1	Introduction and Theoretical Background	1
1.1	Physics at Hadron Colliders	1
1.1.1	The Parton Model and Perturbative QCD	2
1.1.2	The Factorization Theorem	2
1.1.3	Non-perturbative Effects	3
1.1.4	Renormalization, Factorization, and Fragmentation Scales	5
1.2	Photon Physics	5
1.2.1	Testing Perturbative QCD	5
1.2.2	The Search for the Higgs Boson	6
1.2.3	Physics Beyond the Standard Model	7
1.3	Prompt Photon Production	8
1.4	Isolated Prompt Photons	9
1.5	Predictive Tools	11
1.5.1	JETPHOX	11
1.5.2	PYTHIA	11
1.5.3	HERWIG	12
1.5.4	SHERPA	12
1.6	Previous Results	12
1.7	Outline of the Current Work	14
	References	15
2	The Large Hadron Collider and the ATLAS Detector	17
2.1	The Large Hadron Collider	17
2.1.1	Design	18
2.1.2	Running Conditions in 2010	19
2.2	The ATLAS Detector	19
2.2.1	Coordinate System	20
2.2.2	Inner Tracker	22
2.2.3	Calorimetry	32

2.2.4	Trigger	36
2.2.5	Luminosity	38
	References	39
3	Data Samples and Event Selection.	41
3.1	Data Samples.	41
3.2	Monte Carlo Samples	41
3.3	Run and Event Selection	43
3.4	Trigger Requirements	44
3.5	Definition of the Measurement.	44
	References	44
4	Reconstruction and Identification of Prompt Photons.	45
4.1	Photon Reconstruction	45
4.1.1	Photon Conversions	46
4.1.2	Cluster Calibration	48
4.2	Photon Identification	49
4.2.1	Discriminating Variables.	49
4.2.2	Loose Selection Criteria	52
4.2.3	Tight Selection Criteria	53
4.3	Isolation	55
4.3.1	Definition	55
4.3.2	Corrections for Lateral Leakage.	57
4.3.3	Corrections for Pileup and Non-perturbative Effects.	59
4.3.4	Corrected Calorimeter Isolation	60
4.3.5	Monte Carlo Truth Information	61
	References	62
5	Measurement of the Reconstruction, Identification, and Trigger Efficiencies	65
5.1	Reconstruction Efficiency	65
5.2	Identification Efficiency	66
5.2.1	Shower Shape Correction Factors	67
5.2.2	Extrapolation from Electrons.	69
5.3	Trigger Efficiency	72
5.4	Systematic Uncertainties	73
5.4.1	MC Sample Composition	74
5.4.2	EM Calorimeter Effects	74
5.4.3	Inner Tracker Material Effects.	75
5.4.4	Conversion Classification	75
5.4.5	Pileup Effects	76
5.4.6	Uncertainties on the Shifted-Shower-Shape Method	77
5.4.7	Final Efficiency Systematics	79
	References	79

6	Background Estimation	81
6.1	Background Models	81
6.2	Isolation Template Fits	82
6.2.1	Extraction of the Templates	82
6.2.2	Extraction of the Signal Yield	87
6.2.3	Systematic Uncertainties	88
6.2.4	Results	89
6.3	Sideband Approach	96
6.3.1	Accounting for Correlations	99
6.3.2	Extraction of the Signal Yield	99
6.3.3	Systematic Uncertainties	99
6.3.4	Results	100
6.4	Comparison of Template-Fit and Sideband Techniques	101
6.5	Electron and Non-collision Backgrounds	101
6.5.1	Mis-Identified Electrons	101
6.5.2	Cosmic Rays	102
6.5.3	Beam Gas and Beam Halo	104
	References	104
7	Measurement of the Inclusive Isolated Prompt Photon	
	Cross Section and Evaluation of Systematic Uncertainties	105
7.1	Definition of the Cross Section	105
7.2	Unfolding the Observed Spectrum	105
7.2.1	Systematic Uncertainties	108
7.3	Additional Sources of Systematic Uncertainty	110
7.3.1	Luminosity Uncertainty	110
7.3.2	Signal Yield Stability Over Different Run Periods	110
7.4	Total Systematic Uncertainty	110
	References	111
8	Results of the Measurement and Comparison with Predictions	113
8.1	JETPHOX Predictions	113
8.1.1	Systematic Uncertainties	114
8.2	Measured Cross Section	115
	References	118
9	Extending the Measurement with a Larger Data Set	119
9.1	Data Samples	119
9.2	Event Selection	120
9.3	Measurement of the Cross Section	122
9.3.1	Efficiency	122
9.3.2	Signal Yield	123
9.3.3	Unfolding	130
9.4	Total Systematic Uncertainty	130

9.5	Results	136
	References	137
10	Conclusion	139
	References	144

Photon Physics at the LHC

A Measurement of Inclusive Isolated Prompt Photon
Production at $\sqrt{s} = 7$ TeV with the ATLAS Detector

Hance, M.

2013, XII, 144 p., Hardcover

ISBN: 978-3-642-33061-2
