Inclusive Hadron Production	374
11.2.1	Double-Spin Asymmetry in the Inclusive Production of π^0 Mesons in the Central Region in the Collision of Longitudinally Polarized Proton and Antiproton Beams with the Longitudinally Polarized Target	375
11.2.2	Double-Spin Asymmetry in the Inclusive Multiphoton Production of Jet Pairs	375
11.2.3	Spin-Dependent Total Cross Sections	377
	References	378
12	Latest Results from the Largest Polarization Setups	381
12.1	COMPASS Polarization Setup and the Results Obtained on It	381
12.2	HERMES Polarization Setup and the Results Obtained on It	385
12.3	Polarized RHIC Complex and the Results Obtained on It	389
12.3.1	STAR Polarization Setup	390
12.3.2	PHENIX Polarization Setup	392
12.3.3	The $pp2pp$ Polarization Experiment at RHIC	395
12.3.4	Polarization in Elastic pp and pC Scattering at RHIC in the Fixed Target Mode	397
	References	398
13	Results of the Experiments with Fixed Targets	401
13.1	Polarization in the Elastic Scattering of Hadrons	401
13.1.1	Results of Polarization Measurements	403
13.1.2	Results of the Measurement of the Spin Rotation Parameter R	407
13.2	Polarization in Charge Exchange Reactions	409
13.3	Conclusions of Part III	417
13.4	Conventions for Spin Parameters in High Energy Scattering Experiments	418
13.4.1	Sign Convention for Particle Polarization (Basle Convention) (Nucl. Phys. 21, 696 (1960))	418
13.4.2	Conventions for Spin Parameters (Ann Arbor Convention) (Modified Version of October 24, 1977 Report of Notation Committee (Ashkin, Leader-Chairman, Marshak, Roberts, Soffer, Thomas) Approved by Workshop on October 25, 1977)	418
