

Contents

1	Introduction: Colors, Natural and Synthetic, in the Ancient World	1
1.1	Introduction	1
1.2	Working Definition and Nature of Color	2
1.3	Natural and Synthetic Colors in the Ancient World	2
1.3.1	Blue Coloring Materials	3
1.3.2	Red Coloring Materials	7
1.3.3	Yellow Coloring Materials	9
	References	9
2	Discovery of the Physics of Color	11
2.1	Theories on the Nature of Light	11
2.2	Newton's Famous Prismatic Dispersion Experiments	12
2.3	Consequences of Newton's Experiment	14
2.4	The Visible Spectrum Examined	15
2.5	The Electromagnetic Spectrum	16
2.6	How We See Color	18
2.6.1	The Light Source	18
2.6.2	Interaction of Light with Matter	20
2.6.3	The Object Observed	21
2.6.4	The Eye–Brain Detector-Interpreter	23
2.6.5	Primary Colors	25
	References	27
3	The Chemical Causes of Color	29
3.1	Development of Atomic Theory	29
3.2	The Chemical Bond	31
3.3	Electronic Transitions: The Hydrogen Spectrum	33
3.4	Color in Organic Compounds	35
3.4.1	The MO Model	35

3.4.2	The VB Model	36
3.4.3	The Free Electron Model	37
3.4.4	Modification of Witt's Terms and Classification of Colored Organic Compounds	37
3.5	Colored Inorganic Compounds	38
3.5.1	Electronic Transitions in Coordination Compounds	38
3.5.2	Color in Chelate Complexes	40
3.5.3	Charge Transfer Transitions	41
3.5.4	Semiconducting Materials	42
	References	44
4	Colorant Usage from Antiquity to the Perkin Era	47
4.1	Body Paint, Face Paint, Hair Coloring, Cosmetics	47
4.2	Ceramics, Glasses, Glazes and Stained Glass	48
4.2.1	The Nature of Glasses	49
4.2.2	The Desired Properties of Glazes: Colorants in Glazes	49
4.2.3	Stained and Painted Glass	51
4.3	Artists' Colorants	53
4.3.1	Literature Sources for Ancient, Medieval, and Renaissance Technical Practice	54
4.3.2	Pigment Use in Manuscript Painting	57
4.3.3	A Digression on Two Blue Pigments: Iron Blue and Ultramarine	58
4.3.4	Pigment Use in Mosaic Painting	60
4.3.5	Pigment Use in Fresco Painting	61
4.3.6	Pigment Use in Oil Painting	63
4.4	Dyes	64
4.4.1	Tyrian Purple	65
4.4.2	Natural Colorants from Around the World	67
4.4.3	Emergence of the Dye Industry	69
	References	75
5	Beyond Perkin	79
5.1	Early Attempts at Dye Synthesis in the Years Following Mauve	79
5.2	Hofmann's Early Theoretical Work	80
5.3	Evolution: From Craft to Science	81
5.4	Structural Developments	82
5.5	Adolf von Baeyer and the Synthesis of Indigo	83
5.6	From Madder to Alizarin: A Convolved Journey	85
5.7	Synthesis of Alizarin	87
5.8	Conclusion: Legacy of the Dye Industry	88
	References	91

6 Major Analytical Techniques Based on Color: Volumetric Analysis; Chromatography; Spectroscopy; Color Measurement . . .	93
6.1 Volumetric Analysis	93
6.2 Chlorophyll and Chromatography	95
6.3 Spectroscopy	99
6.4 Color Measurement	105
References	108
 7 Color on the Biological and Biochemical Front	 111
7.1 Reduction and Oxidation of the Vat Dyes	111
7.2 Research on the Color of Blood	112
7.3 The Towering Figure of the Multifaceted Paul Ehrlich.	113
7.3.1 Ehrlich's Early Colorful Work with Histological Staining	113
7.3.2 Ehrlich's Major Ideas	114
7.3.3 The Birth of Chemotherapy	114
7.3.4 The Salvarsan Story	116
7.3.5 A Summary of Paul Ehrlich's Accomplishments from the Standpoint of Dyes and Colors	117
7.3.6 Paul Ehrlich: The Person	118
7.4 Some Other Biochemical Spin-Offs from the German Dye Industry and Paul Ehrlich's Legacy.	119
7.4.1 Gerhard Johannes Domagk (1895–1964)	119
7.4.2 Paul Hermann Müller (1899–1965)	120
7.4.3 Monoclonal Antibodies	120
7.5 More Colorful Natural Products Chemistry	121
7.5.1 Chlorophyll	121
7.5.2 The Carotenoids and Xanthophylls	123

 8 Finale: Color in Foods, Photochemistry, Photoluminescence, Pharmaceuticals, Fireworks, Fun, and the Future	 129
8.1 Color in Foods	129
8.2 Photochemistry and Photoluminescence	131
8.2.1 Film and Photography	132
8.2.2 Photoluminescence: Fluorescence and Phosphorescence	134
8.2.3 Photoluminescence: Lasers	136
8.2.4 Color in Fireworks: Pyrotechnics	137
8.3 Color in Pharmaceuticals: Pills and Tablets	138
8.4 Color for Fun and Enjoyment	138
8.5 Color in the Future	141
