

Contents

1	Evolving Conceptions of Time in the Light of Scientific Discoveries	1
1.1	Introduction.	1
2	Time and Cosmology	7
2.1	Greek Astronomy.	7
2.2	Plato and Aristotle	8
2.3	The Need for Physical Time	12
2.3.1	Saint Augustine (354–430 AD.).	13
2.3.2	David Hume (1711–1776) and John Locke (1632–1704)	17
2.4	Kant’s Cosmology	20
2.5	Time and Causality	22
2.5.1	Immanuel Kant (1724–1804).	23
2.5.2	Gottfried W. Leibniz (1646–1716).	26
2.6	The Topology of Time	27
2.6.1	Linearity of Time	30
2.6.2	Closed Time	37
2.7	The Metric of Time	41
2.8	Some Advances in the Theory of Time in Classical Physics . . .	46
2.8.1	Galileo’s Physical Time	46
2.8.2	Newton’s Mathematical Time	48
2.8.3	Newton and Leibniz, Compared	51
2.8.4	The Arrow of Time	54
2.8.5	Maxwell’s Demon	60
2.9	Time in Modern Physics	62
2.9.1	The Measurement of Time in the Special Theory of Relativity	62
2.9.2	Invariants of Space–Time: Speed of Light	67
2.9.3	Further Invariants in Space–Time	69

2.9.4	The Measurement of Time in the General Theory of Relativity.	72
2.10	The Measurement of Time in Quantum Mechanics	74
2.11	Why Measurement?	80
2.12	On Permissible Inferences from Scientific Theories	84
3	Flux and Stasis	89
3.1	Parmenidean Stasis and Heraclitean Flux	89
3.2	Idealism About Time	91
3.2.1	Saint Augustine (A.D 354–430).	91
3.2.2	Immanuel Kant (1724–1804).	93
3.2.3	John McTaggart (1866–1925)	97
3.3	Realism About Time	99
3.3.1	Isaac Barrow (1630–1677)	99
3.3.2	Isaac Newton (1642–1727)	101
3.3.3	Newtonian and Neo-Newtonian (Galilean) Space–Time	107
3.4	Relationism About Time.	111
3.4.1	Relationism According to Leibniz	112
3.4.2	The Geometry of Situations	114
3.4.3	The Order of Succession.	116
3.4.4	Leibnizian Space–Time	118
3.4.5	Possible Orders of Succession and Coexistence.	120
3.5	The Theory of Relativity and the Block Universe	122
3.5.1	The Time Machine	123
3.5.2	Einstein and the Block Universe	124
3.5.3	The Block Universe	129
3.6	Minkowski Spacetime and the Block Universe	130
3.6.1	Minkowski Space–Time	130
3.6.2	The Philosophy of Being	136
3.7	An Alternative Representation of Minkowski Space–Time	141
3.7.1	Alfred Arthus Robb’s Account	142
3.7.2	Constantin Carathéodory’s Account	143
3.8	Space–Time and Invariance.	145
3.8.1	Invariant Relationships c and ds	145
3.8.2	Thermodynamic Clocks	150
3.8.3	Philosophy of Becoming.	154
3.9	The General Theory of Relativity	155
3.9.1	Gödel’s Argument for the Unreality of Time	160
3.9.2	Thermodynamic and Cosmological Arrows.	162
3.10	Substantivalism and Relationism About Space–Time	165

4	Symmetry and Asymmetry	169
4.1	Fundamental Equations and Human Experience	169
4.2	Entropy and Order	172
4.3	Reversibility and Irreversibility	182
4.4	The Role of Boundary Conditions	186
4.4.1	The Asymmetry of Boundary Conditions	189
4.4.2	The Sectional Nature of Time	193
4.4.3	De Facto and De Jure Irreversibility	195
4.4.4	The Law of Conditional Independence	198
4.4.5	The Switch-Over Problem	200
4.4.6	The Symmetry of Boundary Conditions	201
4.5	The Emergence of Time	207
4.6	Time in Basic Quantum Mechanics	211
4.6.1	Spin Echo Experiment	219
4.6.2	Quantum Mechanics and Branching Events	221
4.6.3	Consistent Histories and Decoherence	225
4.6.4	Environmental Decoherence	231
4.6.5	Cosmological Decoherence	235
4.7	Time Travel Scenarios	240
4.7.1	Is it Possible to Travel into the Future?	241
4.7.2	Is it Possible to Travel into the Past?	245
4.7.3	Two Coherent Solutions to Time Travelling into the Past	252
5	Conclusion	257
	Bibliography	261
	Author Index	273
	Subject Index	275

The March of Time

Evolving Conceptions of Time in the Light of Scientific
Discoveries

Weinert, F.

2013, IX, 284 p., Hardcover

ISBN: 978-3-642-35346-8
