<b>List of Abbreviations and Variables</b>	<b>xv</b>
<b>List of Figures</b>	<b>xxi</b>
<b>List of Tables</b>	<b>xxiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Objective of the study . . . . .	1
1.2 Current practices in government debt management . . . . .	2
1.2.1 The DMO perspective . . . . .	2
1.2.2 Government debt management objectives . . . . .	5
1.2.3 The debt management process . . . . .	8
1.2.4 Interactions to the macroeconomic framework . . . . .	12
1.2.4.1 Financial stability . . . . .	12
1.2.4.2 Fiscal policy . . . . .	14
1.2.4.3 Monetary policy . . . . .	15
1.3 Outline of the study . . . . .	18
<b>2 Is the standard micro portfolio approach to sovereign debt management still appropriate? A critical analysis of the underlying analytical framework</b>	<b>21</b>
2.1 Introduction . . . . .	21
2.2 The analytical roots of the standard micro portfolio approach . . . . .	23
2.3 Technical conditions underlying the micro portfolio strategy . . . . .	24
2.4 An extended analytical financing framework and associated cost measures . . . . .	26
2.4.1 Terms and definitions . . . . .	27
2.4.2 Decisions under certainty . . . . .	28
2.4.3 Decisions under uncertainty and risk . . . . .	30
2.4.4 Limitations of the standard micro portfolio approach . . . . .	33
2.4.5 Introduction of a broader cost measure . . . . .	34
2.4.6 An illustrative numerical example . . . . .	35
2.5 Empirical validity of technical assumptions of the standard approach . . . . .	38
2.5.1 Evaluation of assumptions under normal conditions (World 1) . . . . .	38
2.5.2 Evaluation of assumptions under crisis conditions (World 2) . . . . .	39
2.6 Concluding remarks . . . . .	41
2.7 Acknowledgements . . . . .	42
<b>3 From corporate to public finance: A new application of the capital budgeting approach to sovereign debt management</b>	<b>43</b>
3.1 Introduction . . . . .	43
3.2 Adapting the capital investment methodology to the DMO context . . . . .	45
3.2.1 Analytical framework: basic concepts and assumptions . . . . .	46
3.2.2 Applicability of the capital budgeting approach for DMOs . . . . .	48

3.2.2.1	Organization and operational autonomy of DMOs . . . . .	48
3.2.2.2	Private vs. public sector . . . . .	49
3.2.2.3	Price taker vs. price maker . . . . .	52
3.3	A public finance framework for long-term sovereign funding decisions . . .	53
3.3.1	An extended approach . . . . .	54
3.3.2	Remarks to modeling the term structure dynamics . . . . .	57
3.3.3	Managing uncertain economic assumptions . . . . .	60
3.3.4	Links to fiscal stability and sustainability . . . . .	63
3.4	Recommendations for broader debt management objectives . . . . .	65
3.4.1	Comparison to currently discussed approaches . . . . .	65
3.4.2	Accountability aspects and debt management objectives . . . . .	68
3.5	Concluding remarks . . . . .	70
<b>4</b>	<b>Use of orthogonal polynomials to describe the shape and dynamics of the term structure of interest rates for the purpose of government debt management</b>	<b>73</b>
4.1	Introduction . . . . .	73
4.2	Discussion of existing empirical term structure models . . . . .	75
4.3	An approach based on orthonormalized Legendre polynomials . . . . .	77
4.4	Empirical results for the term structure estimation . . . . .	81
4.4.1	Data and estimation procedure . . . . .	82
4.4.2	Sensitivity of the time scale parameter $\alpha$ on the yield curve fit . . .	85
4.4.3	Goodness-of-fit statistics (individual parameter models) . . . . .	86
4.4.4	Statistical efficiency (individual parameter models) . . . . .	90
4.4.5	Determination of pricing errors (seven-factor models) . . . . .	94
4.4.6	Yield curve coefficient statistics (seven-factor Legendre model) . . .	97
4.5	Summary and concluding remarks . . . . .	102
<b>Appendix</b>		<b>106</b>
A.1	Mathematical derivation of the orthogonal basis functions . . . . .	106
A.2	Exemplary estimation plots (seven-factor Legendre model) . . . . .	108
A.3	Development of bid-ask spreads . . . . .	110
<b>5</b>	<b>Stochastic modeling of the term structure dynamics for the purpose of long-term government debt management: The theoretical framework</b>	<b>113</b>
5.1	Introduction . . . . .	113
5.2	General conditions and assumptions . . . . .	115
5.3	Discussion of related work . . . . .	117
5.4	A dynamic approach based on Legendre polynomials . . . . .	118
5.4.1	The general approach . . . . .	118
5.4.2	The parameter model . . . . .	119
5.4.3	Description of the term structure dynamics . . . . .	120
5.4.3.1	Drift-free forward interest rate process . . . . .	121
5.4.3.2	Introduction of risk premia . . . . .	122
5.4.3.3	A stochastic framework . . . . .	124
5.4.3.4	An extended framework to account for inflation . . . . .	126
5.4.4	Discussion of the underlying model assumptions . . . . .	128
5.4.4.1	Specification of the volatility of the forward rate process . . . . .	128
5.4.4.2	Assumption of constant risk premia . . . . .	128

