

Contents

1	Introduction	1
1.1	Introduction	1
	References	5
2	Development of HB Donor Catalysts	7
2.1	Development and Properties of Novel HB Donor Catalysts	7
2.1.1	Introduction and Background	7
2.1.2	Results and Discussion	10
2.1.3	Experimental Section	15
2.2	Asymmetric Michael Addition to α,β -Unsaturated Imides Catalyzed by HB Donors	20
2.2.1	Introduction and Background	20
2.2.2	Results and Discussion	21
2.2.3	Experimental Section	29
2.3	Asymmetric Hydrazination of Activated Methylene Compounds Catalyzed by HB Donors	41
2.3.1	Introduction and Background	41
2.3.2	Results and Discussion	43
2.3.3	Experimental Section	46
	References	47
3	Development of Hydroxy Thiourea Catalysts	51
3.1	Asymmetric Michael Addition of γ -Hydroxyenones and Alkenylboronic Acids	51
3.1.1	Introduction and Background	51
3.1.2	Results and Discussion	54
3.1.3	Experimental Section	60

3.2 Asymmetric Petasis Reaction of <i>N</i> -aryl- α -Iminoamides and Alkenylboronates.	69
3.2.1 Introduction and Background	69
3.2.2 Results and Discussion	73
3.2.3 Experimental Section.	81
References	102
4 Conclusion.	105
Curriculum Vitae	107

Development of Novel Hydrogen-Bond Donor Catalysts

Inokuma, T.

2013, XIV, 107 p., Hardcover

ISBN: 978-4-431-54230-8
