

Contents

Part I Random Matrices

On the Limiting Spectral Density of Symmetric Random Matrices with Correlated Entries	3
Olga Friesen and Matthias Löwe	
Asymptotic Eigenvalue Distribution of Random Matrices and Free Stochastic Analysis	31
Roland Speicher	
Spacings: An Example for Universality in Random Matrix Theory	45
Thomas Kriecherbauer and Kristina Schubert	
Stein's Method and Central Limit Theorems for Haar Distributed Orthogonal Matrices: Some Recent Developments	73
Michael Stolz	

Part II Iterated Random Functions

Large Deviation Tail Estimates and Related Limit Laws for Stochastic Fixed Point Equations	91
Jeffrey F. Collamore and Anand N. Vidyashankar	
Homogeneity at Infinity of Stationary Solutions of Multivariate Affine Stochastic Recursions	119
Yves Guivarc'h and Émile Le Page	
On Solutions of the Affine Recursion and the Smoothing Transform in the Critical Case	137
Sara Brofferio, Dariusz Buraczewski, and Ewa Damek	
Power Laws on Weighted Branching Trees	159
Predrag R. Jelenković and Mariana Olvera-Cravioto	

The Smoothing Transform: A Review of Contraction Results	189
Gerold Alsmeyer	
Precise Tail Index of Fixed Points of the Two-Sided Smoothing Transform	229
Gerold Alsmeyer, Ewa Damek, and Sebastian Mentemeier	
Conditioned Random Walk in Weyl Chambers and Renewal Theory	253
C. Lecouvey, E. Lesigne, and M. Peigné	

Random Matrices and Iterated Random Functions

Münster, October 2011

Alsmeyer, G.; Löwe, M. (Eds.)

2013, VIII, 265 p., Hardcover

ISBN: 978-3-642-38805-7
