## Part I Physical Background

<b>1</b>	<b>Physical Background</b>	<b>3</b>
1.1	Forces Arising from Downscaling.	3
1.2	Surface Tension	4
1.3	Important Non Dimensional Numbers and Similitude	5
1.4	Laplace's Law: from Surface Curvature to Surface Tension and Capillary Pressure	6
1.5	Interfacial Energy.	6
1.6	Contact Angles.	6
1.6.1	Wettability: Contact Angle and Young (or Young-Dupré) Equation	7
1.6.2	Contact Angle Hysteresis: Advancing and Receding Contact Angles	8
1.6.3	Dynamic Contact Angle	8
1.7	Control Parameters: Temperature, Surfactants, Electric Fields, Evaporation	13
1.8	Conclusions	13
	References	14

## Part II Static Modelling of Capillary Forces and Torques

<b>2</b>	<b>Axial Capillary Forces</b>	<b>19</b>
2.1	Introduction	19
2.2	Modeling Liquid Bridges Geometry: An Overview.	20
2.2.1	Energetic Method: Example of Two Parallel Plates	20
2.2.2	Introduction to Surface Evolver	23
2.2.3	Exact Resolution for Axially Symmetric Problems	26
2.2.4	Geometrical Models	28

2.3	Pinned and Non Pinned Triple Lines . . . . .	29
2.3.1	Non Pinned Menisci . . . . .	29
2.3.2	Pinned Menisci . . . . .	33
2.4	Conclusions . . . . .	40
	References . . . . .	43
<b>3</b>	<b>Lateral Capillary Forces. . . . .</b>	<b>45</b>
3.1	Introduction and Literature Overview . . . . .	45
3.2	Experimental Measurement of Lateral Capillary Forces. . . . .	48
3.2.1	Requirements and Constraints . . . . .	48
3.2.2	The Sensing Principle . . . . .	49
3.2.3	The Experimental Setup . . . . .	50
3.2.4	Fluids . . . . .	51
3.2.5	Data Processing . . . . .	53
3.3	Modeling of Lateral Capillary Forces . . . . .	54
3.3.1	Analytic Model . . . . .	54
3.3.2	Finite-Element Model . . . . .	56
3.4	Results and Discussion . . . . .	58
3.4.1	Sources of Error. . . . .	59
3.4.2	Hysteresis . . . . .	60
3.5	Conclusions . . . . .	62
	References . . . . .	67
<b>4</b>	<b>Capillary Torque . . . . .</b>	<b>71</b>
4.1	Introduction . . . . .	71
4.2	Experiment . . . . .	72
4.2.1	Materials . . . . .	73
4.2.2	Results . . . . .	77
4.3	Mathematical Analysis . . . . .	82
4.4	Conclusion. . . . .	88
4.5	Appendix. . . . .	89
	References . . . . .	90
<b>5</b>	<b>Surface Tension Effects in Presence of Gas Compliance. . . . .</b>	<b>93</b>
5.1	Introduction . . . . .	93
5.2	Modeling . . . . .	94
5.2.1	Laplace Law . . . . .	94
5.2.2	Surface Tension and Compressibility . . . . .	94
5.2.3	Effect of Compressibility When Generating a Bubble from a Hole . . . . .	96
5.2.4	Pressure Control . . . . .	96
5.2.5	Volume Control . . . . .	97

5.3	Dimensionless Analysis . . . . .	104
5.3.1	Buckingham Theorem . . . . .	104
5.3.2	Dimensionless Equation . . . . .	104
5.3.3	Numerical Approximation . . . . .	106
5.3.4	Analytical Approach . . . . .	107
5.3.5	Stability Criterion . . . . .	111
5.4	Experimental Validation of the Volume Controlled Bubble Generation Model . . . . .	111
5.4.1	First Experimental Setup . . . . .	111
5.4.2	Second Experimental Setup . . . . .	118
5.4.3	Conclusion of Experimental Validation . . . . .	121
5.5	Application to Bubble Robotics . . . . .	121
5.6	Conclusions . . . . .	124
	References . . . . .	125

### Part III Dynamic Modelling of Capillary Forces

<b>6</b>	<b>Introduction . . . . .</b>	<b>129</b>
6.1	Liquid Bridge as Mechanical Joint . . . . .	129
6.2	Equations Governing Fluids . . . . .	132
6.3	Fluid Dynamics Related Boundary Conditions . . . . .	133
6.4	Overview of Next Chapters . . . . .	135
	References . . . . .	136
<b>7</b>	<b>Axial Capillary Forces (Dynamics) . . . . .</b>	<b>137</b>
7.1	Introduction . . . . .	137
7.2	Problem Description and Methodology . . . . .	138
7.3	Mathematical Background of the Kelvin-Voigt Model . . . . .	140
7.4	Stiffness . . . . .	141
7.4.1	Introduction . . . . .	141
7.4.2	Numeric Approach . . . . .	143
7.4.3	Negative Stiffness . . . . .	144
7.4.4	Geometrical Assumptions . . . . .	146
7.5	Damping Coefficient . . . . .	148
7.6	Inertial Effect . . . . .	152
7.7	Case Study and Numeric Validation of the Simplified Kelvin-Voigt Model . . . . .	155
7.8	Gain Curves . . . . .	158
7.9	Experimental Setup . . . . .	162
7.9.1	Experimental Bench . . . . .	163
7.9.2	Experimental Protocol . . . . .	164
7.9.3	Image Processing Towards Geometrical Parameters Acquisition . . . . .	165

