

Contents

1	Introduction	1
1.1	History of Polysaccharides from Bacteria	1
1.2	Cyclic β -Glucans	2
1.3	α -Cyclic Glucan	6
1.4	Linear Glucans	7
1.5	Cyclodextrins	8
	References	10
2	Applications of Cyclic β-Glucans	15
2.1	In Food	16
2.2	Medical Technology	17
2.3	As Wound Dressing Material	17
2.4	Microparticulate Form of β -Glucan for Pharmaceutical Application	17
2.5	Synthesis of Selenium Nanowires	19
2.6	Drug Delivery	20
2.7	Enantiomeric Separator	20
2.8	In Chiral Technology	23
2.9	Chiral Stationary Phase	24
2.10	Carboxymethylated Cyclic β -(1,2)-Glucans	24
2.11	Inclusion Complexes	25
2.12	β -D-Glucans Complexation with Zearalenone	25
2.13	Inclusion Complex with Paclitaxel	26
2.14	Inclusion Complexation with a Plant Flavonoid Luteolin	26
2.15	Inclusion Complexation with Naproxen	27
2.16	Functionalized β -(1,3)-Glucan in Carbon Nanotubes	27
2.17	Application of Cyclic β -(1,3),(1,6)-Glucans in Chiral Technology	28
	References	28

3	Properties of Cyclic Glucans	33
3.1	Structure	33
3.2	Molecular Biological Function of β -Glucans in Immunity	36
3.2.1	The β -Glucan Receptor-Dectin-1	36
3.3	Complex Forming Ability	39
3.4	Cytotoxicity of Cyclic β -(1,2)-Glucan	39
	References	39
4	Analytical Tools for the Characterization of Cyclic β-Glucan	43
4.1	Silica Gel Thin-Layer Chromatography	43
4.2	Degree of Polymerization	44
4.3	Compositional Analysis of Periplasmic Glucan	44
4.4	Glycosidic-Linkage Analysis	44
4.5	Arrangement of Linkages	45
4.6	Protons and Carbons in Glucan	48
4.7	Molecular Weight	48
4.8	Functional Groups in Cyclic β -Glucans	49
4.9	Supramolecular Structure	49
4.10	Separation of Mixture of Cyclic- β -Glucan in HPLC	49
4.11	CHN Analysis	50
	References	51
5	Production of Cyclic β-Glucans	53
5.1	Osmolarity Condition	53
5.2	Medium Details	57
5.3	Optimization of Medium with Mannitol	58
5.4	Effect of Media Components and Operating Conditions	59
5.4.1	Carbon	59
5.4.2	Nitrogen	59
5.4.3	Temperature	59
5.4.4	Salt and pH	60
	References	60
6	Extraction and Purification of Cyclic β-Glucan	63
6.1	Extraction of Cyclic β -Glucan from Culture Filtrate	63
6.2	Isolation and Purification of Osmoregulated Periplasmic Glucans	64
6.3	Isolation and Purification of Algal Cyclic Glucans	65
6.4	Purification of Cyclic Glucan from Yeast	66
6.5	Purification Using Column Chromatography	67
	References	68

7	Mechanism of Cyclic β-Glucan Production	71
7.1	Genes Responsible for the Synthesis of Cyclic β -(1,2)-Glucan in Rhizobiaceae and Agrobacteriaceae	71
7.1.1	Genes Responsible for the Production of Cyclic β -(1,3) Glucan	73
7.1.2	Genes Responsible for the Production of Cyclic β -(1,3)-(1,6)-Glucan	73
7.1.3	Genes Responsible for the Production of Cyclic β -(1,6)-(1,3)-Glucan	74
7.2	Genes of Periplasmic Glucans (PGs) of the Proteobacteria	74
7.3	Metabolic Pathway of Carbohydrate Metabolism	78
7.4	Enzymes Involved in Cyclic β -(1,2)-Glucan Synthesis	79
7.4.1	Cyclic β -Glucan Synthase	79
7.4.2	β -(1,3), β -(1,6)-(1,3), and β -(1,3)-(1,6) Glucosyltransferase	81
7.4.3	Enzymes Involved in β -Glucan Degradation	83
	References	83
8	Conclusions	89

Cyclic β -Glucans from Microorganisms
Production, Properties and Applications
Venkatachalam, G.; Narayanan, S.; Doble, M.
2013, XI, 90 p. 23 illus., Softcover
ISBN: 978-3-642-32994-4
