

## Preface

The following thesis is a result of a cooperation from 2010 to 2012 between the Otto-Friedrich University, Bamberg, the Friedrich-Alexander University Erlangen, Nuremberg, as well as the IMD in Lausanne. Numerous people, whom I wish to thank in the following, supported me in one way or another and helped me to achieve success with this “project,” which was certainly one of the most exciting, educational and enjoyable ones of my career.

Foremost, I wish to thank Prof. Dr. Björn Ivens for his mentorship of this thesis, for his constant openness to new ideas and his unwavering optimism throughout its development. I owe my gratitude to Prof. Dr. Albrecht Enders for numerous constructive discussions and suggestions whether in Lausanne, San Antonio, or at the Munich Sailing School. A special thank you to Dr. Andreas König, who animated my interest in “technological discontinuity”, who, in numerous conversations emphasized what is paramount in scientific papers and publications, and whose creativity and erudition will remain a guiding influence for me.

Thank you to Prof. Dr. Christoph Bläsi for his collaboration and support in the execution of case studies in German publishing, especially for his assistance in establishing contact to interviewees and his valuable insights on “the industry” and the operations of publishing houses.

Furthermore, I wish to thank my former diploma graduates, Barbara Schillo, Kilian Bornschein, Matthias Eck and Benjamin Giebler, as well as both my Master's graduates at the University of Mainz, Kristina Rubel and Ruth Speil, for accompanying me to numerous interviews and for serving as coding partners.

A lot of gratitude goes to the numerous companies, experts and management teams, who devoted their time in anonymous interviews, and without whose candid participation in these interviews a significant part of this thesis would not have been possible.

I also wish to thank various (anonymous) reviewers and conference participants (e.g., FERC and Doctoral Consortium 2011 in Grand Rapids and in Montreal in 2012; EIASM, 2011 in Witten; AOM 2011 in San Antonio; The annual convention of the Internationale Buchwissenschaftliche Gesellschaft, Mainz 2011; AOM 2012 in Boston), for commenting on the preliminary versions of some excerpts of this thesis and for their countless constructive remarks.

## VIII

Moreover, I wish to thank my (internal and external) fellow PhD students at Bamberg University, my McKinsey Fellow colleagues in Munich, as well as the team at the Center for Family Business at the St. Gallen University for their diverse field and non-field discussions, diversions and practical tips.

In conclusion, I wish to thank my family, especially my husband, Friedrich, my son, Jonathan, and my parents for their infinite patience, their constant encouragement and their invigorating spontaneity.