7.10	Results . . . . .	165
7.10.1	Experiments List . . . . .	165
7.10.2	Gain and Phase Shift Curves . . . . .	166
7.11	Conclusions . . . . .	168
	References . . . . .	177
<b>8</b>	<b>Lateral Capillary Forces (Dynamics)</b> . . . . .	179
8.1	State of the Art and Definition of the Problem. . . . .	179
8.2	Lateral Stiffness of Liquid Meniscus. . . . .	181
8.3	Coupled Problem Resolution with a Pseudo-Spectral Method Based on Chebyshev Polynomials. . . . .	185
8.4	Results and Discussion . . . . .	187
8.5	Conclusions . . . . .	192
	References . . . . .	192
<b>9</b>	<b>Conclusions</b> . . . . .	195
 <b>Part IV Case Studies</b>		
<b>10</b>	<b>Capillary Micro Motor</b> . . . . .	199
10.1	Introduction . . . . .	199
10.2	Principle and Method . . . . .	201
10.2.1	Principal . . . . .	201
10.2.2	Fabrication. . . . .	202
10.3	Experiments. . . . .	204
10.3.1	Step Motion. . . . .	204
10.3.2	Continuous Rotation . . . . .	207
10.4	Conclusion. . . . .	208
	References . . . . .	209
<b>11</b>	<b>Capillary Based Sealing</b> . . . . .	211
11.1	Introduction . . . . .	212
11.2	Operating Principle and Physics . . . . .	213
11.3	Fabrication Process and Assembly . . . . .	221
11.4	Experimental Section . . . . .	223
11.5	Conclusions and Outlook. . . . .	224
	References . . . . .	225
<b>12</b>	<b>Surface Tension-Driven Self-Assembly</b> . . . . .	227
12.1	Introduction . . . . .	227
12.2	SA at Fluid-Fluid Interfaces. . . . .	229
12.3	Three-Dimensional SA . . . . .	232

12.4	Die-to-Substrate SA . . . . .	234
12.4.1	Stochastic SA. . . . .	234
12.4.2	Hybrid Microhandling. . . . .	243
12.5	SA of Three-Dimensional MEMS. . . . .	246
12.5.1	Capillary Actuation of MEMS . . . . .	246
12.5.2	Self-Assembled Polyhedra . . . . .	246
12.6	Conclusions . . . . .	248
	References . . . . .	249
<b>13</b>	<b>Surface Tension Driven Actuation. . . . .</b>	<b>255</b>
13.1	Introduction . . . . .	255
13.2	Transpiration Actuation. . . . .	256
13.2.1	Fern Sporangium . . . . .	257
13.2.2	Design and Modeling . . . . .	258
13.2.3	Experimental Method . . . . .	264
13.2.4	Experimental Results . . . . .	265
13.3	Evaporation Driven Fluid Flow in Plants. . . . .	268
13.3.1	Transpiration in Plants and the Cohesion-Tension Theory . . . . .	269
13.3.2	Energy and Rate of Evaporation. . . . .	270
13.3.3	Synthetic Leaf Design. . . . .	270
13.3.4	Electrical Parameter Model . . . . .	271
13.3.5	Fabrication. . . . .	272
13.3.6	Testing Results: Evaporation Driven Flow. . . . .	273
13.3.7	Testing Results: Energy Scavenging Circuit. . . . .	273
13.3.8	Future Improvements . . . . .	275
13.4	Conclusion. . . . .	275
	References . . . . .	276
<b>14</b>	<b>Capillary Forces in Atomic Force Microscopy and Liquid Nanodispensing. . . . .</b>	<b>279</b>
14.1	Introduction . . . . .	279
14.2	Computation of Capillary Forces . . . . .	281
14.3	Capillary Forces in Atomic Force Microscopy . . . . .	283
14.3.1	Contact Mode . . . . .	284
14.3.2	Oscillating Modes. . . . .	286
14.4	Capillary Forces in Liquid Nanodispensing . . . . .	288
14.4.1	Experimental and Calculation Methods . . . . .	290
14.4.2	Examples of Capillary Force Curves. . . . .	292
14.4.3	Interpretation of Experimental Force Curves . . . . .	293
14.5	Conclusion. . . . .	301
	References . . . . .	302

**Part V Conclusions and Perspectives**

<b>15 Conclusions and Perspectives . . . . .</b>	<b>309</b>
15.1 Conclusions . . . . .	309
15.2 Current Trends . . . . .	310
15.3 Perspectives . . . . .	312
References . . . . .	313