5.5	Results from the model implementation . . . . .	129
5.5.1	Historical data and estimation procedure . . . . .	130
5.5.2	Estimation of yield curve factors (coefficient dynamics) . . . . .	131
5.5.3	Estimation of risk premia . . . . .	132
5.5.3.1	Parameter estimation . . . . .	132
5.5.3.2	Results for the long-term forward curve . . . . .	133
5.5.3.3	Examination of model assumptions . . . . .	136
5.5.4	Estimation of volatilities and correlations . . . . .	139
5.5.4.1	Parameter estimation . . . . .	139
5.5.4.2	Examination of model assumptions . . . . .	141
5.6	Summary and concluding remarks . . . . .	145
<b>Appendix</b>		<b>148</b>
A.1	Coefficient dynamics under the pure expectations hypothesis . . . . .	148
A.2	Decomposition of the nominal term premium (per year) . . . . .	150
A.3	Results for the covariance matrix (daily vs. monthly changes) . . . . .	151
<b>6</b>	<b>Joint modeling of yield curve shape and dynamics: An empirical validation of term structure simulations for long-term government debt management</b>	<b>153</b>
6.1	Introduction . . . . .	153
6.2	Requirements imposed by government debt management . . . . .	155
6.3	Recapitulation of the dynamic term structure approach . . . . .	156
6.3.1	General conditions and assumptions . . . . .	156
6.3.2	The Legendre parameter model . . . . .	158
6.3.3	The stochastic framework . . . . .	159
6.4	Empirical Results for the term structure dynamics . . . . .	162
6.4.1	Historical data and estimation procedure . . . . .	162
6.4.2	Historical empirics of the yield curve . . . . .	163
6.4.3	Results from the term structure simulation . . . . .	171
6.5	Portfolio exercise . . . . .	178
6.5.1	Portfolio evaluation set-up . . . . .	178
6.5.2	Analysis of expected cost differences . . . . .	179
6.5.3	Cost and risk study . . . . .	180
6.6	Summary and concluding remarks . . . . .	184
<b>Appendix</b>		<b>187</b>
A.1	Exemplary estimation plots (five-factor Legendre model) . . . . .	187
A.2	Estimated forward rate coefficients . . . . .	189
A.3	Exemplary simulation plots (five-factor Legendre model) . . . . .	190
A.4	Simulated borrowing costs (including risk premia) . . . . .	193
<b>Bibliography</b>		<b>195</b>

Introduction of a New Conceptual Framework for  
Government Debt Management  
With a Special Emphasis on Modeling the Term  
Structure Dynamics

Hubig, A.

2013, XXIV, 213 p. 45 illus., Softcover

ISBN: 978-3-658-00917-5
