

Contents

- 1 Introduction 1**
- 2 Philosophical Motivations 7**
 - 2.1 What Is a Theory of Physics and What Is It Trying to Achieve? . . 7
 - 2.2 Philosophical Position of Classical Theory 8
 - 2.3 Philosophy Behind Quantum Theory 10
 - 2.4 Conceptual Problems of Quantum Theory 12
- 3 Kochen-Specker Theorem 13**
 - 3.1 Valuation Functions in Classical Theory 13
 - 3.2 Valuation Functions in Quantum Theory 14
 - 3.2.1 Deriving the FUNC Condition 16
 - 3.2.2 Implications of the FUNC Condition 18
 - 3.3 Kochen Specker Theorem 20
 - 3.4 Proof of the Kochen-Specker Theorem 21
 - 3.5 Consequences of the Kochen-Specker Theorem 22
- 4 Introducing Category Theory 25**
 - 4.1 Change of Perspective 25
 - 4.2 Axiomatic Definition of a Category 32
 - 4.2.1 Examples of Categories 34
 - 4.3 The Duality Principle 38
 - 4.4 Arrows in a Category 39
 - 4.4.1 Monic Arrows 40
 - 4.4.2 Epic Arrows 41
 - 4.4.3 Iso Arrows 41
 - 4.5 Elements and Their Relations in a Category 43
 - 4.5.1 Initial Objects 43
 - 4.5.2 Terminal Objects 43
 - 4.5.3 Products 45
 - 4.5.4 Coproducts 48
 - 4.5.5 Equalisers 50

4.5.6	Coequalisers	51
4.5.7	Limits and Colimits	53
4.6	Categories in Quantum Mechanics	59
4.6.1	The Category of Bounded Self Adjoint Operators	59
4.6.2	Category of Boolean Sub-algebras	60
5	Functors	63
5.1	Functors and Natural Transformations	63
5.1.1	Covariant Functors	63
5.1.2	Contravariant Functor	66
5.2	Characterising Functors	67
5.3	Natural Transformations	69
5.3.1	Equivalence of Categories	73
6	The Category of Functors	75
6.1	The Functor Category	75
6.2	Category of Presheaves	76
6.3	Basic Categorical Constructs for the Category of Presheaves	78
6.4	Spectral Presheaf on the Category of Self-adjoint Operators with Discrete Spectra	82
7	Topos	85
7.1	Exponentials	85
7.2	Pullback	89
7.3	Pushouts	92
7.4	Sub-objects	94
7.5	Sub-object Classifier (Truth Object)	100
7.6	Elements of the Sub-object Classifier: Sieves	105
7.7	Heyting Algebras	106
7.8	Understanding the Sub-object Classifier in a General Topos	111
7.9	Axiomatic Definition of a Topos	113
8	Topos of Presheaves	117
8.1	Pullbacks	117
8.2	Pushouts	118
8.3	Sub-objects	119
8.4	Sub-object Classifier in the Topos of Presheaves	120
8.4.1	Elements of the Sub-object Classifier	122
8.5	Global Sections	125
8.6	Local Sections	126
8.7	Exponential	127
9	Topos Analogue of the State Space	131
9.1	The Notion of Contextuality in the Topos Approach	131
9.1.1	Category of Abelian von Neumann Sub-algebras	132
9.1.2	Example	135
9.1.3	Topology on $\mathcal{V}(\mathcal{H})$	136

9.2	Topos Analogue of the State Space	141
9.2.1	Example	143
9.3	The Spectral Presheaf and the Kochen-Specker Theorem	145
10	Topos Analogue of Propositions	147
10.1	Propositions	147
10.1.1	Physical Interpretation of Daseinisation	152
10.2	Properties of the Daseinisation Map	153
10.3	Example	157
11	Topos Analogues of States	163
11.1	Outer Daseinisation Presheaf	164
11.2	Properties of the Outer-Daseinisation Presheaf	164
11.3	Truth Object Option	168
11.3.1	Example of Truth Object in Classical Physics	169
11.3.2	Truth Object in Quantum Theory	169
11.3.3	Example	170
11.4	Pseudo-state Option	173
11.4.1	Example	174
11.5	Relation Between Pseudo-state Object and Truth Object	175
12	Truth Values	177
12.1	Representation of Sub-object Classifier	177
12.1.1	Example	181
12.2	Truth Values Using the Pseudo-state Object	183
12.3	Example	186
12.4	Truth Values Using the Truth-Object	187
12.4.1	Example	188
12.5	Relation Between the Truth Values	189
13	Quantity Value Object and Physical Quantities	191
13.1	Topos Representation of the Quantity Value Object	191
13.2	Inner Daseinisation	193
13.3	Spectral Decomposition	194
13.3.1	Example of Spectral Decomposition	197
13.4	Daseinisation of Self-adjoint Operators	198
13.4.1	Example	201
13.5	Topos Representation of Physical Quantities	206
13.6	Interpreting the Map Representing Physical Quantities	208
13.7	Computing Values of Quantities Given a State	210
13.7.1	Examples	212
14	Sheaves	219
14.1	Sheaves	219
14.1.1	Simple Example	222
14.2	Connection Between Sheaves and Étale Bundles	222
14.3	Sheaves on a Partially Ordered Set	227

