

Contents

1	Introduction	1
	References	2
2	Selected Topics in Revenue Management	3
2.1	Origins of Revenue Management	3
2.2	Revenue Management Core Ideas	5
2.3	Characteristics of Revenue Management Problems	7
2.3.1	Integration of the External Factors	7
2.3.2	Heterogeneous Customer Behavior	8
2.3.3	Restricted Operational Flexibility of Capacity	8
2.3.4	Standardized Products	9
2.4	Capacity Control Approaches for Airline Revenue Management Problems	10
2.4.1	Single-Leg Capacity Control	10
2.4.2	Network Capacity Control	17
2.4.3	Overbooking	26
	References	27
3	A Review of Strategic Passenger Airline Alliances	31
3.1	Strategic Alliances	31
3.2	Passenger Airline Industry	32
3.2.1	Motivations and Background	32
3.2.2	Operations of Passenger Airline Alliances	34
3.2.3	Literature Review	34
3.3	Other Industries	39
	References	40
4	Selected Topics in Cooperative Game Theory	43
4.1	Defining Game Theory	43
4.2	Cooperative Game Theory	45
4.3	Representation of a Cooperative Game	46
4.4	Properties of Cooperative Games	47

4.5	Properties of Payoff Allocations	48
4.6	Game Theoretical Solution Concepts.....	49
4.6.1	The Core	49
4.6.2	Existence of the Core	52
4.6.3	The ϵ -Core.....	54
4.6.4	The Least-Core	55
4.6.5	The Nucleolus	56
4.6.6	The Kernel.....	61
4.6.7	The Owen Set	62
4.6.8	Shapley Value	64
4.7	Applications of Cooperative Game Theory	66
	References	69
5	Airline Alliance Revenue Management Game	73
5.1	A Linear Programming Formulation	73
5.2	Properties of the Airline Alliance Revenue Management Game	76
5.3	The Core of the Airline Alliance Revenue Management Game.....	78
5.4	The Owen Set of the Airline Alliance Revenue Management Game.....	81
	References	82
6	Approximate Nucleolus-Based Revenue Shares for Airline Alliances	83
6.1	Motivation	83
6.2	Computation of the Nucleolus	84
6.2.1	A Review of Algorithms	84
6.2.2	Lexicographic Minimization	85
6.2.3	A Numerical Example	87
6.3	The Nucleolus of the Airline Alliance Revenue Management Game.....	90
6.3.1	Lexicographic Minimization with a Constraint Generation Procedure	90
6.3.2	A Numerical Example	94
6.4	A Revenue Proration Scheme	97
6.5	Computational Study	98
6.5.1	Medium Sized Networks.....	98
6.5.2	Large Scale Networks.....	101
6.6	The Use of the Nucleolus-Based Allocations as a Benchmark.....	102
6.7	A Small Scale Simulation Study.....	105
	References	108
7	Selfish Revenue Sharing Mechanisms for Airline Alliances	111
7.1	Selfish Revenue Sharing in Airline Alliances	111
7.2	Alliance Revenue Management as Common	112
7.2.1	Selfish Seat Allocation Decisions	112
7.2.2	Simulation of the Booking Process.....	114

7.3	Selfish Revenue Sharing Mechanisms	117
7.3.1	Traveled Distance Heuristic	117
7.3.2	Local Value Heuristic	118
7.3.3	Leg-Based Demand Heuristic	119
7.4	Fairness Evaluation	120
7.5	Computational Study	123
7.5.1	Generation of the Instances	123
7.5.2	Fairness Evaluation Based on the Nucleolus	124
7.5.3	Fairness Evaluation Based on the Owen Set	129
	References	131
8	A Revenue Sharing Mechanism Based on the Transfer of Dual Prices	133
8.1	The Mechanism on Flights Operated by Two Airlines	133
8.1.1	An Illustration by Means of an Example	133
8.1.2	General Process for Flights Involving Two Airlines	140
8.2	The Mechanism on Flights Operated by Three Airlines	144
8.2.1	An Illustration by Means of an Example: Case 1	144
8.2.2	An Illustration by Means of an Example: Case 2	147
8.2.3	General Process for Flights Involving Three Airlines: Case 1	149
8.2.4	General Process for Flights Involving Three Airlines: Case 2	152
8.3	Computational Study	154
	Reference	157
9	Conclusions and Future Research	159
A	Appendix: Computational Studies	163
A.1	Approximate Nucleolus-Based Revenue Shares for Passenger Airline Alliances	163
A.2	Selfish Revenue Sharing Mechanisms for Airline Alliances	165
A.3	A Revenue Sharing Mechanism Based on the Transfer of Dual Prices	167
