

Contents

1	Introduction	1
1.1	Microstructure of Polymers.	2
1.2	Mechanical Behavior	4
1.3	Constructing Structure–Property–Relationship	5
1.4	Structure Analysis by X-ray Scattering.	7
1.5	SAXS Theories	10
1.5.1	Geometry of Scattering	10
1.5.2	From the Scattering Pattern to the Materials Structure.	13
1.6	Objectives and Aims	17
	References	19
2	Experimental Part	23
2.1	SAXS Setup	23
2.2	Thermoplastic Polyurethane Elastomers	24
2.3	Polypropylene/Montmorillonite Nanocomposites	25
2.4	Microfibrillar Composites.	26
	References	27
3	Data Evaluation	29
3.1	Evaluation of Mechanical Parameters.	29
3.2	Evaluation of Scattering Data	31
3.2.1	Pre-evaluation of SAXS Data.	32
3.2.2	Computing CDFs	34
3.2.3	Computing the Scattering Power.	37
3.2.4	Computing Isotropic Scattering.	38
	References	38

4 Thermoplastic Polyurethane Elastomers Under Uniaxial Deformation	39
4.1 Optical Microscopy	39
4.2 DSC Measurements	41
4.3 Mechanical Data	41
4.4 Measured SAXS	42
4.5 Nanostructure in Real Space (CDF)	44
4.6 Macroscopic and Nanoscopic Strain.	46
4.7 Long Period Peaks in the CDF: Analysis of Peak Shape	47
4.7.1 Demonstration of L-Peak Shape Variation	48
4.7.2 Principal Deformation Mechanism	50
4.7.3 Domain Formation, Transformation and Destruction	52
References	56
5 Polypropylene/Montmorillonite Nanocomposites: Continuous Stretching and Load-Cycling	57
5.1 Mechanical Data	57
5.2 Discussion of Measured SAXS Patterns	58
5.3 Discussion of the CDF Patterns.	61
5.4 Analysis of the Block-Structure.	62
5.5 Analysis of the Scattering Power.	63
5.6 Quantitative Analysis of Meridional Peaks	66
5.7 Nucleation and Compatibilization in the PP/MMT Nanocomposites	69
5.8 Load-Cycling Experiments	70
References	77
6 HDPE/PA Microfibrillar Composites Under Load-Cycling.	83
6.1 Micro- Versus Nanostructure	83
6.2 Nanostructure of Undeformed Materials	84
6.3 General Nanostructure Evolution in Load-Cycling Tests	86
6.3.1 Response of Stress and Nanoscopic Strain	87
6.3.2 Response of the Lateral Nanoscopic Strain.	92
6.3.3 Response of the Scattering Power	94
6.4 Plastic Flow in P6HY (20/80/0)	95
6.5 Material Fatigue	95
References	97
7 Summary and Future Works	99
References	102
Curriculum Vitae	103
Index	105

In-situ Small-Angle X-ray Scattering Investigation of
Transient Nanostructure of Multi-phase Polymer
Materials Under Mechanical Deformation

Zeinolebadi, A.

2013, XVI, 106 p., Hardcover

ISBN: 978-3-642-35412-0
