

Contents

1	Laser Basics	1
1.1	What is a Laser?	1
1.2	Light–Matter Interaction.	2
1.3	Population Inversion	3
1.4	From an Amplifier to an Oscillator	5
1.4.1	Role of the Resonator	5
1.4.2	Spatial Characteristics of the Emitted Laser Beam	6
1.4.3	The Spectrum of a Laser Oscillator.	8
1.5	Oscillation Condition	9
1.6	How to Recognize Lasing?	11
	References	12
2	Fundamentals of Organic Lasers	13
2.1	PI-Conjugated Molecular Systems	14
2.1.1	General Properties.	14
2.1.2	Organic Semiconductors	16
2.2	Photophysical Properties of Pi-Conjugated Systems	20
2.2.1	Absorption of Light by Pi-Conjugated Systems	20
2.2.2	Emission of Light by Pi-Conjugated Systems	29
2.2.3	Jablonski Diagrams	32
2.2.4	Photophysical Parameters Relevant for Organic Lasing	36
2.2.5	Short and Long Wavelength Limits for Organic Lasers	38
2.3	Triplet States and Their Influence on Lasing.	41
2.3.1	Nature of Triplet States	42
2.3.2	The Exchange Energy	44
2.3.3	Optical Generation of Triplet States by Intersystem Crossing.	45
2.3.4	Triplet Absorption.	46
2.3.5	Phosphorescence: Are Triplet Emitters Suitable for Lasing?	47

2.4	Intermolecular Phenomena: Quenching and Energy Transfer. . . .	48
2.4.1	Physical Origin of Quenching/Energy Transfer.	49
2.4.2	Different Mechanisms of Bimolecular Interactions	52
2.5	Equations for Organic Solid-State Lasers	56
2.5.1	An Equation for the Evolution of the Photon Density . .	56
2.5.2	Rate Equations: A Set of Equations Governing the Flow between Different States.	59
2.6	Temporal Dynamics of Organic Solid State Lasers	62
2.6.1	The CW Lasing Condition	62
2.6.2	Maximum Pulsewidth for Organic Lasers	64
2.6.3	Temporal Dynamics Simulations.	65
2.6.4	Is It Better to Characterize Organic Lasers with Fluence (J/cm^2) or Intensity (W/cm^2)?	68
	References	69
3	Organic Materials for Solid-State Lasers	75
3.1	Molecular Materials Suitable for Laser Action	75
3.1.1	Overview of the Different Families of Materials Used in Lasers	75
3.1.2	Towards a Classification of Organic Laser Materials? . .	77
3.1.3	Small-Molecular Dyes	79
3.1.4	Host Materials for Small-Molecular Dyes	83
3.1.5	Organic Semiconductors	85
3.1.6	What is a Good Laser Material?	87
3.2	Materials Characterization	88
3.2.1	Measuring Stimulated Emission: Optical Gain Measurements.	88
3.2.2	Loss Measurements.	93
3.3	Fabrication of Organic Lasing Gain Chips: Bulk Rods and Thin Films	96
3.3.1	Bulk Rods	96
3.3.2	Thin-Films	97
3.4	Photodegradation Issues in Organic Lasers	101
	References	103
4	Organic Lasers Resonators.	107
4.1	Cavities Made with Bulk Rods	107
4.2	Cavities Based on Thin-Films	110
4.2.1	Waveguide Lasers.	111
4.2.2	Microcavities	118
4.2.3	Vertical External Cavity Surface-Emitting Organic Lasers	121
	References	127

5	Novel Concepts for Organic Lasers.	131
5.1	The Organic Laser Diode	132
5.1.1	History of a Long Quest	132
5.1.2	Evidence of Extra-Losses Compared to Optical Excitation	132
5.1.3	The Electrode Issue.	134
5.1.4	The Polaron Issue	135
5.1.5	The Triplet Exciton Issue.	135
5.2	The “Indirect Electrical Pumping” Strategy	137
5.2.1	Laser Diode Pumping	138
5.2.2	Light-Emitting Diode (LED) Pumping.	139
5.3	Towards True Organic CW Lasers: Managing Triplet States.	140
5.4	Organic Lasers at the Nanoscale	142
5.4.1	The “Spaser” and the Advent of Nanoplasmonics	142
5.4.2	Strong Coupling and the Organic Polariton Laser	145
5.4.3	The Photon Bose–Einstein Condensate	146
	References	146
6	Towards Applications of Organic Solid-State Lasers	151
6.1	Toward Real-Life Applications: The Major Issues.	151
6.1.1	Lowering the Threshold.	151
6.1.2	Extending the Wavelength Coverage.	152
6.1.3	Strategies for Advanced Wavelength Tunability	153
6.1.4	Improving the Conversion Efficiency and Output Power.	155
6.1.5	What About Beam Quality?	156
6.1.6	Enhancing the Lifetime of the Devices	157
6.2	Spectroscopy.	158
6.3	Sensing	161
6.4	Telecommunications	162

Organic Solid-State Lasers

Forget, S.; Chénais, S.

2013, XI, 169 p. 88 illus., 78 illus. in color., Hardcover

ISBN: 978-3-642-36704-5
