Part I Discrete Shape Analysis

1	Modeling Three-Dimensional Morse and Morse-Smale Complexes	3
	Lidija Čomić, Leila De Floriani, and Federico Iuricich	
1.1	Introduction	3
1.2	Background Notions	5
1.3	Related Work	9
1.4	Representing Three-Dimensional Morse and Morse-Smale Complexes	10
1.4.1	A Dimension-Independent Compact Representation for Morse Complexes	10
1.4.2	A Dimension-Specific Representation for 3D Morse-Smale Complexes	13
1.4.3	Comparison	14
1.5	Algorithms for Building 3D Morse and Morse-Smale Complexes	15
1.5.1	A Watershed-Based Approach for Building the Morse Incidence Graph	15
1.5.2	A Boundary-Based Algorithm	18
1.5.3	A Watershed-Based Labeling Algorithm	19
1.5.4	A Region-Growing Algorithm	20
1.5.5	An Algorithm Based on Forman Theory	21
1.5.6	A Forman-Based Approach for Cubical Complexes	22
1.5.7	A Forman-Based Approach for Simplicial Complexes	24
1.5.8	Analysis and Comparison	25
1.6	Simplification of 3D Morse and Morse-Smale Complexes	26
1.6.1	Cancellation in 3D	27
1.6.2	Removal and Contraction Operators	29
1.7	Concluding Remarks	31
	References	32

2	Geodesic Regression and Its Application to Shape Analysis	35
	P. Thomas Fletcher	
2.1	Introduction	35
2.2	Multiple Linear Regression	36
2.3	Geodesic Regression	37
2.3.1	Least Squares Estimation	38
2.3.2	R^2 Statistics and Hypothesis Testing	40
2.4	Testing the Geodesic Fit	41
2.4.1	Review of Univariate Kernel Regression	43
2.4.2	Nonparametric Kernel Regression on Manifolds	44
2.4.3	Bandwidth Selection	44
2.5	Results: Regression of 3D Rotations	45
2.5.1	Overview of Unit Quaternions	45
2.5.2	Geodesic Regression of Simulated Rotation Data	45
2.6	Results: Regression in Shape Spaces	46
2.6.1	Overview of Kendall's Shape Space	47
2.6.2	Application to Corpus Callosum Aging	48
2.7	Conclusion	51
	References	51
3	Segmentation and Skeletonization on Arbitrary Graphs	
	Using Multiscale Morphology and Active Contours	53
	Petros Maragos and Kimon Drakopoulos	
3.1	Introduction	53
3.2	Multiscale Morphology on Graphs	55
3.2.1	Background on Lattice and Multiscale Morphology	55
3.2.2	Background on Graph Morphology	57
3.2.3	Multiscale Morphology on Graphs	60
3.3	Geodesic Active Contours on Graphs	61
3.3.1	Constant-Velocity Active Contours on Graphs	63
3.3.2	Direction of the Gradient on Graphs	64
3.3.3	Curvature Calculation on Graphs	67
3.3.4	Convolution on Graphs	68
3.3.5	Active Contours on Graphs: The Algorithm	69
3.4	Multiscale Skeletonization on Graphs	70
3.5	Conclusions	72
	References	74
4	Refined Homotopic Thinning Algorithms and Quality	
	Measures for Skeletonisation Methods	77
	Pascal Peter and Michael Breuß	
4.1	Introduction	77
4.2	Algorithms	79
4.2.1	New Algorithm: Flux-Ordered Adaptive Thinning (FOAT)	80
4.2.2	New Algorithm: Maximal Disc Thinning (MDT)	81

4.3	Analysis of MAT Algorithms	82
4.3.1	Quality Criteria	83
4.3.2	Graph Matching for Invariance Validation	84
4.4	Experiments	85
4.5	Conclusions.....	90
	References.....	90
5	Nested Sphere Statistics of Skeletal Models	93
	Stephen M. Pizer, Sungkyu Jung, Dibyendusekhar Goswami, Jared Vicory, Xiaojie Zhao, Ritwik Chaudhuri, James N. Damon, Stephan Huckemann, and J.S. Marron	
5.1	Object Models Suitable for Statistics.....	94
5.2	Skeletal Models of Non-branching Objects	95
5.3	Obtaining s-Reps Suitable for Probabilistic Analysis	98
5.3.1	Fitting Unbranched s-Reps to Object Description Data	99
5.3.2	Achieving Correspondence of Spoke Vectors	102
5.4	The Abstract Space of s-Reps and Common Configurations of s-Rep Families in that Space.....	103
5.4.1	The Abstract Space of s-Reps	103
5.4.2	Families of s-Rep Components on Their Spheres	104
5.5	Training Probability Distributions in Populations of Discrete s-Reps	104
5.5.1	Previous Methods for Analyzing Data on a Sphere	104
5.5.2	Training Probability Distributions on s-Rep Components Living on Spheres: Principal Nested Spheres.....	107
5.5.3	Compositing Component Distributions into an Overall Probability Distribution	108
5.6	Analyses of Populations of Training Objects	110
5.7	Extensions and Discussion.....	112
	References.....	113
6	3D Curve Skeleton Computation and Use for Discrete Shape Analysis	117
	Gabriella Sanniti di Baja, Luca Serino, and Carlo Arcelli	
6.1	Introduction.....	117
6.2	Notions and Definitions	121
6.2.1	Distance Transform.....	122
6.2.2	Centers of Maximal Balls and Anchor Points	124
6.3	The Curve Skeleton	125
6.3.1	Final Thinning and Pruning	126
6.4	Object Decomposition	128
6.4.1	Skeleton Partition	129
6.4.2	Simple Regions, Bumps and Kernels	129
6.4.3	Merging	131

6.5	Discussion and Conclusion	132
	References	134
7	Orientation and Anisotropy of Multi-component Shapes	137
	Joviša Žunić and Paul L. Rosin	
7.1	Introduction	138
7.2	Shape Orientation	138
7.3	Orientation of Multi-component Shapes	142
	7.3.1 Experiments	146
7.4	Boundary-Based Orientation	149
	7.4.1 Experiments	151
7.5	Anisotropy of Multi-component Shapes	152
7.6	Conclusion	156
	References	156

Part II Partial Differential Equations for Shape Analysis

8	Stable Semi-local Features for Non-rigid Shapes	161
	Roe Litman, Alexander M. Bronstein, and Michael M. Bronstein	
8.1	Introduction	162
	8.1.1 Related Work	162
	8.1.2 Main Contribution	163
8.2	Diffusion Geometry	163
	8.2.1 Diffusion on Surfaces	164
	8.2.2 Volumetric Diffusion	165
	8.2.3 Computational Aspects	166
8.3	Maximally Stable Components	167
	8.3.1 Component Trees	168
	8.3.2 Maximally Stable Components	168
	8.3.3 Computational Aspects	169
8.4	Weighting Functions	169
	8.4.1 Scale Invariance	170
8.5	Descriptors	171
	8.5.1 Point Descriptors	171
	8.5.2 Region Descriptors	172
8.6	Results	173
	8.6.1 Datasets	173
	8.6.2 Detector Repeatability	176
	8.6.3 Descriptor Informativity	182
8.7	Conclusions	187
	References	187
