

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Quasi-Stationary Distributions	1
1.2	Markov Chains	2
1.3	Diffusions	7
1.4	Dynamical Systems	9
<b>2</b>	<b>Quasi-Stationary Distributions: General Results</b>	17
2.1	Notation	17
2.2	Killed Process and QSD	18
2.3	Exponential Killing	19
2.4	Independence Between the Exit Time and the Exit State	21
2.5	Restricting the Exit State	22
2.6	Characterization of QSD by the Semigroup	24
2.7	Continuity Assumptions	26
<b>3</b>	<b>Markov Chains on Finite Spaces</b>	31
3.1	Existence of a QSD	31
3.2	The Chain of Trajectories That Survive Forever	34
3.3	Symmetric Case	36
3.4	Conditions for Lumping	38
3.5	Example: Finite Killed Random Walk	40
3.6	The Central Limit Theorem for a QSD	42
<b>4</b>	<b>Markov Chains on Countable Spaces</b>	45
4.1	The Minimal Process	45
4.2	The Exponential Killing Condition	47
4.3	The Infinitesimal Characterization of a QSD	48
4.4	Conditions for Existence of a QSD	52
4.4.1	The Resurrected Process	53
4.4.2	The Proof	54
4.5	Kingman's Parameter and Exponential Rate of Survival	57
4.6	Symmetric Case	62

4.7	Comparison of Exponential Rates for a Monotone Process . . . . .	66
<b>5</b>	<b>Birth-and-Death Chains . . . . .</b>	<b>69</b>
5.1	Parameters for the Description of the Chain . . . . .	69
5.2	Polynomials, Representation and Duality . . . . .	72
5.3	Structure of the Set of QSDs . . . . .	79
5.4	The Quasi-limiting Distribution . . . . .	83
5.5	The Survival Process and Its Classification . . . . .	85
5.6	Comparison of QSDs . . . . .	93
5.7	Action on $\ell^2_\pi$ and Discrete Spectrum . . . . .	95
5.8	The Process Conditioned to Hitting Barriers . . . . .	104
5.9	Examples . . . . .	105
5.9.1	The Random Walk . . . . .	105
5.9.2	The Linear Birth-and-Death Chain . . . . .	106
5.9.3	The $M/M/\infty$ Queue . . . . .	106
5.10	Structured Birth-and-Death Processes with Mutations . . . . .	107
<b>6</b>	<b>Regular Diffusions on <math>[0, \infty)</math> . . . . .</b>	<b>113</b>
6.1	Hypotheses and Notations . . . . .	113
6.1.1	QSDs on a Bounded Interval . . . . .	117
6.2	QSDs on $[0, \infty)$ . . . . .	126
6.2.1	Existence and Regularity of a Kernel with Respect to $\mu$ . . . . .	130
6.2.2	A Ratio Limit for the Diffusion on $(0, \infty)$ . . . . .	139
6.2.3	The Case $\Lambda(\infty) < \infty$ . . . . .	140
6.2.4	The Case $\Lambda(\infty) = \infty$ . . . . .	142
6.3	Characterization of the QSD Family . . . . .	157
6.4	$h$ -Processes Associated to $X$ . . . . .	159
6.5	$R$ -Positivity for $X$ . . . . .	162
6.5.1	$R$ -Classification . . . . .	167
6.6	Domain of Attraction for a QSD . . . . .	179
6.7	Examples . . . . .	191
6.7.1	Drift Eventually Constant . . . . .	191
6.7.2	$\bar{x}$ Can Be $R$ -Positive . . . . .	195
6.7.3	$\bar{x} = \infty$ for Some Bounded Drifts . . . . .	195
<b>7</b>	<b>Infinity as Entrance Boundary . . . . .</b>	<b>197</b>
7.1	Introduction . . . . .	197
7.2	Basic Properties of $X$ . . . . .	198
7.3	Spectral Theory . . . . .	200
7.4	Sufficient Conditions for Integrability of $\psi_1$ . . . . .	204
7.5	QSD and Yaglom Limit . . . . .	208
7.5.1	Speed of Convergence to the Yaglom Limit . . . . .	211
7.6	The $Q$ -Process . . . . .	213
7.7	Uniqueness of QSD . . . . .	214
7.8	Examples . . . . .	221
7.8.1	A Biological Model . . . . .	221
7.8.2	Shiryaev Martingale . . . . .	222

<b>8</b>	<b>Dynamical Systems</b>	227
8.1	Some General Results	227
8.1.1	Counterexamples	231
8.2	Gibbs Measures and QSDs	231
8.2.1	Notations and Gibbs Measures	232
8.2.2	Gibbs QSD	236
8.3	Pianigiani–Yorke QSD	249
8.3.1	An Application to the Newton Method	262
8.4	Other Results	266
8.4.1	Other Proofs	266
8.4.2	Absolutely Continuous QSD	267
8.4.3	Properties of a QSD	267
8.4.4	Decay of Probabilities	267

Quasi-Stationary Distributions

Markov Chains, Diffusions and Dynamical Systems

Collet, P.; Martínez, S.; San Martín, J.

2013, XVI, 280 p., Hardcover

ISBN: 978-3-642-33130-5