14.4	Adjunctions	231
14.4.1	Example	232
14.5	Geometric Morphisms	234
14.6	Group Action and Twisted Presheaves	244
14.6.1	Spectral Presheaf	244
14.6.2	Quantity Value Object	245
14.6.3	Daseinisation	246
14.6.4	Truth Values	246
15	Probabilities in Topos Quantum Theory	249
15.1	General Definition of Probabilities in the Language of Topos Theory	249
15.2	Example for Classical Probability Theory	253
15.3	Quantum Probabilities	258
15.4	Measure on the Topos State Space	259
15.5	Deriving a State from a Measure	262
15.6	New Truth Object	265
15.6.1	Pure State Truth Object	265
15.6.2	Density Matrix Truth Object	266
15.7	Generalised Truth Values	267
16	Group Action in Topos Quantum Theory	273
16.1	The Sheaf of Faithful Representations	273
16.2	Changing Base Category	277
16.3	From Sheaves on the Old Base Category to Sheaves on the New Base Category	278
16.4	The Adjoint Pair	286
16.5	From Sheaves over $\mathcal{V}(\mathcal{H})$ to Sheaves over $\mathcal{V}(\mathcal{H}_f)$	291
16.5.1	Spectral Sheaf	291
16.5.2	Quantity Value Object	293
16.5.3	Truth Values	295
16.6	Group Action on the New Sheaves	299
16.6.1	Spectral Sheaf	300
16.6.2	Sub-object Classifier	301
16.6.3	Quantity Value Object	302
16.6.4	Truth Object	303
16.7	New Representation of Physical Quantities	305
17	Topos History Quantum Theory	307
17.1	A Brief Introduction to Consistent Histories	310
17.2	The HPO Formulation of Consistent Histories	314
17.3	The Temporal Logic of Heyting Algebras of Sub-objects	316
17.4	Realising the Tensor Product in a Topos	320
17.5	Entangled Stages	324
17.6	Direct Product of Truth Values	326
17.7	The Representation of HPO Histories	328

18	Normal Operators	335
18.1	Spectral Ordering of Normal Operators	335
18.1.1	Example	337
18.2	Normal Operators in a Topos	339
18.2.1	Example	341
18.3	Complex Number Object in a Topos	342
18.3.1	Domain-Theoretic Structure	346
19	KMS States	351
19.1	Brief Review of the KMS State	352
19.2	External KMS State	353
19.3	Deriving the Canonical KMS State from the Topos KMS State	359
19.4	The Automorphisms Group	362
19.5	Internal KMS Condition	365
20	One-Parameter Group of Transformations and Stone's Theorem	373
20.1	Topos Notion of a One Parameter Group	373
20.1.1	One Parameter Group Taking Values in the Real Valued Object	376
20.1.2	One Parameter Group Taking Values in Complex Number Object	380
20.2	Stone's Theorem in the Language of Topos Theory	383
21	Future Research	391
21.1	Quantisation	391
21.2	Internal Approach	393
21.3	Configuration Space	393
21.4	Composite Systems	394
21.5	Differentiable Structure	395
Appendix A	Topoi and Logic	397
A.1	First Order Languages	397
A.2	Propositional Language	398
A.2.1	Example in Classical Physics	402
A.3	The Higher Order Type Language l	403
A.4	Representation of l in a Topos	405
A.5	A Language l for a Theory of Physics and Its Representation in a Topos τ	409
A.5.1	The Language $l(S)$ of a System S	409
A.5.2	Representation of $l(S)$ in a Topos	411
A.6	Deductive System of Reasoning for First Order Logic	414
Appendix B	Worked out Examples	419
B.1	Category Theory	419
B.2	Topos Quantum Theory	433
