Part I Martin Grötschel—Activist in Optimization	
Martin Grötschel—The Early Years in Bonn and Augsburg	5
Michael Jünger and Gerhard Reinelt	
1 Introduction	5
2 Bonn	5
3 Augsburg	9
4 Conclusion	19
References	19
Part II Contribution by a Very Special Predecessor of Martin Grötschel	
Facets and Rank of Integer Polyhedra	23
Manfred W. Padberg	
1 Introduction	23
2 Normal Form and Classification of Facets	26
3 Irreducible Representations of Facets	30
4 Symmetry of Vertex Figures	31
5 Symmetry of Edge Figures	35
6 Rank of Facets and Integer Polyhedra	37
7 The Facial Structure of “Small” STS Polytopes	45
References	56
Part III Martin Grötschel’s Doctoral Descendants	
Martin Grötschel’s Descendants and Their Doctoral Theses 1983–2012	63
Michael Jünger and Gerhard Reinelt	
Part IV Contributions by Martin Grötschel’s Doctoral Descendants	
Constructing Extended Formulations from Reflection Relations	77
Volker Kaibel and Kanstantsin Pashkovich	
1 Introduction	77

2	Polyhedral Relations	80
3	Reflection Relations	87
4	Applications	89
4.1	Reflection Groups	89
4.2	Huffman Polytopes	94
5	Conclusions	99
	References	100
Mirror-Descent Methods in Mixed-Integer Convex Optimization		101
Michel Baes, Timm Oertel, Christian Wagner, and Robert Weismantel		
1	Introduction	101
2	An Algorithm Based on an “Improvement Oracle”	103
3	Two-Dimensional Integer Convex Optimization	109
3.1	Minimizing a Convex Function in Two Integer Variables . .	110
3.2	Finding the k -th Best Point	114
4	Extensions and Applications to the General Setting	120
4.1	Mixed-Integer Convex Problems with One Integer Variable	121
4.2	Mixed-Integer Convex Problems with Two Integer Variables	127
4.3	A Finite-Time Algorithm for Mixed-Integer Convex Optimization	129

Beyond Perfection: Computational Results for Superclasses		133
Arnaud Pêcher and Annegret K. Wagler		
1	Introduction	134
2	Beyond Perfection	138
2.1	On Computing the Clique Number	141
2.2	On Computing the Chromatic Number	146
2.3	On Computing the Circular-Clique and Circular-Chromatic Number	152
3	Extending the Theta Function to Larger Convex Sets of Matrices .	156
	References	160
From Vertex-Telecenters to Subtree-Telecenters		163
Zaw Win and Cho Kyi Than		
1	Introduction	163
2	Vertex-Centroids and Vertex-Telecenters of a Tree	164
3	Subtree-Centroids and Subtree-Telecenters of a Tree	166
4	A Characterization of Subtree-Telecenters	168
5	Relation Between Subtree-Centroids and Subtree-Telecenters . . .	171
5.1	A Solution Method for Finding a Subtree-Telecenter of a Given Tree	172
6	Conclusion	173
	References	173

Algorithms for Junctions in Acyclic Digraphs	175
Carlos Eduardo Ferreira and Álvaro Junio Pereira Franco	
1 Introduction	175
2 Concepts and Notation	176
3 Problem Definition, Literature Overview, and Main Results	178
4 Polynomial Time Algorithms for the <i>s</i> -Junction- <i>k</i> -Pairs Problem	179
5 An $O(m + k)$ Time Algorithm for the <i>s</i> -Junction- <i>k</i> -Pairs Problem	180
6 Algorithms	185
7 Experiments	190
8 Conclusion	192
References	193
Algorithms for Scheduling Sensors to Maximize Coverage Time	195
