

Contents

- 1 Introduction** 1
 - 1.1 Motivation 1
 - 1.2 Structure 2
- 2 Closed Queueing Networks** 5
 - 2.1 Assumptions 5
 - 2.2 Characteristics 9
- 3 Literature Review** 15
 - 3.1 Relevant Theorems 17
 - 3.2 Exact Methods 19
 - 3.2.1 Product-Form Networks 19
 - 3.2.2 Non-Product-Form Networks 24
 - 3.3 Approximate Methods 26
 - 3.3.1 Exponential Distribution and Infinite Buffer Capacity 26
 - 3.3.2 Exponential Distribution and Finite Buffer Capacity 28
 - 3.3.3 General Distribution and Infinite Buffer Capacity 33
 - 3.3.4 General Distribution and Finite Buffer Capacity 42
- 4 Decomposition Approach** 45
 - 4.1 Algorithm 45
 - 4.1.1 Outer Loop 47
 - 4.1.2 Inner Loop 50
 - 4.2 Numerical Study 56
- 5 Markov-Chain Approach** 61
 - 5.1 Overview of the Markov-Chain Approach 61
 - 5.2 Phase-Type Distributions 64
 - 5.2.1 Selection of Phase-Type Distributions 65
 - 5.2.2 Two-Moment Parameter Fit of Selected Phase-Type Distributions 67

5.3	Modeling	71
5.3.1	Phase-Type and Original Representation	71
5.3.2	Markov-Chain Models of CQN	73
5.4	State Space	79
5.4.1	Generation of Workpiece Allocations	82
5.4.2	Generation of Phases	86
5.4.3	Generation of Blocking Statuses	89
5.5	Transition Rates	91
5.5.1	Derivation of the Global Balance Equations	91
5.5.2	Construction of the Transition Rate Matrix	111
5.6	Solution of the Linear System of Equations	116
5.6.1	GMRES	116
5.6.2	Examples	118
5.7	Performance Measures	120
5.7.1	Aggregation of the Markov-Chain Steady-State Probabilities	120
5.7.2	Calculation of the Performance Measures	121
5.7.3	Examples	123
5.8	Runtime Performance and Numerical Results	124
6	Distribution of the Time Between Processing Starts	131
6.1	Motivation	132
6.2	Structure	133
6.3	Assignment of the Markov-Chain States to Subsets	135
6.4	Components of the Distribution	137
6.4.1	Probabilities of Transition into Non-active States	137
6.4.2	Time Spent in a Non-active State	140
6.4.3	Transition Probabilities Between Non-active States	142
6.5	Determination of the Distribution	142
6.5.1	General Phase-Type Distribution	143
6.5.2	Transition Rate Matrix of the $TBPS_i$ -Distribution	144
6.6	Examples	147
6.6.1	Exponential Distribution	147
6.6.2	Cox-2 Distribution	150
6.7	Numerical Study of the Parameter Influences on $CV^2(TBPS_i)$	151
6.7.1	Influence of the Processing Rate	152
6.7.2	Influence of c^2	153
6.7.3	Influence of the Buffer Capacity	157
7	Conclusion	159
	Bibliography	161
	Index	169

Performance Analysis of Closed Queueing Networks

Lagershausen, S.

2013, XXIII, 169 p. 49 illus., 5 illus. in color., Softcover

ISBN: 978-3-642-32213-6
