

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Conduction Heating of Solid Surfaces</b>	<b>5</b>
2.1	Introduction	5
2.2	Analytical Treatment of Laser Pulse Heating	6
2.2.1	Exponential Pulse Heating	6
2.2.2	Laser Repetitive Pulse Heating	11
2.3	Effect of Duty Cycle on Heating: Numerical Treatment	13
2.4	Discussions	15
2.4.1	Exponential Pulse Heating Case and Convection Condition Resembling Assisting Gas at the Surface	16
2.4.2	Repetitive Pulse Heating Case and Convection Condition Resembling Assisting Gas at the Surface	20
2.4.3	Effect of Duty Cycle on Heating and Convection Condition Resembling Assisting Gas at the Surface	24
	References	27
<b>3</b>	<b>Laser Melting of Solid Surfaces</b>	<b>29</b>
3.1	Introduction	29
3.2	Analytical Treatment of Laser Melting Process	30
3.2.1	The Closed Form Solution	30
3.2.2	Influence of Assisting Gas on the Melt Layer Thickness	32
3.3	Numerical Treatment of Surface Melting	34
3.3.1	Stationary Heating Source	34
3.3.2	Influence of Pulse Profile on Temperature Field	39
3.3.3	Influence of Marangoni Flow on Temperature Field	41
3.3.4	Moving Heat Source Consideration	41

3.4	Discussions . . . . .	43
3.4.1	Analytical Treatment of Laser Melting Process. . . . .	43
3.4.2	Numerical Treatment of Laser Melting . . . . .	44
3.4.3	Influence of Pulse Profile and Marangoni Flow on Temperature Field . . . . .	48
3.4.4	Moving Heat Source Consideration . . . . .	52
	References . . . . .	57
<b>4</b>	<b>Laser Melting of Two Layer Materials . . . . .</b>	<b>59</b>
4.1	Introduction . . . . .	59
4.2	Numerical Treatment of Melting Process . . . . .	60
4.3	Discussions. . . . .	62
4.3.1	Laser Melting of Two-Layer Structure Influence of Laser Pulse Repetition on Temperature and Flow Field in the Melt Pool . . . . .	63
4.3.2	Influence of Coating Material on Temperature and Flow Field in the Melt Pool . . . . .	69
4.3.3	Influence of Coating Material Thickness on Temperature and Flow Field in the Melt Pool . . . . .	75
	References . . . . .	80
<b>5</b>	<b>Laser Induced Evaporation at the Surface . . . . .</b>	<b>81</b>
5.1	Introduction . . . . .	81
5.2	Analytical Treatment of Evaporation . . . . .	82
5.3	Numerical Treatment of Evaporation . . . . .	91
5.4	Numerical Solution of Governing Equations . . . . .	99
5.4.1	Phase Change Process . . . . .	100
5.4.2	Transiently Developing Vapor Jet . . . . .	100
5.5	Discussions. . . . .	101
5.5.1	Solution of Analytical Treatment of Evaporation . . . . .	101
5.5.2	Predictions from Numerical Treatment of Evaporation . . . . .	103
	References . . . . .	110
<b>6</b>	<b>Practical Applications of Laser Surface Treatment . . . . .</b>	<b>111</b>
6.1	Introduction . . . . .	111
6.2	Laser Shock Processing . . . . .	112
6.2.1	Heating, Recoil Pressure, and Wave Analysis. . . . .	113
6.2.2	Method of Solutions . . . . .	116
6.2.3	Experimental . . . . .	117
6.3	Laser Gas Assisted Nitriding. . . . .	118
6.3.1	Thermal and Residual Stress Analysis . . . . .	119
6.3.2	Experimental and Measurement of Young Modulus and Fracture Toughness . . . . .	121

6.4	Laser Surface Treatment of Pre-prepared Alloy . . . . .	123
6.5	Discussion . . . . .	124
6.5.1	Laser Shock Processing of Steel Surface . . . . .	124
6.5.2	Laser Gas Assisted Nitriding of Steel Surfaces . . . . .	127
6.5.3	Laser Surface Treatment of Pre-prepared Ti Alloy . . . . .	131
	References . . . . .	137
<b>7</b>	<b>Concluding Remarks . . . . .</b>	<b>139</b>
7.1	Analytical Treatment for Melting and Evaporation Processes . . .	139
7.2	Numerical Treatment for Melting and Evaporation Processes . . .	140
7.3	Practical Applications . . . . .	143
	<b>Index . . . . .</b>	<b>145</b>
