

Contents

1	The Bladder as a Dynamic System	1
1.1	Anatomy of the Human Urinary Bladder	1
1.2	Detrusor Muscle	3
1.2.1	Morphology of Smooth Muscle	3
1.2.2	Electromechanical Activity of the Detrusor	4
1.2.3	Pacemaker Activity	6
1.3	Neurohormonal Regulatory System	7
1.3.1	Anatomical Considerations	7
1.3.2	Neurotransmission	9
1.3.3	Electrophysiological Characteristics of Neurons	12
1.4	Morphofunctional States in the Bladder	13
1.4.1	Bladder Filling	13
1.4.2	Bladder Voiding	14
	References	16
2	Investigations into Biomechanics of the Bladder	25
2.1	Biomechanics of the Detrusor	25
2.2	Modeling of the Bladder	31
	References	37
3	Geometry of Thin Shells	41
3.1	The Bladder as a Thin Biological Shell	41
3.2	Geometry of the Shell	42
3.3	Tensor of Affine Deformation	45
3.4	Equations of Continuity of Deformations	48
3.5	Equations of Equilibrium	50
	References	52

4	Essentials of the Theory of Soft Shells	53
4.1	Deformation of the Shell	53
4.2	Principal Deformations	59
4.3	Membrane Forces	62
4.4	Principal Membrane Forces	65
4.5	Equations of Motion in General Curvilinear Coordinates	66
4.5.1	Remarks	69
4.6	Nets	69
4.7	Corollaries of the Fundamental Assumptions	71
	Reference	71
5	Continual Model of the Detrusor	73
5.1	Basic Assumptions	73
5.2	Model Formulation	74
5.3	Biofactor Z_{kl}	79
5.4	Special Cases	82
	References	85
6	A Model of the Detrusor Fasciculus	87
6.1	Formulation of the Model	87
6.2	Physiological Condition	91
6.3	Effects of Pharmacological and Extracellular Ion Changes on Electromechanical Activity of the Detrusor	92
6.3.1	Changes in K_0^+	92
6.3.2	L- and T-type Ca^{2+} Channel Antagonists	93
6.3.3	BK_{Ca} Channel Agonist/Antagonist	95
6.3.4	K^+ Channel Agonist/Antagonist	96
6.3.5	Ca^{2+} -ATPase Inhibitors	99
7	The Intrinsic Regulatory Pathways	107
7.1	Models of Electrical Activity of Neurons	107
7.2	A Model of Neuronal Assembly in the Bladder	109
7.3	Response of the Detrusor to Stretching	112
7.4	Pharmacology of the Neuronal Pathway	114
7.4.1	Effect of Iberiotoxin and Charybdotoxin	114
7.4.2	Effect of ω -CgTX	115
7.4.3	Effect of TTX	115
7.4.4	Effect of Purinoceptor Agonists	115
7.4.5	Effect of Protein Kinase C Activator	116
	References	116

8	The Synaptic Transmission	117
8.1	A Model of the Synapse	117
8.2	cAMP-Dependent Pathway	123
8.3	PLC-Dependent Pathway	125
8.4	Physiological Response	128
8.5	Variations in Synaptic Neurotransmission	129
8.5.1	Chloride Salts of Divalent Cations	130
8.5.2	Change in $[Ca_0^{2+}]$	130
8.5.3	β -Bungarotoxin	130
8.5.4	Botulinum Toxin	130
8.5.5	Tetrodotoxin	131
8.5.6	High-Frequency Stimulation	131
8.5.7	Inhibition of Neuronal Uptake-1 Mechanism	131
	References	132
9	Pharmacology of Detrusor Activity	133
9.1	Classes of Drugs	133
9.2	Current Pharmacological Therapies of Bladder Dysfunction	135
9.3	Model of Competitive Antagonist Action	136
9.4	Model of Allosteric Interaction	138
9.5	Allosteric Modulation of Competitive Agonist/Antagonist Action	140
9.6	Effect of Cholinergic Antagonists/Agonists	142
9.7	Inhibition of Catechol- <i>O</i> -methyltransferase	143
9.8	Effect of β : Adrenoceptor Antagonists	144
	References	145
10	Human Urinary Bladder as a Soft Biological Shell	147
10.1	Basic Assumptions	147
10.2	Model of the Bladder	148
10.3	Bladder Mechanics	153
10.3.1	Filling Stage	153
10.3.2	Voiding Stage	154
10.3.3	Pharmacological Modulation of Voiding	161
11	Challenges in Human Urinary Bladder Mechanics	163
11.1	Urine-Bladder Interaction	163
11.2	Brain-Bladder Axis	167
11.3	Bladder Substitutes	169
	References	171
