

Contents

1	Synthesis of Elemental Boron and Its Refractory Compounds by Self-Propagating High-Temperature Synthesis with Metallothermic Reduction	1
1.1	Self-Propagating High-Temperature Synthesis	1
1.2	Methods for Production of Boron	4
1.3	Thermodynamic Analysis of Synthesis Reactions of Elemental Boron, Boron Carbide, and Boron Nitride	6
1.4	SHS of Elemental Boron at Combustion in the $\text{KBF}_4\text{--Mg}$ and $\text{KBF}_4\text{--Al}$ Systems	17
1.5	Properties of Boron Produced by SHS	21
1.5.1	Structure of Boron	21
1.5.2	Electron Microscopic Analysis of Synthesized Boron . . .	24
1.5.3	Thermal Analysis of Boron Powders	28
1.6	SHS of Boron Carbide and Nitride	28
1.6.1	SHS of Boron Carbide from KBF_4	28
1.6.2	SHS of Boron Nitride from KBF_4	30
1.7	Method for Production of Elemental Boron and Boron Carbide from KBF_4	33
1.8	Gradient Composite Material $\text{B}_4\text{C--Al}_2\text{O}_3\text{--Ni}$	36
	References	40
2	Hard Titanium and Zirconium Boride Alloys and Items Manufactured from Them by SHS Compaction	43
2.1	Items Produced from Borides as an Alternative to Tungsten-Based Alloys	43
2.2	Transition Metal Borides	45
2.3	Structure of Powders	47

2.4	Effect of the Charge Particle Size on SHS	53
2.5	Reagents and Manufacturing Process for Production of Hard Alloys Based on Titanium and Zirconium Borides.	57
2.6	Pattern Formation of Final Combustion Product for the Zr–B and Ti–B Systems.	59
2.7	Physical–Chemical and Mechanical Properties of Hard Alloys Based on Titanium and Zirconium Borides.	63
2.7.1	Bending Strength and Ultimate Compression Strength. . .	63
2.7.2	Hardness	64
2.7.3	Thermal Stability	64
2.7.4	Heat Resistance	66
2.7.5	Corrosion Resistance	69
2.7.6	Electroconductivity	70
2.7.7	Thermal Conductivity	72
2.7.8	Temperature Dependence of STIM-4 and TiB Thermal Expansion Coefficients.	73
2.8	Laboratory and Factory Tests for Wear Resistance of Hard Alloys	75
	References	78
3	Production and Analysis of TiB₂-Based Hard Alloys	83
3.1	Choice of Particle Size for the Metal Binder Reagent	83
3.2	Analysis of Final Products	85
3.3	Physical–Mechanical Properties of TiB ₂ –Ti and TiB ₂ –St45 Hard Alloys	88
3.3.1	Bending and Ultimate Compression Strength	88
3.3.2	Hardness	90
3.3.3	Wear Resistance	90
3.3.4	Thermal Stability	91
3.3.5	Heat Resistance	92
3.3.6	Temperature Dependence of the Thermal Expansion Coefficient	94
3.3.7	Factory Testing of TiB ₂ -Based Hard Alloy Parts	95
	References	96
4	Macrokinetics of Degassing During SHS	99
4.1	An Experimental Approach to the Study of Macrokinetics of Degassing.	99
4.2	Infiltration Characteristics of Sample	101
4.3	Gas Evolution in the Ta–C and Ti–C Systems	103
4.4	Locating the Source of Gas Evolution	104
4.5	Effect of Degassing on Combustion Velocity	107
	References	109

5	Macrokinetics of SHS Compaction	111
5.1	Characteristic Times of SHS Compaction	111
5.1.1	Hard Alloy Compaction Time	112
5.1.2	Hard Alloy Cooling Time	113
5.2	Effect of the Charge Size	114
5.3	SHS Compaction of Hard Alloy Consisting of Refractory Compounds	116
5.4	SHS Compaction of Hard Alloy Consisting of Refractory Compound and Metal Binder	118
	References	122
6	Use of SHS Compaction for Manufacture of Hard Alloy Parts with Metal Bands	123
6.1	Band Fitting Procedure	123
6.2	Thermodynamic Estimates and Experimental Data on the Ti–B System Combustion Temperature	127
6.3	Calculation of the Reaction Mixture/Metal Band Weight Ratio	128
6.4	Calculation of the Geometry of the Hard Alloy–Metal Band System	130
6.5	Calculation of Stresses Taking Place in the “Hard Alloy–Metal Band” System	131
6.6	Factory Testing of Hard Alloy Parts with Metal Bands	134
	References	135
	Appendix: New Data on Mechanism of SHS in Systems with Melting Components: Combustion of Layered Systems	137
	Index	153

Production of Advanced Materials by Methods of
Self-Propagating High-Temperature Synthesis

Tavadze, G.F.; Shteinberg, A.

2013, XIX, 156 p. 106 illus., Softcover

ISBN: 978-3-642-35204-1
