

Contents

- 1 Terms and Concepts** 1
 - 1.1 Epidemiology: Exposures and Outcomes 1
 - 1.2 Genetics: Genome, Epigenome, Transcriptome and Proteome 3
 - 1.3 Cognitive Neuroscience: Specialization, Connectivity, Development and Plasticity 5
 - 1.4 Envirome and Phenome 9
 - 1.5 Developmental Cascades 10
 - 1.6 Personalized Preventive Medicine 11
 - References 12

- 2 History of the Key Disciplines** 13
 - 2.1 Epidemiology 13
 - 2.2 Genetics 16
 - 2.3 Cognitive Neuroscience 20
 - References 26

- 3 Enviromics** 29
 - 3.1 Environmental Space 29
 - 3.2 Environment in Time 36
 - 3.3 Interdependencies: Environment, Behaviour and Genes 36
 - References 39

- 4 Genomics** 43
 - 4.1 Chromosomes, Cell Division and Recombination 43
 - 4.2 Genetic Code, Gene Transcription and Translation 47
 - 4.3 DNA Variations 50
 - 4.4 Mapping Genotype-Phenotype Associations: Hypothesis-Driven Approach 52
 - 4.5 Mapping Genotype-Phenotype Associations: Hypothesis-Free Approach 55

4.6	Follow-up of GWAS Findings	60
4.7	Missing Heritability	62
	References	63
5	Epigenomics	67
5.1	Epigenetics: Heritable, Stochastic and Environment-Induced	67
5.1.1	Heritable Modifications	67
5.1.2	Stochastic Instability	69
5.1.3	Environment-Induced Epigenetic Modifications	70
5.2	DNA Methylation and Histone Modifications	71
5.3	Bringing Together Genome and Epigenome	73
	References	76
6	Molecular Phenomics	79
6.1	Transcriptomics	79
6.2	Proteomics, Metabolomics and Lipidomics	83
	References	85
7	Systems Phenomics	87
7.1	Functional and Structural MRI: An Overview	87
7.2	MRI: Basic Principles	91
7.2.1	MR Contrast in Images of Brain Structure	92
7.2.2	MR Contrast in Images of Brain Activity	95
7.3	Structural Brain Phenotypes	98
7.3.1	Density of Brain Tissues	99
7.3.2	Deformation Fields	99
7.3.3	Regional Volumes of Brain Tissues	100
7.3.4	Cortical Thickness and Cortical Folding	101
7.3.5	Diffusion Tensor Imaging	102
7.3.6	Magnetization Transfer Ratio	103
7.3.7	Multi-Modal Analysis	103
7.4	Functional Brain Phenotypes	103
7.5	Assessment of Cognitive Abilities and Mental Health	108
7.5.1	Assessment of Cognitive Abilities	109
7.5.2	Assessment of Mental Health	111
	References	115
8	Cohorts	119
8.1	Case-Control and Cohort Studies: Main Distinctions	119
8.2	MR-Imaging in Cohort Studies	121
8.2.1	MR-Based Cohorts	122
8.2.2	Comparison of the Four Cohorts: Recruitment and Assessments	127

8.2.3	Birth Cohorts with an MR Arm	128
8.3	A Trans-Generational Brain and Body Cohort	130
8.3.1	The Trans-Generational Element	131
8.3.2	The Integrated Brain and Body Element	131
	References	136
9	Challenges	139
9.1	Constructing Hypotheses: Systematic Reviews and Meta-Analyses	139
9.2	Association Versus Causality	143
9.3	Beyond the MR Brain	145
	References	150
10	Personalized Preventive Medicine	153
10.1	Healthy Life Expectancy: Common Chronic Disorders of Brain and Body	153
10.2	Personalized Preventive Medicine.	157
10.2.1	Personalized Medicine.	157
10.2.2	Preventive Medicine	158
10.3	Risk/Resilience Profiling	160
10.3.1	Genetic Profiling	160
10.3.2	Phenotypic Profiling	161
10.4	My Health Trajectory	165
10.5	A Case Study: Delaying Onset of Alzheimer's Disease.	167
	References	172
	Index	175
