

Acknowledgments

First and foremost, I would like to express my gratitude to my supervisor and great mentor Professor Sorin A. Huss. I have been amazingly fortunate to have an advisor, who gave me the freedom to explore different exciting ideas at once, while always guiding me with the right scientific advice. I appreciate his openness especially for unconventional ideas and for giving my work direction. He has always been available to advise and to support me during my studies.

I am glad to have won Professor Frank Kargl as a further referee. He is considered to be a leading expert in the field of ITS security and privacy and I enjoyed working with him on a secure and privacy-friendly C2X communication within the Car2Car Communication Consortium. Thanks for his interest and agreement to supervise this work.

The financial support of the Adam Opel AG is gratefully acknowledged, and I would like to thank my colleagues at the Advanced Engineering Department for their continuous support during the last four years. Special thanks go to Harald Berninger and Steffen Knapp for reviewing parts of this thesis and for giving me great feedback during my studies. Further thanks go to Bernd Büchs for being a helping hand during the experimentation phase and for providing me with the latest Dilbert strips every morning.

I am very thankful to Professor Katzenbeisser and the Security Engineering Group at CASED Darmstadt for giving me advice on appropriate verification methods and tools, which was very helpful to round off this work.

Another group of people I would like to thank are the members of the Working Group Security of the Car2Car Communication Consortium. It was a true pleasure working with each of you, and I am especially thankful for the very constructive and always friendly working spirit inside our Task Force PKI. I am sure that our work bears fruit and this exciting Car2Car technology will become reality in the coming years.

Moreover I wanted to thank Jonas Firl and Attila Jaeger for the inspiring discussions we had, including, but not limited to technical and academical issues only. Thank you for at least trying to debate and solve all the world's largest political and economical problems at once. I enjoyed our little talks and it was always a pleasure working with you. Besides that, thanks for the excellent review of this work.

Thanks to Professor Abdulhadi Shoufan for improving my academic writing skills and for being a personal role model to me over the years. Further thanks go to Tom Assmuth, Alexander Biedermann, Gregor Molter, Maria Tiedemann, and Marc Stöttinger. You brightened up my university stays during the week. At Opel this part belongs to my Ph.D. colleagues Gerald Schmidt, Thomas Schramm, Oliver Jung, Rami Zarife and Thomas Streubel. Thanks to you all.

I owe my loving thanks to my enchanting girlfriend Kathrin, my brother, my grandparents, my aunts, my uncles, and my cousins, which have all been a constant source of love, support and strength all these years. Without their encouragement and understanding it would have been impossible for me to finish this work.

Lastly, and most importantly, I wish to thank my parents, Brigitte and Hartmut Stübing. To them I dedicate this thesis.

Besten Dank! May you all benefit from a secure and privacy-friendly Car2Car Communication in the near future!

Multilayered Security and Privacy Protection in Car-to-X
Networks

Solutions from Application down to Physical Layer
