Part I Macroscopic Techniques

1	Contact Angle and Wetting Properties	3
	Yuehua Yuan and T. Randall Lee	
1.1	Introduction	3
1.2	Theoretical Background	4
1.2.1	Surface Tension and Contact Angle—Young’s Equation	4
1.2.2	Contact Angle Hysteresis	5
1.3	Experimental Setup and Method	7
1.3.1	Direct Measurement by Telescope-Goniometer	7
1.3.2	Captive Bubble Method	10
1.3.3	Tilting Plate Method	10
1.3.4	Wilhelmy Balance Method	11
1.3.5	Capillary Rise at a Vertical Plate	13
1.3.6	Individual Fiber	13
1.3.7	Capillary Tube	14
1.3.8	Capillary Penetration Method for Powders and Granules	15
1.3.9	Capillary Bridge Method	16
1.4	Applications of the Technique	17
1.5	Recent Developments of the Technique	19
1.5.1	Drop Shape Analysis	19
1.5.2	Axisymmetric Drop Shape Analysis (ADSA)	20
1.5.3	Contact Angle Measurement of Ultrasmall Droplets	22
1.6	Summary	28
	References	29
2	Adsorption Calorimetry on Well-Defined Surfaces	35
	Ole Lytken, Hans-Jörg Drescher, Rickmer Kose, and J. Michael Gottfried	
2.1	Introduction	35
2.2	Theory Background	36
2.2.1	Approaches for the Measurement of Adsorption Energies	36

2.2.2	Thermodynamics	37
2.3	Experimental Setup and Method	40
2.3.1	History	40
2.3.2	Single-Crystal Adsorption Calorimeter by D.A. King	41
2.3.3	Single-Crystal Adsorption Calorimeter by C.T. Campbell .	43
2.3.4	Electrochemical Single-Crystal Adsorption Calorimeter by R. Schuster	45
2.4	Applications of the Technique	46
2.4.1	Surface Phase Transitions—CO Adsorption on Pt	46
2.4.2	Reaction Intermediates—Cyclohexene Adsorption on Pt(111)	48
2.4.3	Metal Adsorption on Polymers—Calcium on Poly(3-Hexylthiophene)	49
2.4.4	Particle-Size Dependent Adsorption Energies—CO on Pd .	51
2.5	Future Developments of the Technique	52
	References	53

Part II Optical Techniques

3	Methods of IR Spectroscopy for Surfaces and Thin Films	59
	David Allara and Josh Stapleton	
3.1	Introduction and Scope	59
3.2	Basic Principles of Plane Wave Interactions with Planar Film Stacks and Associated Constraints on Sampling Modes and Surface Characterization Attributes at IR Wavelengths	62
3.2.1	Basic Theory for Low to Moderate Intensity Beams (First Order Scattering Regime)	62
3.2.2	The Interaction of Parallel Plane EM Waves with Planar Film Stacks—Transmission, Reflection and Evanescent Wave Sampling	65
3.2.3	General Characterization Capabilities and Features in the IR Wavelength Region	68
3.3	Quantitative Aspects—Spectral Simulations	71
3.3.1	Spectroscopic Intensities in Terms of the Absorption Properties of Materials	71
3.3.2	Electromagnetic Fields in Planar Thin Film Structures	72
3.4	Instrumentation and Operating Conditions	80
3.4.1	Overview	80
3.4.2	Typical Components	81
3.4.3	Major Sampling Modes and Typical Associated Sampling Conditions and Requirements	84
3.4.4	Typical Signal/Noise Characteristics	85
3.5	Application Examples	87
3.5.1	Transmission	88
3.5.2	Reflection	89
3.5.3	External Reflection	89

3.5.4	Examples of Spectral Simulations and Quantitative Analyses of Spectra	92
3.6	Future Directions	96
	References	97
4	A Surface Scientist's View on Spectroscopic Ellipsometry	99
	Maurizio Canepa	
4.1	Introduction	99
4.2	Basics on Principles, Methods and Systems	100
4.2.1	The Fundamental Relation of Ellipsometry: Ψ and Δ . . .	101
4.2.2	The Prototypical System: Isotropic Thin Film on a Substrate	102
4.2.3	Ultrathin Films and Monolayers	107
4.3	Instrumentation and Experimental Configurations	109
4.3.1	Basic SE Instruments	109
4.3.2	In-situ Real-Time Measurements	112
4.3.3	Null Ellipsometry and Imaging	114
4.4	A Survey of Applications of Spectroscopic Ellipsometry to Ultrathin Films and Other Nanosystems	115
4.4.1	Ultrathin Films: Inorganic Dielectrics (Mainly Oxides) . . .	115
4.4.2	Ultrathin Films: Organic and Biologic Films	117
4.4.3	Nanostructures	122
4.4.4	Graphene	126
4.5	Concluding Remarks	127
	References	127
5	Nonlinear Vibrational Spectroscopy	137
	Lee J. Richter	
5.1	Introduction	137
5.2	Fundamentals	138
5.2.1	Nonlinear Polarization	138
5.2.2	The Susceptibility	140
5.3	Experimental Considerations	143
5.3.1	Experimental Configuration	143
5.3.2	Laser Sources	145
5.4	Data Treatment	150
5.4.1	Normalization	150
5.4.2	Spectral Analysis	151
5.5	Examples	153
5.6	Future	157
	References	158
Part III X-Ray Techniques		
6	Grazing Incidence X-Ray Diffraction	165
	Osami Sakata and Masashi Nakamura	
6.1	Introduction	165
6.2	Theory and Background	167

6.2.1	Real-Space Geometry and Reciprocal-Space Scans Used for Surface X-Ray Diffraction	167
6.2.2	Structure Factor	170
6.2.3	Outline of Data Collection for Structure Determination	172
6.2.4	From Measured Intensities to Structure Factors	172
6.2.5	Structural Analysis	173
6.2.6	Effect of Number of Measured Structure Factors	176
6.3	Experimental Setup and Method	176
6.3.1	Beamline Components	176
6.3.2	X-Ray Source and Optics	177
6.3.3	Examples of Diffractometers	178
6.4	Applications	181
6.4.1	Interface Atomic Structures: Electric Double Layer at the Solid Electrode	181
6.4.2	Quick Evaluation of Thin Film Structure: Identification of Crystal Symmetry of an Epitaxial Thin Film	183
6.5	Conclusions	189
	References	189
7	X-Ray Reflectivity	191
