

# Contents

## Part I Fundamentals

- 1 Airborne Wind Energy: Basic Concepts and Physical Foundations . . .** 3  
Moritz Diehl
- 2 Traction Power Generation with Tethered Wings . . . . .** 23  
Roland Schmehl, Michael Noom, Rolf van der Vlugt
- 3 Pumping Cycle Kite Power . . . . .** 47  
Rolf H. Luchsinger
- 4 Efficiency of Traction Power Conversion Based on Crosswind Motion . . . . .** 65  
Ivan Argatov and Risto Silvennoinen
- 5 An Introduction to Meteorology for Airborne Wind Energy . . . . .** 81  
Cristina L. Archer
- 6 Kites: Pioneers of Atmospheric Research . . . . .** 95  
Werner Schmidt, William Anderson
- 7 Financing Strategies for Airborne Wind Energy . . . . .** 117  
Udo Zillmann, Sebastian Hach

## Part II System Modeling, Optimization and Control

- 8 Theory and Experimental Validation of a Simple Comprehensible Model of Tethered Kite Dynamics Used for Controller Design . . . . .** 141  
Michael Erhard, Hans Strauch
- 9 On Modeling, Filtering and Automatic Control of Flexible Tethered Wings for Airborne Wind Energy . . . . .** 167  
Lorenzo Fagiano, Aldo U. Zraggen, Manfred Morari
